Subject: Public Consultation

You don't often get email from [REDACTED] [Learn why this is important](#)

Hi Caroline,

I am an IT Security Engineer for over 20 years now and thought I'd outline my views briefly in regards the online safety code.

Within your document you have outlined the word "platform" 244 times and "service" 574 times – this is the main crux of the problem in regards oversight and enforcement.

I don't see anywhere within the document where "platform" is actually defined as opposed to "product".

In my opinion X (Twitter), Facebook, WhatsApp, Snap, Instagram etc. are all products and not platforms. Amazon Shopping, Just Eat, Carzone, Ebay etc. are all platforms.

If we can define those social media sites as products then standard rules apply and they become much easier to manage from an oversight point of view.

So we have a product like baby food – if this contains any type of contaminant it would immediately be acted on, removed from shelves and recalled. Twitter for example, is no different except that within its virtual product walls it contains massive amounts of toxic content that is harmful to humans. Also, the baby food manufacturer has massive amounts of work to do in regards public safety before the product reaches the shelves – this is not the same for the social media products. It is the oversight and enforcement before the fact that is the key.

Just like baby food where you buy it in a shop – it is the same for these social media products where you get them in a "Store" when we are talking about the most invasive side of things which is the Apps on phones. Even if it was the Apps and not the websites we defined as products then that would reduce the problem greatly.

In a nutshell, we as a society need to define what we now understand as a product and a platform and once that is done we will be on the right track. Until then we will go in circles as we have done for the last 20 years and have no impact on the problem.

Regards,

Diarmuid

Subject: Online Media Safety Submission

[You don't often get email from [REDACTED] Learn why this is important at <https://aka.ms/LearnAboutSenderIdentification>]

I believe we will never have any effective weapon to help us control social media until the providers and the individuals submitting information are made by law to own the data. Providers can turn a blind eye to any pressure as long as they have no responsibility for data accuracy or content in terms of legal acceptability

I submit screenshots from thehill.com website showing Wikipedia founder Larry Sanger' s view which would be a significant step forward is sharing legal responsibility.

Wikipedia co-founder Larry Sanger recently called for a social media boycott, to compel social media platforms to give users ownership of their data. Policymakers are also considering regulating Google, Facebook and other social media platforms in order to protect individual user data. Meanwhile, disinformation and hate speech continue to spread on social media, raising the possibility of a different sort of regulation.

These actions raise thorny questions, including the question: Who owns our data? Information such as our online media consumption habits, members of our social networks and our political leanings and affiliations? Many argue that these data should be treated as our own individual private property.

THE HILL

This is the wrong way to think about user data. Instead, we should view user data as a public resource, akin to the broadcast spectrum. The spectrum broadcasters use is “owned by the people.” It is governed so as to assure that the select few who have the privilege to access the spectrum serve the public interest.

User data, in its aggregate form, can — and should — be treated similarly, as a public resource. Just as broadcasters built their businesses on the collectively owned spectrum, social media platforms built their businesses on our data, data that are best thought of as being collectively owned.

This approach makes sense for several reasons. First, the real value in user data only emerges through large aggregations, which allow predictive analytics and behavioral targeting. Individually, a person’s data gleaned from a social media platform may be worth about \$5 a month. Collectively, such data are incredibly valuable.

Second, practical challenges — and

Subject: Online Safety Code in Ireland: Safeguarding Freedom in the Digital Era

You don't often get email from [REDACTED]

[Learn why this is important](#)

Dear Laura Forsythe,

I trust this message finds you in good health. I am reaching out to you with a sense of urgency and deep concern regarding the proposed Online Safety Code by Coimisúin na Meán and the wider regulatory framework set to be enforced in Ireland from February next year.

While the purported aim is to shield users from harmful content on social media, it is becoming increasingly evident that the potential consequences of these regulations extend far beyond safeguarding. The sweeping powers granted to the media regulator to impose exorbitant fines of up to €20 million or 6% of a company's national turnover for non-compliance represent a severe threat to the principles of freedom and open discourse.

This proposed code sets a dangerous precedent, echoing authoritarian regimes that seek to control and manipulate information to their advantage. By allowing such substantial punitive measures, we risk entering an era where dissenting voices are silenced, critical opinions are stifled, and the vibrant tapestry of diverse perspectives on social media is replaced with a monotonous narrative dictated by those in power.

The broad spectrum of content that platforms are mandated to police, from cyberbullying to incitement to hatred, raises profound concerns about the potential for overreach. The vagueness in defining harmful content creates an environment ripe for subjective interpretation, potentially leading to the suppression of legitimate expressions of dissent, activism, and unpopular but crucial viewpoints.

Moreover, the imposition of age verification requirements and media literacy tools, while ostensibly aimed at protecting the vulnerable, could inadvertently lead to unwarranted surveillance and an erosion of privacy. The heavy-handed approach risks undermining the autonomy of users and further concentrates power in the hands of regulators.

As someone who values the principles of democracy, individual freedoms, and open dialogue, I implore you to voice your opposition to these regulations during the public consultation. This is a critical moment to stand up for the rights of individuals and the sanctity of diverse opinions in the digital age.

Thank you for your attention to this matter. Your voice and advocacy are essential in challenging the potential erosion of freedoms in the online space.

Sincerely,

Liam McMonagle.

Subject: Public consultation

[You don't often get email from [REDACTED] Learn why this is important at <https://aka.ms/LearnAboutSenderIdentification>]

To whom it may concern,

My name is Declan ward and I have taken my time out to respond to this public consultation and my concerns about the government overreach in place here. Free speech and free expression is the cornerstones of any well running democracy. It seems that we as a country have forgotten what it's like as a nation and people to have no voice and to be silenced. I am very uncomfortable with these new acts of government and I will say we are headed rudderless into a sea of tyranny. I do not support this and think it is wrong.

Subject: Draft Online Safety Code Public consultation-

You don't often get email from [REDACTED]

[Learn why this is important](#)

[REDACTED]

Caroline Keville
Coimisiún na Meán,
One Shelbourne Building,
Shelbourne Road,
Dublin 4.

Dear Caroline (Ms. Keville) & Minister Catherine Martin TD.

There is an issue with the promotion of this consultation for the public on CnaM website and the format in which it is presented to a diverse and time challenged public which ought to have been considered. It is in this context I have copied you in order to maximise the value and reach of public consultations not alone to this statutory body whose functions are key to society, that of media but also to other public consultations concerning the public that they will be easily accessible and convenient, and can be saved as a document submission for ease of access for consultation staff.

I am supportive of and agree with the appropriateness of the draft code in 1-27. My concerns are detailed in relation to 28 are indicated here. Hopefully the draft code when implemented will mitigate most of these by the change platforms will have to make, but any deficiencies in algorithm need to link its processes that mitigate against the effects of cyberbullying and the potential for harm and suicide in particular. I advocated such processes in the Bill upon which CnaM was established but these seem to have not been considered.

This consultation is an opportunity to revisit that exclusion of effective processes in circumstances where platforms algorithms are being adjusted or have technical deficiencies?

I am referring to reporting processes for affected children and adults of cyberbullying not just advisory volunteers but trained therapists such as [betterhelp.com](https://www.betterhelp.com) that are more skilled than merely volunteering counselling of organisations like Samaritans that can be for the first time funded by the platform operator or a levy on them to fund same. . This might be considered beyond what would be expected but goes to the heart of the value of human life in technology platform providers in offers a platform for users to engage, and those cases may not be common but such a mechanism has the potential to be transformative and life preserving. Positive mental health content should be promoted on platforms for the benefit of the users at large. I do not see sufficient positive measures. The main focus seems to be on negative prevention which is important but insufficient on its own.

I find it disappointing that a public consultation is not prominently promoted as a banner on the website. Can you indicate what was the intention of that to make finding this survey more difficult and text based?

Was there a serious effort to have a sufficient public response? Yes, it was advertised on Radio. So is this an IT issue? I understand you are a new organisation from a staffing point of view, however this is I understand one of your first public consultations in an enhanced new role? Is this the tone you wish to present to the public and industry? This is a very key public consultation of importance to society.

Who is this consultation aimed at? Of course interest groups are important but the taxpayer that funds government is the public. Therefore it is in the interests of the public that public consultations be made as easy as possible for the diversity of members of the public.

How is this achieved?. It may be convenient to put everything into 1 document for CnaM however Is this the most user friendly way. In one word No.it is rather academic and off-putting given the diversity of the public demographic., time availability.

I am not being critical for the sake of it, I am offering feedback as a member of the public, and what my expectations are in the digital age of government bodies across all departments that engage the public ? Positive examples of public consultations can be found at the Behaviour and Attitudes Survey: <https://www.rte.ie/eile/2023/1113/1416288-a-new-direction-for-rte/> based on a consultation document. That approach has particular benefits in terms of collation of feedback, ease of use and so forth. SurveyMonkey, google forms and so forth offer CnaM the ability to carry out the public consultation in house using such consultation platforms.

Another option is via consultation feedback workbook like with Adobe Acrobat, Microsoft Word and other such text document based software that for each section comments can be left but can have brevity limitations as to number of characters. At each section additional feedback can be left. What may be helpful is to break each section into document sections so that there is not too much scrolling required. It is disappointing that CnaM chose not to consider their use to align their objective to engage the public as much as possible in the consideration of this draft code. I do feel that the online survey option has benefits over attachment submissions in its data collation.

In this respect I am provided with a 90 odd page document like a book. This is not a report per say it is a public consultation. In this regard I feel your consultation IS NOT public friendly. It would therefore seem you missed your main target audience and am making it more challenging to respond to the survey to what end does that serve?

Where the the document section jump to hyperlinks within the document for ease of navigation?

I would suggest adjusting your approach in future consultations to easily address this issue given the public's time constraints within their own working lives in many cases or family commitments, in order to maximise reach with your important work for society . To ensure this feedback may be taken on board, I have directly copied in this public consultation design obstacle to your responsible Department of Tourism, Culture, Arts, Gaeltacht, Sport & Media in the hopes it will be rectified.

Comment on Section 1- 9 of the Draft Code:]

The approach seems to take a similar approach to the regulation of society in general in terms of legislative policy of deterrence. This is a traditional ideological approach to society based on traditional intellectual logic.. Yes it is a necessary component of society to deal with harm for bad actors using deterrence mechanisms. while the code seems to for a change have prevention objectives I don't see any processes in place

where platform operators fail to implement these technically due to unexpected challenges. And in those instances, what is changing in the approach? Intervention seems to be purely law enforcement. What psychology and neurology sources were invited in the draft code design?

I have asked this previously of the organisation you are successor to the BAI what are the preventative measures. Indeed I made a submission to the Oireachtas Committee on Media/Culture as to what are the prevention during the passage of the Act upon which you were established and what, mental health regulations and obligations placed on broadcasters and indeed on social media platforms, it can be expanded to? The response was a vague community good code of conduct but no mental health input from the Department of Health. This was somewhat indicative of a mindset bias based on a deterrence only ideology that lacked fresh adaptive approach to the technologies that are younger than that ideology in public policy on media .

What research has the Commissioned with regards to the mix of broadcast and video content with eminent neuroscience and psychology researchers in the university sector? If not why not on what basis were they not consulted? Legislative exclusion from consideration?

Does the regulator see its role as strictly enforcement or has it have a mental health positive role in terms of content providers to require a % of positive content promotion on platforms? if so, why or why not?

It is more widely known in more recent times that the non academic subconscious logic plays a key role in the regulation of emotion and how people feel, react to content, in particular to so called "fictional violence"- so called drama. What research has the Commission done as to the effects of crime and violence drama on wellbeing in particular in media? If not, does it intend to do so? Does it intend to add contextualisation requirements pre-broadcast/streaming that are not just textual but meaningful, not just support contacts but proper contextualisation.conscious of the diversity of audience despite the age classification in place.

If this is not being done there is an obvious need to input in the functions of the Department of Health within your regulation of content and the provision of its expertise to you as content regulator purely from a community wellness point of view. Again this may be legislatively outside the CnaM functions simply because it is not within the legislation upon which it has legislative responsibility governing its responsibilities.

If you believe that is not within your legislative competency, I understand you have no legislative competence to regulate from a mental wellness perspective, then this is something you should indicate in response so it can be raised with the the Minister Catherine Martin TD as to the government's commitment to community wellness and to consider setting in place input from her colleague MInister Stephen Donnelly TD Health Minister and his colleagues with the HSE in the responsible area and amend legislation so as to place the mental health wellness promotion on platform providers, both online and broadcast.

Turning to the consultation.

On page 14 misogyny is rightly mentioned. While it may not be common there is the potential for misandry. Both of these should be included as being undesirable. There is most definitely a need to promote positive masculinity and femininity as complementary and similar on platforms simply because media has a cultural trend influence. TV is an example of this. .

Again there is an avoidance approach but there does not appear to be a positive promotion approach of the desirable attributes of social media. This may be the role of government. But one subconscious energetic law in psychology does hold, if you people focus on what they don't want, there is a tendency in the brain to attract more of what one DOES NOT WANT. That is simply the law of Attraction upon which human interaction is based which has more recently become proven in more recent neuroscience research apparently, to which there was scepticism previously, prior to the brain imaging studies during cognitive behaviour. . See:

<https://neurosciencenews.com/physics-consciousness-21222/>

https://www.researchgate.net/figure/The-brain-and-the-universe-share-similar-physical-laws-where-physical-interaction-defines_fig1_215779558

and <https://theocbookgirl.com/2019/10/31/book-review-the-source-by-tara-swart-the-source-the-book-tours-harperonebooks-and-drtaraswart/> (Dr. Tara Swart Bieber has practised as a psychiatrist and is a neuroscientist, medical doctor and senior lecturer at MIT Sloan

In section 3.4.2 Reporting and Flagging, what measures that help after reporting mechanisms are initiated on the part of the platform such as available therapist to assist the user including content the affected person can watch to help them overcome the trauma caused ie mp3s downloadable?

I generally agree that Section 1 to 27 are adequate because they are contextually intelligent approaches. I do think that algorithms will need to be adjusted to take into account the code. Therefore similar to the Data Commissioner I think consideration should be given to beta platform changes that CnaM can test to identify and algorithmic issues and that among these, experts in the fields of neuroscience and psychology and psychiatry are among those the CnaM can require to test the beta versions of the changes before the changes are passed by the regulator as fit for purpose and then released to the public at large.

I have no problem with any of this email available for public review and indeed to contact and engage with me.

Whilst I do not have expertise academically, am not a parent as yet, I have previously qualified in hypnotherapy and NLP and look to experts in the field such as Dr. Daniel Amen , USA, Dr. Tara Swart Bieber PhD, Dr. Gabor Mate Canada , to Andrew Huberman PhD, Dr Chris Palmer USA and there is no doubt that children and teenage trauma play a crucial role in adult lives and the current state of broadcast and social media is NOT conducive to positive mental and dietary and physical health and it is in this context that the role of CnaM is positive indication that government at least in Ireland finally gets it and by the European Commission and Parliament and that much more prevention needs to be promoted more actively by between Minister Martin's and Minister Donnelly's Departments that are mutually beneficial to society . .

I personally take my online interactions seriously and seek to avoid offence and conflict, to separate contrary viewpoints to me from the value of the person above opinion in the pursuit of harmony and unity. in my interactions with other users on social media. In this regard i believe RTÉ is deficient in reliant on a narrow Audience Council rather than a more regular content based survey approach quarterly and would be interested to see how the CnaM sees its role in public broadcast service content reforms in terms of the support of positive mental health in programming and contextualisation deficiencies or if the legislation is silent on this and is therefore outside its scope under the current legislation?.

Thank you for this opportunity to give my views.

Kind Regards

Seo O'Cathain

Subject: Online safety code bill (Laura Forsythe)

You don't often get email from [REDACTED]. [Learn why this is important](#)

Dear Laura forsythe,

I am writing to submit my response to the online safety bill that is being discussed.

I would just like to say, why is the Irish government wanting to restrict free speech. This is not what any free Republic would do to its people.

I do not agree and with this and it will restrict free speech. First they want to bring in the hate speech Bill and now this, what crazy country do we live in where this is even being discussed?

The government wants completely to control social media and this is evident with this bill they are pushing forward. If the hate speech comes in and this, it will effectively destroy free speech in Ireland.

Regards,

Brid.

Online Safety and Media Regulation Act 2022

Consultation Document: Online Safety

Email: vspsregulation@cnam.ie

Contact person: Caroline Keville

Consultation Questions:

1. Do you have any comments on sections 1 - 9 of the draft Code?

I suggest the inclusion of specific, measurable metrics for evaluating the effectiveness of the regulation. Terms like "robust" and "effective" should be quantified with clear criteria.

2. What is your view on the proposal to include user-generated content that is indissociable from user-generated videos in the definition of content to be covered by the Code?

I totally agree. Any content uploaded by users should be included under the code. I'd even propose to include **LINKS** to URLs containing harmful content. Studies show that in many cases, platforms are serving as gateways to less moderated platforms where harmful content is being shared. If Links, and not just "classic" content such as text, images and videos, are included under the umbrella of UGC, a lot of harm can be saved.

3. What is your view on the definitions of “illegal content harmful to children” and “regulated content harmful to children”?

Under “regulated content harmful for children” I suggest including also:

- Conspiracy theories that children may be susceptible to, like environment denialism or other political conspiracy theories (think the great replacement, depopulation, anti vaxx etc)
- Grooming
- Radicalization
- Doxxing
- Hate speech

I suggest looking at the World Economic Forum’s typology of online harms for a more comprehensive view on the subject:

https://www3.weforum.org/docs/WEF_Typology_of_Online_Harms_2023.pdf

4. What is your view on the other definitions of illegal content and regulated content?

I think the term “regulated content” can be confusing for the below reasons:

- a. It may be correlated with regulated products like alcohol and tobacco, while the context in the code is all the harmful content that is legal..
- b. A confusion can arise because the boundaries of these categories can vary significantly based on jurisdiction, like hate speech of holocaust denial. What is considered regulated content in one country might be illegal in another. My suggestion is to call it simply “legal but harmful”

8. What is your view on the requirements in the draft Code in relation to reporting and flagging of content?

“They must also set targets with respect to reporting and flagging mechanisms, and regularly evaluate and report to Coimisiún na Meán on performance against those targets.”
→ I suggest setting expectations for these targets, in order to create an industry standard and alignment.

I also suggest asking platforms to report on related metrics like rates of user flags being enforced against (for example: 90% of user flags were removed) This will signal that the platform policies are clear. If the rates are significantly low, it may suggest that users do not understand the policies correctly and they may need to be clarified or changed.

I also propose effectiveness metrics, such as the accuracy rate of age verification processes.

9. What is your view on the requirements in the draft Code in relation to age verification?

You should add an assessment for privacy implications, not just effectiveness.

10. What is your view on the requirements in the draft Code in relation to content rating?

I like this idea, I just wonder if this feature should be available for all pieces of content or only for content that is preliminary marked as content for children. This is based on the assumption that most platforms have algorithms that filter content based on the user's age.

11. What is your view on the requirements in the draft Code in relation to parental controls?

My concern here is with regard to parental control over **consuming** video streaming (I'm fine with controlling the ability of the kid to livestream, based on many cases of self-generated CSAM). If parents block their kids from consuming videos, it may violate kids' rights to explore topics that may not align with their parents beliefs, even if they are legitimate for the kids emotional and intellectual development (for example: LGBTQ content, religious topics)

12. What is your view on the requirements in the draft Code in relation to complaints?

“handle complaints effectively and diligently” : Video-sharing platform service providers shall handle complaints in a diligent, timely, nondiscriminatory, and effective manner. → how do you define effective? I propose to set clear metrics around it.

18. What is your view on the requirements in the draft Code in relation to media literacy measures?

It makes sense. Despite the early stage you're in, I think that links to some relevant resources of media literacy - even if they are not yours - may be helpful. Later on you can add your own resources of course.

19. What is your view on the requirements in the draft Code in relation to ensuring the personal data of children is not processed for commercial purposes?

It's critical. Good that you added it.

20. What is your view on the requirements in the draft Code in relation to reporting in relation to complaints?

I propose to list suggested parameters of reporting, such as numbers of complaints handled in a cadence, what was the percentage of complaints being enforced, what was the average time from reporting to closing the issue etc.

[Online Safety and Media Regulation Act 2022](#)

[Full act in one page](#)

[Online Safety Code Consultation document](#)

[Call for Inputs](#)

<https://www.cnam.ie/>

[Work program](#)

Public consultation

Introduction and context:

Approximately 6% of Ireland's workforce is employed in farming yet year on year, 50% of all workplace fatalities, to date in 2023 there are 32 workplace fatalities; 16 of these are in agriculture.

A farm is considered the most dangerous workplace but for the 137,500 farm families working on farms, it is also their home.

About AgriKids:

AgriKids is a farm safety educational platform for children. Founded in 2015, the ethos is to engage, educate and empower children to be farm safety ambassadors.

To that end we have created resources and programmes to assist children, their families, their teachers and communities to create better understanding and ultimately changing a culture that has contributed to Irish farms being the most dangerous of workplaces.

More: www.agrikids.ie

How this draft Code can assist farm safety awareness and behavioural change

AgriKids has created a draft 'Farm Safety Media Charter', which is awaiting finalisation and once launched will seek to assist and support media in the circulation and publishing of content that is in line with farm safety practices and behaviours. It will be launched through our partners in the 'Farm Safety Partnership Advisory Committee', (FSPAC), who are an advisory committee to the Board of the Health and Safety Authority (HSA) and are looking to send in a separate submission. AgriKids sits on the sub-committee concerned with 'Vulnerable Persons' (notably children and older farmers >65yrs)

More: www.fsmc.ie (Draft version only not for public dissemination)

Online and social media platforms will also be included in these guidelines, however monitoring the latter will prove difficult. That is where we see this draft Code as an ideal way to include measures that promote best practice in terms of farm safety practice and behaviour.

By assisting and nurturing public safety and wellbeing in helping to reduce and the volume of published content that seeks to jeopardise and undermine the safety of farm and rural communities by contributing to harmful behaviours and actions.

We have provided some feedback to the list of question posted in the consultation document we are taking it from the viewpoint of an agricultural setting but dangerous behaviour could also extend to other areas and situations.

Consultation Document review

1. Do you have any comments on sections 1 - 9 of the draft Code?

The list of protective measures identified in this draft Code are relevant and pertinent to the array of online dangers that our children are exposed to. However it would be welcomed if the dangers mentioned here:

3.1. The purpose of the Code is to ensure, pursuant to Section 139K of the Act, that video-sharing platform service providers:

- take appropriate measures to minimise the availability of harmful online content and risks arising from the availability of and exposure to such content;

- take any other measures that are appropriate to protect users of their services from harmful online content;

- illegal content harmful to the general public,

Could also include video and imagery displaying dangerous actions and behaviours relevant to farm life (and other) that could incite or incline viewers to replicate and copy.

For example:

- Underaged persons using farming machinery;
- Misuse of farm vehicles and farm machinery,
- Dangerous driving,
- Not taking due care when handling machinery;
- Dangerous handling of animals, farm livestock, etc;
- Not taking due care when in proximity of animals

2. What is your view on the proposal to include user-generated content that is indissociable from user-generated videos in the definition of content to be covered by the Code?

Agree - images, voice recordings can also be harmful when consumed / viewed by children or general public.

3. What is your view on the definitions of “illegal content harmful to children” and “regulated content harmful to children”?

The definitions and separation of the two are welcomed but do need some additional clarity on what their differences are and examples of each.

4. What is your view on the other definitions of illegal content and regulated content?

The assumption is being made that this question refers to the 'general public'. If this is the case, this must be broadened to include more examples of harm outside of the incitement, terrorism, xenophobia, etc. Look also to include dangerous behaviour which can encourage viewers to replicate and copy. We must also be mindful and inclusive of those members of society with intellectual disabilities; their age states they are adult but their cognitive abilities are not.

5. Do you have any comments on any other definitions provided in the draft Code?

No

6. What is your view on the obligations in the draft Code that relate to what a VSPS provider must include in its terms and conditions?

Coimisiún na Meán considers that content which poses a risk to the life, safety or physical or mental health of a child and which may pose similar risks to adults would justify the most stringent measures to protect children, even if the measures interfere in a material way with the ability of adults to share or consume that content. In contrast, content which contributes to civic discourse should be restricted as little as possible, consistent with protecting children from harm.

content that poses a danger to the life or health of children, such as dangerous challenges, cyberbullying, the promotion of eating or feeding disorders, encouragement of self-harm or suicide, or providing knowledge of methods of self-harm or suicide.

We must also include content that such as promotion of dangerous and reckless behaviour which can also pose a danger to life and health.

Including such measures as 'warnings' will create better awareness to the dangers being depicted and will also go some way in to dissuade the public from uploading and viewing such content.

Is it also possible for such content to be removed or restricted at time of posting?

7. What is your view on the requirement in the draft Code for a VSPS provider to suspend or terminate an account in certain circumstances?

Agree, and would suggest the setting up of a disciplinary approach based on the level of danger / harm and gratuitous nature of the content. For exceptional cases, accounts suspended with immediate effect while others suspended after repeated breaches and infringements.

8. What is your view on the requirements in the draft Code in relation to reporting and flagging of content?

The length of time taken from an initial report to an outcome must be reviewed and decisions made faster, especially in those cases of a gross infringement of safety and wellbeing. A more transparent process will lend itself to the public being more willing to make a complaint / report; instil confidence in maintaining personal safety and in time, make such offending content less available.

9. What is your view on the requirements in the draft Code in relation to age verification?

This is only as good as how verifiable it actually is. Use of facial recognition along with other age determining factors age may have to be considered to reduce the likelihood of minors getting access to regulated harmful content.

10. What is your view on the requirements in the draft Code in relation to content rating?

Also useful as another flagging measure to highlight harmful content, suggest new age restriction, etc.

11. What is your view on the requirements in the draft Code in relation to parental controls?

Parents must be educated on how these controls work and encouraged to use them. Too often children are able to post content from their parent's devices without parental knowledge. Use of facial recognition, passcodes which must be entered prior to upload would be a potentially useful parental tool.

12. What is your view on the requirements in the draft Code in relation to complaints?

Video-sharing platform service providers shall establish and operate transparent, easy-to-use and effective procedures for the handling and resolution of complaints made by users to the video-sharing platform service provider in relation to the implementation of obligations relating to reporting and flagging, age verification, content rating and parental controls.

As well as easy to use, complaints need to be followed up in timely and effective manner to instil confidence in the procedural system.

13. Do you have any other comments on the requirements in section 11 of the draft Code?

No

14. What is your view on the requirements in the draft Code in relation to audiovisual commercial communications which are not marketed, sold or arranged by the VSPS provider? 82

Agree – also look to include a waiver that the VSPS provider does not endorse or share opinions in the commercial piece.

15. What is your view on the requirements in the draft Code in relation to audiovisual commercial communications which are marketed, sold or arranged by the VSPS provider?

Repeated question 14.

16. What is your view on the requirements in the draft Code in relation to user declarations that user-generated content contains an audiovisual commercial communication?

Agree – influencers, businesses etc should disclose details of sponsored or commercially derived content. Also 'reviewers' who are offering reviews/ product feedback based on their own opinion should be categorised differently as they are providing unbiased feedback.

17. Do you have any other comments on the requirements in section 12 of the draft Code in relation to audiovisual commercial communications?

Advertising farming products should contain visuals and content that promote safe farm practices and behaviours.

18. What is your view on the requirements in the draft Code in relation to media literacy measures?

A promotional campaign that seeks to educate the public on how to use media and create better understanding would be welcomed. Eg. Explaining who owns your images, videos, etc when you post online. Also when you post content that is illegal, promotes unsafe behaviour, etc, what are the consequences.

19. What is your view on the requirements in the draft Code in relation to ensuring the personal data of children is not processed for commercial purposes?

Would like more clarity on instances when and why children's personal data might be needed. It should be never be processed for commercial reasons.

20. What is your view on the requirements in the draft Code in relation to reporting in relation to complaints?

Imperative that this is followed with VSPS on the three months as suggested.

21. Do you have any other comments on the requirements in section 13 of the draft Code?

No

22. Do you have any comments on this section of the Draft Code?

No

23. Do you have any comments on the Annex?

No

24. Do you have any other comments on any section or aspect of the draft Code, including with reference to section 139M of the Act in relation to the matters the Commission is required to consider in developing an online safety code? Consultation on Statutory Guidance

The below point would be of interest in our situation.

levels of risk of exposure to harmful online content when using designated online services,

25. Do you have any comments on this draft Guidance, including in relation to the matters required to be considered by the Commission at section 139ZA of the Act? Consultation on the application of the Code to the category of video-sharing platform services

Nothing further to add

26. Do you have any comments on the proposed application of this draft Code to the category of video-sharing platform services?

Not only video-sharing but image-sharing and audio-sharing platforms should also be included and not assumed in this instance. All social media platforms as well as online news platforms should be included.

27. Do you have any comments on the proposed application of this draft Code to named individual video-sharing platform services? 83 Proposed Supplementary Measures and Related Guidance

No

28. Is there anything you consider the Commission needs to be aware of in relation to the draft supplementary measures and draft supplementary guidance as it further develops its thinking in these areas and seeks to effectively fulfil its mandate in relation to online safety?

Only to consider the content which affects the community we work in – Agricultural sector. When images and videos are posted that contravene farm safety they not only serve to encourage repetition of the actions, or undermine the work of farm safety advocates but also serve to trigger and cause further upset to those impacted by a farming related injury or death.

Subject: Note on Online Safety

You don't often get email from [REDACTED]. [Learn why this is important](#)

Caroline,

I hope this finds you well.

Ciarán O'Regan is my name. I am a Cork based writer who is deeply troubled by the ever-narrowing boundaries of acceptable discourse in the Irish public sphere. A free democratic society cannot survive without the ability to exchange information of all kinds. Article 19 of the UN UDHR states:

Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

If non-democratic states like the Soviet Union, Nazi Germany, Communist China, North Korea, and Iran desperately sought to destroy this Universal Human Right, should those of us interested in preserving and strengthening democracy not instead strive to do the precise opposite?

Recent years have seen social and professional ostracization toward those who dared to

- Question blunt force lockdown measures and school closures which did untold damage and far more harm than good to public health. Data from Sweden demonstrates this clearly, especially when Ireland's current excess death rate is taken into consideration. In the Irish Independent on February 25th 2023, Professor Martin Cormican, a member of the national group who guided pandemic policy here in Ireland, shed some light on why school closures may have been imposed in Ireland longer than the international average, despite lacking scientific justification for doing so:

“Cormican is adamant that children will pay the price for this “for decades to come”, noting education as the single biggest determinant of health... The decision to close schools was not a child-centred one, Cormican believes; he says that it was instead driven by “vested interests”. “There were people who were very invested in not having the schools open, in relation to fears for themselves and others but very little of it was about the children, it was about other people,” he says... The strength of his feeling is apparent as he talks about the “abandonment” of children with special needs and those from deprived areas.”

- Question the natural origin story for the virus that caused the pandemic and which mountains of evidence suggest almost certainly occurred due to a laboratory accident in Wuhan: <https://jamiemetzl.com/origins-of-sars-cov-2/> .
- Question the fervently dogmatic and anti-scientific gender ideology being presented as established fact. Even RTE are now recognizing this problem publically: <https://www.rte.ie/news/primetime/2023/1214/1422073-leading-doctors-complain-hse-to-hiqa-over-transgender-care/>
- Question obviously reckless immigration policy which our national leaders and even the EU are now recognizing as requiring substantial change: https://www.youtube.com/watch?v=rwikTGDe_JU

To question any of the above would be to receive accusations of being "far right" or a "conspiracy theorist" or to have been brainwashed by "Russian disinformation". Some people's reputations were destroyed while others even lost their jobs. This is utterly absurd.

Though such 'cancel culture' and enforced social conformity is concerning enough, your Online Safety Code is even more so. Why? Because if 20th century totalitarianism has shown us anything, it is that States with control over the information ecosystem are the most dangerous forces on Earth. And this Online Safety code is yet another set of powers being granted to the State alongside the truly alarming "hate speech" laws being foisted on us. These are laws which I first wrote about in 2021 and outlined how they share parallels with Article 48 of the Weimar Constitution: <https://areomagazine.com/2021/07/14/against-the-new-irish-hate-speech-bill/>

Yet instead of learning from the past, are we now following the path of present day Germany where political satirists can be legally persecuted. For what? For daring to criticise face masks that never worked to stop the spread of a disease with a 99.8% survival rate. I outline the obviously tyrannical persecution of CJ Hopkins in Berlin here: <https://gript.ie/the-man-facing-jail-time-for-criticising-facemasks/>

Though I assume good intentions on the part of the Coimisiún na Meán, good intentions do not always lead to good places. It is for this reason that I plead with you to consult two people in particular for some dissenting advice:

1. Michael Shellenberger of the University of Austin and journalist at Public. Michael has written extensively about the censorship industrial complex and has testified to the US House of Representatives on the matter. This interview provides a good overview <https://www.youtube.com/watch?v=A4XyIA3XqS8&t=10s>
2. Jacob Mchangama: the founder and CEO of the Copenhagen based think tank Justitia. Jacob has written extensively on free speech including in the Economist, The Washington Post, Foreign Affairs, Foreign Policy and The Wall Street Journal as well as peer-reviewed journals. He is the producer and narrator of the podcast "Clear and Present" Danger: A History of Free Speech" and author of the critically acclaimed book "Free Speech: A History From Socrates to Social Media" published by Basic Books in 2022. <https://www.thefire.org/about-us/our-team/jacob-mchangama>

If we lose the Universal Human Right of "freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers", democratic accountability is over. Done. If Irish democracy has any chance of surviving, we need more open dialogue and debate about the most difficult topics. Not more censorship.

Thank you for your time and consideration.

Happy Christmas and God Bless,
Ciarán.

Good afternoon,

I noticed that Ireland doesn't really have the equivalent of Australia's Therapeutic Goods Amendment Act 2022, restricting influencers from promoting beauty and health products unless they have medical qualifications.

Could Ireland bring in a similar blanket ban on influencers promoting medical, beauty or health products unless they have medical qualifications? I think the Online Safety Code would be a suitable piece of legislation for this restriction, including fines or social media bans for noncompliance and for bot/fake accounts. There is a worrying amount of disinformation and misinformation in this area online.

Subject: Response to public consultation on Draft Online Safety Code

You don't often get email from [REDACTED]. [Learn why this is important](#)

I am writing in response to the public consultation on the Draft Online Safety Code.

I have only commented on the below three questions to which I have specific points to make:

9. What is your view on the requirements in the draft Code in relation to age verification?

One of the suggested methods of age verification is to use identifying documentation (passports, etc.) to verify age, which is a huge privacy and security risk.

Generally speaking, a sensible person should only give such sensitive personal information to companies that they trust, which may not be the case for all video platforms. Furthermore, normalising giving this personal information could make people more susceptible to being tricked into supplying it by nefarious actors setting up video websites specifically to harvest this information.

Platforms which host multiple types of content, some of which is not suitable for children, would by necessity have to gather this information on all users, including for children, which would be even more dangerous. Even when being used solely for adult-only content such as pornography, a website would be able to tie an individual to material that could potentially be used to blackmail them (for example, threatening to expose someone as a homosexual.)

I feel this is dangerous and these types of age verification should not be encouraged.

15. What is your view on the requirements in the draft Code in relation to audiovisual commercial communications which are marketed, sold or arranged by the VSPS provider?

Maybe outside the scope of this consultation, but there needs to also be consequences for the organisations who are placing (or attempting to place) completely inappropriate advertisements. A recent example was of the Israeli Foreign Ministry placing graphic propaganda ads on YouTube, which specifically targeting children. The placing of such ads should be completely illegal, and the VSPS should be required to report even the attempt at doing so.

28. Is there anything you consider Coimisiún na Meán needs to be aware of in relation to the draft supplementary measures and draft supplementary guidance as it further develops its thinking in these areas and seeks to effectively fulfil its mandate in relation to online safety?

I'm placing this comment here as it applies to multiple sections.

I'm worried about this legislation being abused to suppress and stifle free speech.

Even with the current regulations on platforms such as YouTube, we've seen information suppressed by concerted false reporting. For example, videos being incorrectly marked as "age-restricted" to make them harder for people to watch, even when they have no adult content, or videos being taken offline by automatic algorithms that detect a certain number of reports and suppress the video until such a time human operators can investigate the reports, determine that they are false, and restore the content manually.

I fear that this regulation could just be another tool abused by bad actors to censor and suppress legitimate

content, especially political discourse.

Any regulations need to also ensure that platforms can't be too overzealous in removing content without verification, and that they must ensure that the restrictions are not abused to censor content.

The proposed changes are a surefire way to dramatically increase the popularity of dark web adult sites. These changes are so unbelievably short sighted.

If history has taught us anything, it's that restrictions like this will inevitably drive people to the black markets and alternative means of acquiring the content they desire.

Best regards,
Dave Earley

Hello,

I find that this bill will have a negative effect on people's use of the internet.

Not only from the point of view of privacy and protecting personal data (Data breaches aren't just a risk, they're an inevitability. We can only do our best effort to protect our data, this isn't perfect.) but also from the point of view of protecting children.

The only porn sites that will submit to this new legislation are those that are already under governance, not more shady websites who will ignore this kind of legislation (and all other legislation, particularly around the type of content that they host)

Thus, you will find that this will have a counter intuitive effect of forcing people towards more illicit websites with more illicit content.

Think before you fall into the possible fallacy of "think of the children."
(https://en.wikipedia.org/wiki/Think_of_the_children)

Warm Regards,
Barry Pender.

Hello,

I wanted to comment on the online safety that is being proposed here.

As an internet user from the 90's and an IT professional since the 00's, I've seen many rounds of internet content access blocks and counters to the content access blocks.

In short, this barely ever works and while the intent might be noble the result will be far from it.

Unless you manage to block or cover 100% of the content, which is impossible to achieve and foolish to try, this version of online safety through blocks will not work. Asking for passport numbers, and other forms of ID will eliminate privacy on top of being near useless as the ID numbers can be traded/communicated freely on the internet. More robust 3rd party verification exists but are cumbersome to implement. And then, even if implemented, will only stop those who can't find their parent's passports.

The bigger issue here is that if you cover all the legal services and pages that are willing to comply, then the user base will go to the ones you don't cover. And if the fight against piracy has taught us anything then it's that there is always some PC somewhere that is willing to send uncensored content to willing downloaders. If you are doubtful of the results of the prohibition of alcohol, drugs or prostitution, feel free to take a look at the numbers of underage alcohol users, drug addicts and the "escort" websites in our surroundings and feel free to make a similar conclusion on the effect of the proposed code in its current form.

Unless we give the vulnerable, underage users a safe and moderated source of what they came for, i.e. pornography, they will seek out any other content that is out there and the other content they find may not be as gentle or moderated as it should be.

Urging or mandating for websites to default to vanilla and "safe for women" content unless credentials are supplied would serve the stated purpose of online safety better than an outright ban or a block (through mandating passport ID and etc).

Regards,

Anton Madirazza

Hello, I would like to give my strong opinion on the proposed changes which would mandate the passing of personal information to 3rd party websites.

I am vehemently against this, the legislation wants me to give photo identification, and other very sensitive information to third party websites.

This is profoundly stupid and is asking for the leaking of personal information. These websites become prime targets for malicious online actors, seeking to steal personal information.

Why would I trust some random pornography website to keep my personal information? Perhaps parents need to take responsibility for their child's use of the internet.

Not to mention, how exactly will this stop children from accessing the many, many millions of websites which will simply ignore this profoundly stupid legislation?

Whether this legislation is brought into force or not, I will not be handing over my information, I will use sites that don't require it, or I will use a VPN to bypass it.

Stop wasting my and your time, think about this for more than 30 seconds. Good grief.

Regards,

Jamie.

To whom it may concern,

This is a foolish idea. Passports are very sensitive information and we are being asked to give them to adult sites which are constantly breached by hackers. It's like you want to cause the biggest GDPR issue since it's inception.

I'm not sure if this is how to voice it but I am quite opposed to this measure. I have no problem with a different form of ID but passports are a bit much.

Dear Sir/Madam,

I'm highly concerned about the proposed code on a number of levels from its complete ineffectiveness due to the widespread prevalence of VPNs to the shocking privacy violations and unnecessary data collection being mandated to the restrictions only applying to domestic companies.

VPNs will enable the complete bypassing of any local restrictions and are easily accessible and used even by the children this code is aiming to "protect". In addition how exactly is the commission planning on enforcing these restrictions on sites based abroad? If you plan on targeting the large companies which already have the strongest protections for minors then all you are doing is redirecting said minors to other higher risk sites. A teenager attempting to access the material this code is allegedly targeting is hardly going to give up if the first google result does not work. Not to mention that minors are allowed to communicate with each other and the sites which are not restricted and methods of circumventing any restrictions mandated will be quickly circulated via social media and messaging apps. Not to mention that such apps are also a common source of adult material and unless the commission is planning on banning end to end encryption it will be yet another way that this online code is nothing more than a "feel-good" box ticking exercise which is not worth the paper it is written on.

The privacy concerns are astounding, all it would take is a single data breach and names/passport details/selfies would all be released alongside porn habits. If the potential embarrassment of this to ordinary citizens isn't enough then can the commission consider the blackmail potential for members of the dail and other elected officials and the effect this could have on the country from either criminal elements or foreign actors. Currently this happens at least once a year on a major scale(100k+ users data exposed) but this legislation is increasing the value of the data by several orders of magnitude as it can now be irrevocably linked to specific people who can also be conveniently identified by the passport data also held. This increased value is almost guaranteed to lead to increased attempts and successes to access this data. Even the companies themselves may be tempted to use some of this data to apply undue pressure and influence and even if they don't use it, how many politicians would feel unable to say no to a company holding data which would cost them their next election similar to how less developed countries felt they couldn't refuse an unfair trade deal when the british navy showed up even if they never fired a shot? This is even leaving aside the opportunities this code would create for fraud, identity theft(they have your passport details and a selfie) and even the extortion of regular citizens. The idea of passport and selfie as age verification is not novel but has not been used for very solid and researched reasons due to it being a gross violation of privacy and a substantial risk for minimal gains.

The code only applying to domestic video sites despite the internet crossing national boundaries and allowing the viewing of international sites just as easily would unfairly disadvantage any local attempts to set up a video sharing website. I cannot see the benefit of applying this to domestic video sharing sites when any well known sites are universally international. Ireland doesnt have a major video sharing site and this code if applied to as stated will only ensure it never does.

If the commission really wants to improve the business prospects of VPNs so badly might I suggest a direct subsidy instead of infringing on people's privacy in a hamfisted and ineffective manner in a misguided attempt to protect the children?

Regards
Colin

Hi there,

I would like to object to the introduction of some of the codes in this draft bill, most notably the measures that relate to "robust age verification technology to make sure that children are not exposed to inappropriate content, such as pornography." I am a technical editor for a leading online publication and my areas of coverage partially revolve around security.

These technologies require providing sensitive information to companies that can then potentially leak that information in the event of a breach. Furthermore, this will likely only push people, including children, towards VPNs and sites that *don't* engage with the rules introduced here, which may actually harm children more as they become exposed to darker, less moderated content. Free VPN apps are some of the most popular on the Google Play Store and Apple App Store, they are not unknown applications.

These rules, while well-intentioned, will likely cause more problems down the line than they solve. I would be happy to discuss any of the issues raised here, if there were an opportunity to.

All the best,
Adam

Excellent direction this draft is taking but I would personally recommend outright banning the porn industries from the Internet, it is an industry that sexual abuse against children is rife in , Unpopular opinion? porns sites should've been all banned the minute it came out it hosted illegal sexual exploitation of minors and even legitimate rape videos.

There is also a link between children's exposure to pornography and the sexual abuse of other children. A study by the Children's Commissioner in England showed that sexual violence commonly seen in pornography was found in half of police interview transcripts of child-on-child sex abuse cases. Porn isnt good for anyone and is a disgusting degrading industry.

Subject: Feedback - Consultation on Draft Online Safety Code and Related Matters
Flag: Follow up

You don't often get email from [REDACTED]. [Learn why this is important](#)

Hi,

As someone who has been working in the software development space for the last 10 years and has seen the impacts of security breaches, I feel that there is a number of issues with requiring passport identification.

As we recently saw with the HSE breaches, which resulted in a large proportion of the country receiving scam calls, security is a very difficult. While I'm sure the ID system designed won't intend to log or track user's website access, it will be almost impossible to avoid in practice. There will be too many potential leaks, from employees to debug statements and internal software logging, all of which need to be secured, causing their likelihood to be leaked to effectively be 1 over time.

As a secondary point, requiring identification online is not an issue with our current political powers. But as the world continues to change and we see more authoritarian governments gain popularity around the world, the risk for identified users online is not a small one. People should have the right to privacy, this goes for what content they choose to consume and what political ideologies they hold. Access restrictions like this are one step towards restricting free access of all information, which is open to abuse. This type of policy solves one problem in the name of protecting children and creates much greater problems for all of society. We pride ourselves on not being under authoritarian rule like China or Russia, but this is a step towards that and away from freedom of accessing all information.

Regards,
Colm Egan

Hi,

I would just like to provide some feedback for the draft Online Safety Code put forward, and my personal experience growing up in the age of modern technology. In particular I would like to address the idea of "robust age verification" and from reading the proposals, all of this would be implemented by the video sharing platforms themselves.

I believe this is putting a strong reliance on these platforms to follow these regulations and so can we even guarantee that this will be followed at all? What repercussions would there be for these platforms? It is said in the report that the Code will be "legally binding on designated video-sharing platforms based in Ireland " and that fines up to €20 million will be imposed for breaches. What is a designated platform, and what exactly does "based in Ireland" define? There are millions of pornography sites online, which I'm sure the vast majority are "based" outside of Ireland. It's a very vague definition, which to me, sounds like these fines will mean nothing to the majority of sites online.

I would also submit my opinion that a lot of these pornography platforms are not entirely legitimate in the first place, so why would anyone in their right mind submit some of their most personal information to these sites? Again it's putting a huge reliance on these platforms to act diligently with this extremely personal (and highly lucrative information on the dark web) information which I believe to be an extremely dangerous approach to take.

The UK Government is attempting a similar approach at the minute, do we really want to blindly follow the current UK Government yet again?

In my opinion, parents are entirely responsible for their child's internet access, it should be up to them to apply age restrictions on any devices that children can access. Rather than the Irish government coddling the population with another nuance issue, a bit of self-responsibility would go a long way.

I'm saying this as a young parent myself - I first had a mobile phone with internet access when I was about 11, but my parents put in a bit of effort and restricted content for me. As annoyed as I was at the time, I can look back at it now and appreciate their efforts in shielding me from inappropriate content online.

Would this not be considered a better approach even today, to age-verify a device for accessing online material, rather than verification from the potentially nefarious pornography site? At least then you are reliant on a reputable brand, such as Apple, Android, Samsung, Sony etc.

I'm not sure if the mobile networks in Ireland still do this or not, but Three had an age-verification process for accessing adult material on their mobile network, which matched your details they had on record with provided details like a Passport - again this is with the mobile network, and not the online platform - so I believe this would be a less risky approach to take and would achieve the same results.

Finally, in this day and age, with something as intrusive as the age verification / selfie being proposed for "child safety", it does appear to me to be a threat to personal privacy and the child safety line is being used as a catch-all excuse by various governments and political bodies across Europe.

Many thanks,
Mark

Hi,

I absolutely oppose this draconian bill dressed up as child welfare and call it our for what it is. More surveillance and authoritarian control being pushed by this government. If allowed, the end product is full surveillance of peoples search history and online activity with our passport or eventually, digital ID.

Completely oppose this bill.

Regards,
Alan

To Whom It May Concern,

In the consultation document regarding your draft Online Safety Code, you claim that you are attempting to balance "effective protection for children with as little impact as possible on adults who wish to upload, share or consume lawful content."

Later in the document, you then proceed to state that you suggest age verification measure such as uploading of personal identification documents, biometric facial recognition, and analysis of internet usage history.

All of these measures would constitute massive breaches of a individual's right to privacy, as well as putting them at risk of harmful data breaches.

Those measures are not "as little impact as possible". That is a titanic amount of potential impact. The sheer level of disconnect between these two elements of the draft proposal is astounding, and I urge you to reconsider.

You say that self-declaration of age is not an effective age-verification technique, and to this I agree. But any measure beyond that, especially those that you yourself have proposed, are invasive and dangerous. There is a reason why it has remained the main form of age-verification online for so long.

I once again urge you to reconsider, or else you may find your measures to be the cause of hardship and scandal in the future.

Kind Regards,
Ciarán Sheehan

This code is a serious privacy and security risk to the general population and the "next steps" that will inevitably follow this code are worrying (VPNs, DNS, encryption).

Regardless of how the code is implemented, there will be at least one entity or one group of entities that link (track) people and their online activities, even if not by intentional design. When these entities are breached (hacked, data leaked, etc), not if, but when, there will be targeted scams, blackmail, identify fraud, and more.

IDs should never be required to browse the internet, nor should any entity hold them or even worse be able to correlate them with personal activity. Security experts around the world make this point time and time again. Privacy, security, and freedom are of utmost importance and cannot be infringed on. People should not be stopped from accessing legal content that a governing body don't want them to see. Beyond privacy, security, and freedom, think of the democratic implications of this.

Moving onto controlling what legal content can be uploaded and the vagueness of definitions: this is an overreach into freedom of speech and expression.

This code is a massive overstep into the freedoms of Irish people. I, like almost every security and privacy advocate in the world, am strongly against the overreach in this code. Please do not move forward.

[this is important](#)

As a software developer, the proposed solution of sending passport details to ensure age verification is flawed and comes with a huge security risk to the end user. While the need for protecting our children is valid, it's a noteworthy concern that many sites hosting adult content are unscrupulous. These sites simply cannot be trusted with sensitive details, including facial identification and passport information. The proposed "gold standard" is a recipe for disaster and **will** end in user details being stolen and used maliciously. These sites simply cannot be trusted with sensitive details like this.

A more effective and secure approach would be the development of a government-managed digital passport system. This system, specifically designed for age verification purposes, would be under the direct oversight of the Irish government, ensuring a higher standard of security and privacy. The digital passport could serve not only as a reliable method for age verification but also has the potential for expanded functionalities in the future. To explain briefly without getting too technical, this digital passport would function by securely authenticating age verification requests. This method provides a safer alternative, mitigating the risks associated with directly submitting sensitive personal information to various websites.

While the initial setup of a system like this may incur higher upfront costs, if executed correctly, it can be expanded in the future to assist with the modernization of public service technology

It's worth noting that with the rapidly advancing capabilities of artificial intelligence, current methods used for verification and authentication will soon become trivial to fake. In fact, this is already achievable with the right expertise.

It is my professional opinion that a digital passport, managed by the government and implemented correctly, is the only viable long term solution to this problem, as this can be directly linked to official documentation in a secure manner without exposing sensitive user details to the internet.

Yours sincerely,
Donnacha Connolly Browne of [REDACTED]

This entire thing is a disgraceful government overreach and a ridiculous invasion of privacy.

It is nothing short of an authoritarian attempt to control what people see and do online under the guise of safety

Cnam should be shut down entirely for even proposing that such appalling ideas become legislation

A chara,

My opinion on draft Online Safety Code and Related Matters

While ensuring online safety is crucial, the proposed regulation will lead to abuse of power from government, repression of freedom, and will expose all users to GDPR breaches and collection of huge amounts of personal information.

The implementation of age verification technology could be seen as intrusive, raising privacy concerns and undermining the principle of personal responsibility.

Concerns include the potential infringement on freedom of expression, as platforms might overly restrict content to avoid fines..

I'm also skeptic about the effectiveness of age verification technology, as it could be circumvented, and false positives might restrict access for legitimate users.

If age verification is required, this will harm children by pushing them to websites that do not monitor and verify uploaded content, which will actually harm children.

There has been a trend in using 'child safety' as a scapegoat to more actively monitor citizens for anti terror activities. You can see the EU is already trying this nefarious action by forcing companies to scan all your communications and photos (1), and some countries are even trying to ban end to end encryption(2).

To whom this may concern

As an internet user, programmer, web host and employee of a software company, I vehemently oppose the proposed legislation. This will not improve safety, it will cause leaks of sensitive personal information such as passport information to unknown and untrusted third parties. It is also an infringement of basic civil rights, and a pointless endeavour since it will be trivial to bypass or visit even less trustworthy sites.

You won't keep children safe this way, but you will destroy the open internet and make Ireland a laughing stock internationally. Whoever proposed this needs their head examined.

Sincerely,
Willie Harrold

The idea that websites that contain adult content would require passports or other types of highly private data to access is an absurd idea. The risk you open people up to by having these companies save and store such data is immense. Also this would give parents a huge false sense of security as its incredibly easy to get around any such geo blocked requirements by simply using a VPN which children are absolutely already aware of. Therefore, this will not stop children viewing adult content, but it will make many parents think their children are safe and stop observing their online behaviors. It will open up people who do use such sites and provide their private information to a much higher likelihood of identify fraud and scams.

Anyone suggesting such a scheme quite obviously has no really clue about the technology or issues involved as its ill conceived, reactionary and lacks any real world understanding.

To whom it may concern,

I have recently been informed about the safety codes that require certain websites to request passport information for use. I believe this is a gross infringement of personal privacy and could be a dangerous road to go down with regards anonymity and leaking of personal information. Websites such as porn sites collecting something as important as a passport scan is not something any government should want to happen. Events such as hacking, or data security could be compromised and this could jeopardise a society's trust in the very government that wants to implement such a stringent measure. As for the children it purports to protect, they will just search around the established porn sites and find even more harmful material, counteracting the usefulness of the safety code.

I seriously wish those who want to bring forward the online safety code to reconsider their actions before submitting such a code.

Regards,
Paul.

Hi,

Just on the draft code. I feel this is a gross overreach and would be handing a lot of information to sites that can't be trusted (ignoring the porn sites, this act can be used to enable Facebook, X/Twitter, Reddit etc access to passport information). It's a dangerous and dumb policy to allow that.

Subject: Submission for Consultation on Draft Online Safety Code and Related Matters

You don't often get email from [redacted]. [Learn why this is important](#)

Hello,

I have never tried partaking in a public consultation before so apologies if I am sending this to the wrong email or submitting my response in the wrong way.

I have reviewed and have some feedback on one of the points in:
Draft_Online_Safety_Code_Consultation_Document_Final.pdf
Draft-Online-Safety-Code-Public-Consultation-QA.pdf

My issue is with "The guidance notes robust age verification can involve using a photo ID and comparing it to the likeness of the user or age estimation." I personally disagree with the idea of using facial recognition technology or the submission of photo ID with DOB e.g. passport, in order to control access to websites. I think this is massive privacy vulnerability as no website is impenetrable and will eventually be hacked have big data leaks. From my reading into possible ways this could be implemented as how other countries have done it I don't like the idea of a third party company being involved to handle the verification services as they are not a government body so are not under as much scrutiny and while it would be illegal for them to sell our data they obtain through seeing what sites we use to verify ourselves to create accounts on, that has not stopped companies before e.g. Facebook keeps being fined by the Irish Data Regulator for breaking data privacy laws.

I think this could create a big vulnerability for blackmail and impersonation for people as in the current draft it is proposing it for pornographic websites but what about children accessing 18+ video games like Grand Theft Auto or 18+ Movies you could rent online (note on this is I don't have an example as I don't watch any, I know Deadpool was R rated in America but was a 15 age rating here). That issue that I could see here is more and more services will require facial verification which means if these images used to verify ourselves are leaked, they can be used to impersonate and steal peoples accounts on sites like GameStop where you could buy Grand Theft Auto. The issue with blackmail is with pornographic sites as if someone can steal an individual image of their face to access the website they could then blackmail with their face. My Parents for instance are not tolerant LGBT+ content and if I did view any of it and someone was able to gain screenshots of that content on an account I had on a pornographic website, I could be threatened as my Parents would kick me out of the house.

I actually do already have experience with this sort of system as I recently changed Mobile Provider to Vodafone and was not able to view websites I would normally go onto everyday on mobile data. I found this was because by default Vodafone have a age restriction on websites viewed on mobile data and you must provide photo id that proves you are over the age of 18 to be unrestricted. I was quite shocked as the websites, I hadn't thought had 18+ content on them as I had never used them for it but how I solved it was I went down to my local Vodafone shop and provided Id to prove I am over the age of 18. This system I am kind of okay with as they are just noting my age and it is in person and they are NOT storing my photo id that I gave them.

I think a better solution is something I encountered on YouTube before of where it asked me to make a small credit/debit card transaction (it would just charge my card 1c and then give it back) to prove that I am 18+. I think this is a great system as it provides no personal details to YouTube or anyone else. Only people who are 18+ should have cards like this and if some parents do allow their children to have a card e.g. I know Revolut advertises under 18 cards, should be having their card transactions monitored by their parents at all times so if they do try to bypass this, the parents should be able to spot it.

I do think the much better solution is just giving parents more tools to better monitor their children's time online and as a quote from the draft: "giving parents tools to guide what their children can do online".

I think that should be the goal of handling children access pornographic material instead of implementing a facial verification system that is a can of worms which would be very exploitable and dangerous in the wrong hands.

Thank you,
Kind regards,
Cian O'Sullivan.

Subject: Draft Online Safety Code Objections

You don't often get email from [REDACTED]. [Learn why this is important](#)

Hi,

I have multiple objections to Draft Online Safety Code. Please see below points:

- I find the premise that citizens would have to provide Irish personal identification to a private company for use of a service to be reckless. The pornography industry has long been associated with other criminal activities, and while websites may operate in Ireland, the expectation that a passport, driving license, or other form of personal ID, would have to be provided to a foreign domiciled company is gross negligence on the government's part to protect private citizen data.
- The pornography industry has long been at the forefront of pioneering new technology - for example, peer-to-peer downloading, streaming services, VR technology, spam & phishing e-mail, etc.. To put the power of age verification into the hands of this industry would only allow them to streamline the action so that the quickest and simplest solution in sharing personal information would prevail. They would allow for one system of age verification to be used across multiple sites, sharing private information to do so. This would further extend to other content sites, as has every other breakthrough in technology, leaving the user with no control whatsoever over their personal data.
- The persistent term "Incitement to violence or hatred" is based on what definition of hatred? Is hatred defined by the government, the justice system, the public? This line in the document is asinine (see page 13): **"For instance, a video depicting a famous member of an ethnic minority might not be harmful in itself but would indirectly lead to harm if it attracted comments that incited to hatred or violence."** This implies that ANY video uploaded, where the comment system attracts negative public comments, could allow for that video to be removed. This is far too ambiguous and tremendously open to abuse by online communities, in which a large amount of negative (hateful) comments would be all that it takes to have content removed. This leaves the door wide open for factual and informational content to be removed based on a small minority of the public's reception of this content. Not to mention that this code would leave it in the hands of private companies to decide what is suitable for the public to view. This flies in the face of the commission's goal to quote "support the development of the wider media sector in Ireland".
- The internet is far too vast in scale to allow any scalability when it comes to enforcing ANY of the proposed legislation. In the paper "The Internet is For Porn: Measurement and Analysis of Online Adult Traffic, Faraz Ahmed*, M. Zubair Shafiq†, Alex X. Liu*", one source estimates that there are over 4 million pornography sites on the internet. How is this regulation to be enforceable and how are Irish citizens to be assured that their private data is safe and secure?

There is so much to say on this code that I do not have the time for. The commission needs to be very careful on how they proceed with any wording. This is clear to me at only a cursory glance, as any appreciation for the internet's true nature is not considered in it.

Regards,
Liam.

Subject: Consultation on Draft Online Safety Code and Related Matters

You don't often get email from [REDACTED]
[Learn why this is important](#)

A Chara,

I read about the consultation on Draft Online Safety Code recently and wish to provide feedback inline with the process. Please see my feedback below:

3.2: Draft Code: Introductory Sections

1. Do you have any comments on sections 1 - 9 of the draft Code?

- No comments on sections 1-9.

3.3 Definitions:

2. What is your view on the proposal to include user-generated content that is indissociable from user-generated videos in the definition of content to be covered by the Code?

- The industry expert is correct in this instance. You cannot be expected to police content based on what others may comment or garner from it. It is a uniquely naive view of how the internet works. Once something is uploaded, it may be used in ways that could not possibly be imagined by the original content creator. To link these is not correct. Furthermore, ANY video or content could lead to hate being generated in the comments underneath. To not draw a distinction is unacceptable if you are to draw up a coherent workable policy.

3. What is your view on the definitions of “illegal content harmful to children” and “regulated content harmful to children”?

- No comment

4. What is your view on the other definitions of illegal content and regulated content?

- This definition is grossly overstated, so as to be so broad as to be unworkable. For instance, any discussion about the current housing crisis in this country could be considered, in some circles, to be hatred against landlords based on property as included in your own definition. Furthermore hatred based on political opinions are so broad to actually intersect other definitions. For instance, if ones political opinion was aligned with white supremacy, this would be hateful against people based on race, but your own definition wouldn't allow this to be highlighted online as to do so would be hateful to that person based on their political beliefs. This is an obvious black and white case, but it becomes less clear as you move toward the edges - see for instance Germanys handling of the Israeli war on Palestine.

5. Do you have any comments on any other definitions in the draft Code?

- Not at this time.

3.4 Obligations relating to Content:

6. What is your view on the obligations in the draft Code that relate to what a VSPS provider must include in its terms and conditions?

- I strongly disagree with this approach. Firstly it is not the job of the world or keep children safe in every instance. This is the job of a parent or guardian. Instead of the Commisun striding out of its way to restrict content for all users, which it is under these obligations, it should look

to understand why Children are being allowed access from their guardians. Children should be caged in online to appropriate content, not having everyone else caged out. The main issue here is that while definitions may sound reasonable in a meeting room where these decisions are made, where everyone is trying to be as politically correct as possible, these actions affect how people act in private which has a much different set of rules and norms. This is not a corporate policy that is being enacted, these are peoples very personal lives online.

7. What is your view on the requirement in the draft Code for a VSPS provider to suspend or terminate an account in certain circumstances?

- While larger platforms certainly have the resources to do better on reporting than they are, smaller platforms may not. Industry experts (not just companies themselves) should be consulted on the appropriateness of these timelines.

8. What is your view on the requirements in the draft Code in relation to reporting and flagging of content?

- No comments.

9. What is your view on the requirements in the draft Code in relation to age verification?

- I disagree in the strongest possible way. To introduce these measures are naive in the extreme and will be worked around almost instantly by any child via VPN etc. You have to remember they are of the internet, they know how these technologies work better than many of us will ever know. Secondly to introduce biometric data requirements will lead to serious personal information risks and persecution, destruction of character, personal loss and personal security issues way beyond what seems to have been considered by this commission. With someones biometric data, personal accounts including bank accounts can be accessed. This is data that should only ever be provided by the most trusted of institutions, not google, not facebook and not any other video sharing platform. Finally, this exact solution has already been rolled out in some of the most conservative states in the USA, also under the guise of child protection. It has led to widespread ridicule, instant circumvention via VPN and other methods, and the cessation of service by a number of VSPS in those states. Child protection may be a noble endeavour, but it can also be used as an excuse to push conservative religious views in regulations such as these. To introduce these regulations would mean the de-facto banning of this content in its entirety in this jurisdiction as no person with any comprehension of how the internet works will upload a biometric document to a site such as these for a litany of reasons already laid out. To those on the commission that are OK with this as a price to pay for the greater goal, just remember that the savage policy of Church in this country pushing repressive agendas such as this under the guise of the greater good has been rejected by society over the last three decades.

10. What is your view on the requirements in the draft Code in relation to content rating?

- No comments.

11. What is your view on the requirements in the draft Code in relation to parental controls?

- This is the correct way to police internet use by Children. They should be boxed in to services that are approved by their guardians, not boxed out of certain websites or content. There is simply no way to ensure that the daily creation of websites can be coherently policed on the internet effectively.

12. What is your view on the requirements in the draft Code in relation to complaints?

- No comments.

13. Do you have any other comments on the requirements in section 11 of the draft Code?

- Most has been covered by the above, but just to re-iterate, the approach to begin with is coming from the wrong side. Childrens safety, if that is the actual goal, should be boxed into services, not boxed out. Should the recommendations be introduced as in this draft, you must also consider reputational damage to the state. Just as with Minister McEntees well intentioned

but poorly thought out Hate Speech legislation which has garnered headlines across the western world, this restriction would paint a very poor image of Irelands commitment to openness and freedom of expression on a world stage.

3.5 Audiovisual commercial communications:

14 What is your view on the requirements in the draft Code in relation to audiovisual commercial communications which are not marketed, sold or arranged by the VSPS provider?

- No comment.

15. What is your view on the requirements in the draft Code in relation to audiovisual commercial communications which are marketed, sold or arranged by the VSPS provider?

- No comment.

16. What is your view on the requirements in the draft Code in relation to user declarations that user-generated content contains an audiovisual commercial communication?

- No comment.

17. Do you have any other comments on the requirements in section 12 of the draft Code in relation to audiovisual commercial communications?

- Influencers should absolutely be required to disclose clearly when content is being paid for or a service being provided for a discount/free of charge in exchange for content.

3.6 Other obligations

18. What is your view on the requirements in the draft Code in relation to media literacy measures?

- Media literacy can only be a good thing. However as we have seen in this country with regard the media landscape, it is a highly sloped landscape with regard to traditional media due to a number of external factors such as ownership, funding, advertisers and power structures. A genuine media literacy measure would be required to be brave enough to highlight these issues which could go directly against the commissions own interests and interests of the government.

19. What is your view on the requirements in the draft Code in relation to ensuring the personal data of children is not processed for commercial purposes?

- No comment.

20. What is your view on the requirements in the draft Code in relation to reporting in relation to complaints?

- No comment.

21. Do you have any other comments on the requirements in section 13 of the draft Code?

- No comment.

3.7 Supervision and Enforcement

22. Do you have any comments on this section of the Draft Code?

- No comment.

3.8 Annex to the Code

23. Do you have any comments on the Annex?

- No comment.

24. Do you have any other comments on any section or aspect of the draft Code, including with reference to section 139M of the Act in relation to the matters Coimisiún na Meán is required to consider in developing an online safety code?

- No comment.

4.1 Sections of Draft Guidance and Consultation Question

25. Do you have any comments on this draft Guidance, including in relation to the matters required to be considered by Coimisiún na Meán at section 139ZA of the Act?

- No comment

5. Consultation on the application of the draft Code to the category of video-sharing platform services

26. Do you have any comments on the proposed application of this draft Code to the category of video-sharing platform services?

- All have been covered above, no further comments.

27. Do you have any comments on the proposed application of this draft Code to named individual video-sharing platform services?

- No comment

6.5 Guidance

28. Is there anything you consider Coimisiún na Meán needs to be aware of in relation to the draft supplementary measures and draft supplementary guidance as it further develops its thinking in these areas and seeks to effectively fulfil its mandate in relation to online safety?

- No comment

Sincerely,

Seán

Subject: Consultation on Draft Online Safety Code and Related Matters

You don't often get email from [REDACTED]. [Learn why this is important](#)

While the intention behind robust age verification on video platforms is often to protect minors from accessing inappropriate content, there are several arguments against implementing overly stringent age verification measures. It's important to note that these arguments do not advocate for the exposure of minors to inappropriate content but rather highlight potential challenges and concerns with the implementation of such systems:

1. **Privacy Concerns:**

Robust age verification systems often require users to provide sensitive personal information, raising concerns about privacy. Users may be hesitant to share details such as their date of birth, identification documents, or other sensitive information online, especially considering the risk of data breaches or misuse.

2. **Effectiveness and Reliability:**

Age verification systems may not be foolproof, and determined users may find ways to bypass them. False information or borrowed identification could be used, undermining the effectiveness of the verification process. This raises questions about whether the costs and potential privacy risks associated with these systems are justified.

3. **Access Barriers:**

Implementing strict age verification measures could create access barriers for legitimate users, including adults. Some users may face difficulties completing the verification process due to various reasons, such as lack of official identification, technical issues, or other limitations. This may lead to a reduction in user engagement and a negative impact on the user experience.

4. **Impact on Innovation:**

Implementing stringent age verification measures may impose additional burdens on video platform developers and content creators. The resources and effort required to comply with these measures could stifle innovation, particularly for smaller businesses and independent content creators who may find it challenging to navigate complex verification systems.

5. **Focus on Education:**

Instead of relying on age verification systems, there could be a stronger emphasis on educational initiatives to teach both parents and children about responsible online behavior. Promoting digital literacy and fostering open communication can be effective in addressing the root causes of inappropriate content exposure.

6. **Risk of Over-Censorship:**

Overly strict age verification measures may lead to over-censorship, blocking content that may be appropriate for certain age groups but is mistakenly categorized as inappropriate. This could limit the diversity of content available on video platforms and hinder freedom of expression.

In summary, while the protection of minors online is crucial, it's essential to carefully consider the potential drawbacks, such as privacy concerns, access barriers, and the impact on innovation, before implementing robust age verification measures on video platforms. Balancing the need for safety with user privacy and accessibility is key to finding a solution that works effectively for all stakeholders involved.

Subject: Online Safety Bill public consultation

You don't often get email from [REDACTED]. [Learn why this is important](#)

To Coimisiún na Meán,

The draft Online Safety Bill is extremely worrying and disappointing. The fact that the idea of measures such as passport based age verification would be implemented in Ireland is shocking, and I question the understanding of how the Internet works by those that put together the draft and those from Coimisiún na Meán who have publicly stated that such identification measures could be implemented.

I am a IT and cybersecurity student and I would have hoped to see more sense from people on the board than to publish such ridiculous statements such as the idea that pornography websites (based in Ireland, of which I would have thought is pointless legislating against because the number must probably be 0) would require passport or such an ID to access.

The security implications of making the user identify themselves to probably the most shady type of website you can find on the clear web is mad.

I seem to remember the UK attempting to implement such an age verification policy but it backfired completely and left the entire world laughing at the seemingly out of touch decision makers promoting such measures.

The argument of protecting the children is a valiant mission but is all too often used as a cover or excuse to push through new powers that increasingly infringe on civil liberties. The fight against CSAM imagery or keeping children safe has been the go to argument by those trying to break encryption standards and impose a back door on E2EE, ban VPNs and push through increased powers for surveillance. I don't think I have to explain any of these things to at least two members of Coimisiún na Meán board including the Executive Chairperson who have extensive experience in the IT and regulatory sector.

The real focus should be on teaching or implementing some program to teach parents about how to block such content from their childrens devices or telling them not to just hand a smartphone to the kid the day they are able to hold one.

The focus on making video content platforms have an accessible and actually functional, where the content is filtered and vetted properly, child appropriate version seems like a good idea as well. I take the example of YouTube. They have YouTube Kids, which is intended to be a suitable version of YouTube whereby all the content is properly age appropriate. However this is not the case, as a quick look online will show the dire state of the platform and the disturbing cartoon videos with inappropriate messages are rife on the platform. This is somewhere I believe Ireland can exert its influence over the tech companies like Google that are based here and make them properly vett the content on YouTube Kids and have it as an actual suitable locked down version of YouTube.

I'll be really shocked if the types of ID measures floated about by Coimisiún na Meán go into place. When you look at the balance between the cost to privacy and civil rights and the potential of a very small number of children complying, the cons vastly outweigh the pros.

Subject: Objections to the Online Safety Code draft

You don't often get email from [redacted]. [Learn why this is important](#)

Hello,

I am writing in relation to the Online Safety Code draft.

I am a Computer Science graduate of Trinity College Dublin and have over ten years of industry experience developing software as well as being an advocate for inclusivity within the space.

I strongly object to some of the proposed items and suggest they be redacted or altered to address their overreach.

- Users will be disinclined to use services that require document-based identification. One core aspect of the internet is the option of anonymity. If there was a leak of information (much like the HSE one a few years ago) containing even the URL access a user performed, it could be devastating to ones career and social standing.

An alternative to per-site may to be to enforce per-device regulations. When a user buys a phone, they provide a birthdate to the internet provider (e.g. Eir, Virgin) which would apply filter if the user was underage. The filter would be removed once the appropriate age is met.

For shared devices, such as home routers, per-connection filtering could be configurable.

For public WiFi, such as in airports or cafés, I recommend against filter actions. A user may not want to provide ID and cumbersome process for a short connection, or the data to a potentially hostile host.

- Extension of this system may be taken advantage of by advertisers. For example, women may be more targeted by pregnancy advertisements if their gender and age can be confirmed by such a service. This can be very difficult on someone who may not be able to have children for various reasons.

I agree with some of the suggestions in the draft such as limitations against hateful content going viral. For example, triggering review after a certain number of views. However I think the age verification system should be reviewed by a third party concerned with matters of privacy such as the ICCL and the DPC.

Thank you
Ian

Subject: Re: Online Safety Code proposal

[You don't often get email from [REDACTED] Learn why this is important at <https://aka.ms/LearnAboutSenderIdentification>]

To whom it may concern,

Simply put. No.

This will kill the idea of freedom of the internet
And I do not want any government to police the internet.

It's VSPS now, but of course this would be extended in the future to
Twitter, Facebook, emails, whatsApps, SMS and then phone calls. (And
don't say it won't... cause it will be)

Absolutely not. This is horrible. Shame on the people that has composed
this document.

Shame on anyone that tries to push this through.

Regards,

Subject: Feedback on the Media Commission's proposal

You don't often get email from [REDACTED]. [Learn why this is important](#)

To whom it may concern

I am writing to voice my strong and honestly shocked opposition to the Commission's proposal to require adults and minors to send a copy of their passport to websites - including porn sites - and also send them a live selfie for verification purposes.

This is obviously a terrible idea, and as somebody who works in tech I can promise you that even if it were not immediately a terrible idea, we can not trust the internet companies (including porn companies which have been accused of encouraging sex trafficking and child pornography) to safely store such passport information and selfies without doing anything awful with them such as setting up databases of pornography preferences, linking real identities to advertising profiles, leaking them, and so on. They have done this repeatedly with other types of personal data with depressing regularity. The Commission blocking their ears and saying "it's illegal to do that" won't change anything.

I honestly wonder how the Commission could possibly come up with such a an outrageous suggestion, and I ask if anybody on the Commission has followed any aspect of internet news over the last two decades.

This proposal should preclude anybody who currently works at the Commission from having any say on Irish and EU security and privacy policy of any sort. They are clearly unqualified to be anywhere near such decisions.

I am at least encouraged by the fact that if the Irish government attempts to enact this proposal, they will once again be slapped down by the EU for attempting to do something against both the text and spirit GDPR.

Jeremy Godfrey should resign to make room for somebody who understands how the internet works, assuming this commission wishes to continue to broaden its remit towards the internet.

Regards,
Cian Mac Mahon

Subject: Dangerous sharing of private information to private companies

You don't often get email from [REDACTED]. [Learn why this is important](#)

Dia dhaoibh

I am emailing today to express my opposition to a massively ill-thought out authoritarian idea of forcing the general public to upload their personally identifying information to private companies for the ostensible purpose of 'protecting minors'.

Time and time again we have seen private companies fail to safeguard GDPR data. Mandating more companies to engage in this risky behaviour will grow the amount of people in Ireland that fall victim to identity theft. This policy should never go through in the current format.

If you legitimately believe CnaM's purpose is to be an internet censor (I don't for the record), the least you can do is advance your agenda in a manner that doesn't put people at risk. The state can host this KYC infrastructure, and make opaque 'proof messages' that a given person has verified their identity, and you can mandate that companies require these proof messages instead of people's passport photos. That at least would mitigate some of the harm you (intend to?) cause with this policy.

I urge you to think of the harm you will cause by putting sensitive information into the hands of companies not fit to custody it, and take a different harm-minimised approach to your censorship goals. That at least would be less villainous than the strategy as planned.

I hope to see this initiative abolished or at the absolute least rewritten to put citizen's privacy and consumer protection first.

Gan meas,

Oisín Kyne

Subject: Feedback on draft Online Safety Code

You don't often get email from [REDACTED]. [Learn why this is important](#)

I'm writing to provide feedback regarding the open consultation detailed at <https://www.cnam.ie/coimisiun-na-mean-opens-public-consultation-on-irelands-first-online-safety-code/>

This plan is a mess.

Methods it proposes to tie user action to record keeping are unrealistic and impractical. The scale of recording keeping for these methods is a disaster waiting to happen too in a time of mass data breaches. Such breaches happen regularly even in the online infrastructure of companies with serious resource commitments to prevent them.

The most secure government databases are the ones a government has the wisdom to refuse to create. What is being proposed is second rate-security.

Preventative advisories for parents on limiting their children's access to the internet avoid so much of this mess, are time tested (unlike whatever unspecified photo analysis process this proposal relies on to succeed consistently in a time of rapidly advancing deepfakes undermining it) and address actual problems instead of fear-mongering talking points.

In response to the invite for public consultation I urge this draft code gets the axe. This is utterly wrongheaded.

IMLM, Anthony Burns

You don't often get email from [REDACTED]. [Learn why this is important](#)

I write regarding the plans outlined by your executive chairman James Godfrey in an interview with the Irish Examiner ("[Porn sites may require passport details in order to stop children from using them](#)"), as you have called for feedback until January 31st. My feedback follows:

You imbeciles. You fools. You incompetent, credulous buffoons. First, you claim that "to protect children" every porn site (websites that, it should be noted, are NOTORIOUSLY lax with security, often riddled with malware and security vulnerabilities) must keep copies of adult and child passports and their "live selfies" and biometric data for up to 6 years, to allegedly comply with EU data protection law. I cannot even begin to explain how shamefully stupid and dangerous the concept of creating a register of porn preferences, linked to biometric data of children, is. This statement alone is enough to demonstrate Mr. Godfrey is incapable of understanding his own job, and the fact that nobody else in Comisiún na Meán prevented him from saying as much says the same about all his staff and advisors.

Secondly, the terms are comically vague. Godfrey focuses on pornography websites, but fails to acknowledge that this regulation, thanks to the Broadcasting 2009 Act and Online Safety and Media Regulation 2022 Act, can apply to almost any platform under Irish jurisdiction where videos can be uploaded, including, but not limited to, Facebook, YouTube, Twitter/X, Whatsapp, and more. What constitutes "age-appropriate" content is also so vague it may as well be translated as "whatever moral panic the government of the day wishes to invent". We have seen similar regulation in other countries used to ban books from libraries because they have LGBTQ+ themes, or deal with the subjects of racism or religious bigotry. You must think the public even stupider than Mr. Godfrey if you think we don't know these intentionally vague regulations won't immediately be abused to target minorities and groups based on religious/political beliefs or their ethnicity. Did you forget how far-right agitators spent all of last summer travelling to Irish libraries to harass and threaten staff because they dared to contain books that were "too gay"?

Jesus Christ. How have you not choked on your own incompetence yet?

Thirdly, Mr. Godfrey's asinine, half-baked, idiotic plans simply don't meet EU requirements of necessity and proportionality. The EU Audio-visual directive suggests "PIN codes" is enough. You are claiming you need passports, selfies, and biometric data. This is absolutely, abhorrently over-the-top by any sane standard, and, given what is generally known of porn sites, more than likely to put those children and adults you so want to "protect" at massively increased risk of danger. And, given what we know of corporations like Google, Amazon, and Elon Musk's new, rebranded, X/Twitter and their routine abuse of private data (and, lest you need reminding, Musk has *personally* reinstated accounts that posted child sexual abuse material back on his platform!), I can only conclude that everyone in Comisiún na Meán has, not to put too fine a point on it, *lost their fucking minds*.

I do hope you will take this feedback in the manner it was intended (that is, those of you in charge are *extremely stupid and incompetent and should resign in shame immediately, you fucking dipshits), and I look forward to seeing how your short-sighted, reactionary, thick-as-pigshit proposals fare against the EU laws they flagrantly violate.

Yours etc.

Subject: Insane law - Porn preference Law EU

You don't often get email from [REDACTED]. [Learn why this is important](#)

Hello EU Regulators,

This is a massive invasion of privacy, requiring people to send their passports and live selfies to websites? especially porn sites?? is an egregious violation of privacy. It's like asking someone to leave their house keys at the front desk of a club. Not only is this intrusive, but it also creates a honeypot of sensitive data that could be exploited.

Imagine the security implications. These sites would have to store incredibly sensitive data, making them prime targets for hackers. The potential for identity theft and exploitation is sky-high. It's like building a vault full of gold in the middle of a busy street and expecting it not to be robbed.

A Pandora's Box: The use of biometric data processing is vague and fraught with potential abuses. Biometrics are not just passwords; they're an intrinsic part of our identity. Once this data is compromised, you can't just change it like a password.

Unintended Consequences for Minors: The idea of collecting selfies from children and keeping them on porn sites for six years is deeply troubling. This isn't just a privacy issue; it's a safeguarding nightmare. It's like marking every kid's door with a bright sticker, saying, "I'm underage."

This effectively creates a register of adults' porn preferences. This is not just a privacy nightmare but also a potential tool for blackmail and discrimination. It's akin to publishing everyone's diary and then leaving it in the town square.

The sheer scale of enforcing this kind of regulation is mind-boggling. It's like trying to count every star in the sky with a telescope from your backyard.

Such a move would set a dangerous precedent for internet freedom. It's the digital equivalent of requiring ID checks at every corner of the city. The internet's strength lies in its openness and relative anonymity.

Do we really want to trust porn sites with such a level of personal data? It's like entrusting the fox with the keys to the henhouse.

The potential for abuse and misuse of this data by both the sites and potentially by the government or other entities is huge. It's a slippery slope towards a surveillance state.

The ethical implications of such a system are profound. It's not just about privacy; it's about dignity, consent, and the right to a personal life.

In conclusion, while the intention of protecting minors is commendable, the "Nightclub Bouncer" plan is a textbook example of a poorly thought-out solution that creates more problems than it solves. It's a sledgehammer to crack a nut, where the sledgehammer also happens to be made of dynamite.

Best,

A Concerned Citizen

Subject: Online Safety Code consultation

You don't often get email from [REDACTED] [Learn why this is important](#)

Hello,

I wish to submit my feedback to the Online Safety Code consultation. I am not someone who works in law or professional websites. I am just an Irish citizen who uses the internet.

The idea that I would have to submit my passport to Twitter to use it, just because they won't remove automated porn bots, is absolutely demented. I don't trust them with my personal information as they are clearly being run into the ground by a fool who is firing everyone who would protect my ID from being stolen, but it is the only way I have to communicate with many friends and professional contacts.

And as for actual porn sites, the principle of the government keeping a record for years of citizen's sexual preferences is incredibly creepy.

Subject: Draft Online Safety Code

[You don't often get email from [REDACTED] Learn why this is important at <https://aka.ms/LearnAboutSenderIdentification>]

To whom it may concern,

As an EU citizen, I am deeply concerned about the Coimisiún na Meán's proposal for customer identification methods that would be required of certain video platforms.

- It infringes on the privacy of every person who would consume this content
- By being a completely decentralized solution, it exposes anyone who would register to identity theft.
- This proposal justifies itself with the safety of children. To my knowledge, a solution such as this is not proven to improve that safety. Furthermore it sets a precedent for future proposals that could further erode our already fragile privacy.

It is my opinions that many other solutions exist to limit children's access to pornography. Requiring websites to host under a specific TLD like .xxx would allow easy blocking of those domains by parents in their own homes. Parents could be educated on how to properly and responsibly introduce their kids to internet access. These are just of the top of my head.

I imagine this commission will receive many emails like this one in the coming days and weeks. I hope you will take the concerns seriously and back down from further eroding our right to privacy.

Sincerely,

Daniel Litvak

Subject: Regarding draft of Online Safety Code

Du får ikke ofte mails fra [REDACTED] [Få mere at vide om, hvorfor dette er vigtigt](#)

Specifically regarding age verification for viewing of pornographic content.

I strongly suggest you reconsider your thoughts on how important age verification for viewing pornographic content actually is for society.

To even suggest requiring every user to upload biometric and photographic identifiable data of themselves, simply to view content, is ridiculous.

It means that many private companies suddenly have highly sensitive data on citizens, that they otherwise would not have.

It opens citizens to multiple, grave risks.

Risk of privacy loss. We have seen countless examples of operators not being able to securely store users data. This data will be leaked and subsequently misused.

Since this is in relation to viewing of pornographic material, the privacy loss of a data breach cannot be understated.

Risk of third party surveillance. It puts citizens at great risk of surveillance, since sensitive data is often passed or sold to third parties, even when it is prohibited.

Risk of identity theft. It goes without saying, that biometric and photographic identifiable data can also be used for identification purposes, opening up a citizen to a whole host of crimes related to identity theft.

Once this data has been breached, sold or passed on, the damage to the citizen is done and cannot be undone. Therefore: requiring and storing biometric and photographic data for age verification alone, is a completely disproportionate requirement, compared to the harm it tries to mitigate.

It is not compatible with the fundamental principle of necessity and proportionality under EU law.

It is simply not an important enough problem in itself, that underage people will sometimes view content that is not age appropriate.

Sadly, your proposal also opens up the suggestion of using the same requirement of age verification for other, non-pornographic internet content in the future. This is a clear path to near total loss of privacy for the individual citizens, for being allowed to use the internet.

Shame on you for considering such draconic measures which are not compatible with the fundamental rights of EU citizens.

Regards, Rasmus

Dear Jeremy,

I read with horror the proposed plan to ask people to submit ids and selfies before they could access adult or any websites that allow people to share videos. This means that Facebook, Twitter, YouTube, TikTok, etc would have to conform to it.

This is such a bad idea. Here's just some reasons why:

- Data mining of sensitive information
- Ability for dodgy websites to blackmail people
- Risk that big websites would shut down in Ireland rather than comply with onerous rules

Please reconsider.

Yours sincerely,

Claire Bradley

Subject: Media Commission plan to introduce a code of conduct to control how adults would access websites.

[You don't often get email from [REDACTED] Learn why this is important at <https://aka.ms/LearnAboutSenderIdentification>]

Dear Sirs,

Having just read about this plan, I would like to express my strong disagreement and dislike of this plan.

Forcing adults to send any details to view any website is an absolute disgraceful idea, especially if it includes our passport and a selfie to verify our identity.

Do not go ahead with this disgusting plan, as presented by Mr. Godfrey.

Regards,

Subject: Video sharing identity verification plan

You don't often get email from [REDACTED]. [Learn why this is important](#)

Hi,

I am reading this proposal and I don't think it is at all workable in the real world. I am an IT professional with 25+ years of experience and I can't see how this helps protect children by them sharing identity documents with websites. I am a parent of 2 children myself and I don't think this will help nor work to achieve any of the goals of identifying the ages nor protecting children. In fact the opposite is the case. It will open the doors to massive leaks of personal information on children and it will lead to profiling children an possibly third parties blackmailing children for their biometrics.

I really think this needs a rethink and until a workable solution is developed this needs to be shelved.

Identity verification is a difficult task, technically complex and it's easy to fake identify documents online. I do not see a safe technology solution possible with today's technology and the proposal causes worse harm on more people than the existing problems.

Hi,

I am submitting urgent feedback regarding your plan to surveil and require association of formal state ID and biometric data with citizen's video watching habits online, and to require websites to store history for 6 years. I'm saying this as a software engineer and an individual who was involved with the running of a social network that allows sharing video (Mastodon.ie): this is an overreaching, obtuse, terrible idea that shows a lack of understanding of how the Internet works.

This is a non-solution to protect children from consuming Internet pornography, yet has wide reaching implications for eroding individual privacy, data protection, and making many models of online service essentially inoperable without pumping in engineering power, legal consultation for data protection, and adding the cost of identity verification to small websites which are often community run hobby projects.

Irish data protection solicitor Simon McGarr summed it up best, so please refer here for my in depth thoughts: <https://www.thegist.ie/the-gist-wtf-commission/>

Subject: opposition to online safety code proposal

You don't often get email from [REDACTED]. [Learn why this is important](#)

hello,

I'm writing to voice my concern over the proposed online safety code.

I'm particularly concerned with the idea of "effective age verification to prevent underage users from accessing services not meant for them".

i believe enforcing websites to implement this will impinge on my digital rights, in particular my access to information.

as a tech worker, and having seen previous gdpr leaks and breaches - I simply do not trust 3rd party companies to retain my data in a safe manner in which they can guarantee it is not improperly stored or misused.

the idea of having to submit a government id to watch a youtube video is something I won't do. i dont want a marketing model of my internet persona tied to my real life one and owned by a foreign entity.

Furthermore, I believe implementing this would compel me to use a vpn for all my internet traffic to circumvent this restriction - i assume most would opt for this. those who can't afford to pay for one (which in the current cost of living crisis i imagine is a considerable amount) would be forced to adopt the registration. this could also have a knock on effect of leading more people to circumnavigate the restriction using methods that might actually expose them to even more explicit content through tor network for example, or to use networks that connect their machine in a relay that could be encrypting and forwarding other explicit content.

i ask that you would reconsider an age verification requirement like this that to me feels extremely heavy handed. If protecting the underage is the primary goal, could the government instead focus on education in school and to parents on how to prepare and guide young people on internet usage?

best,
Tristan Hamilton

Subject: Online Safety Code - feedback

You don't often get email from [REDACTED]. [Learn why this is important](#)

Dear Sir/Madam,

I read with great alarm the proposal to have end users and consumers send personal details to video hosting sites in order to prove age. This is, of course, an incredibly irresponsible course of action to prove age. In other areas of technology there is work ongoing to be able to prove credentials anonymously by using tokens in a digital wallet. This seems to be the approach that should be considered here. In no universe would I want to be sending copies of personal identification to global video hosting platforms – the very idea will strike fear into anyone even remotely familiar with online privacy risks. This is an inappropriate and dangerous solution to the problem at hand.

Kind regards,
Clare Dillon

I have to object in the strongest way possible with proposals to require users to provide photographic evidence or other age validation evidence to access any internet platform. The key reason for this proposal is to prevent inappropriate use of internet material by young people. The solution is to require any person buying a smart phone to have evidence of age and any person under 18 found to be in charge of such a device to be liable to prosecution. The proposal to provide photographic or other evidence tramples over the freedom of rights to access any site they like without having to give personal details to site owners that could be used for nefarious uses.

Subject:Objection to Proposed Online Content Regulation

You don't often get email from [REDACTED]. [Learn why this is important](#)

Hello,

I am reaching out to voice my objections to Coimisiún na Meán's recent initiative requiring personal identification and live selfies for accessing certain online materials. This measure, aiming to validate age, poses serious privacy risks, potentially leading to a catalog of users' adult content preferences and the storage of minors' images.

As a professional software engineer, my experience has shown me the inherent vulnerabilities in database systems, heightening the risk of data breaches. A database storing such sensitive information would be a prime target for cyber-attacks, exposing user data and eroding trust in digital governance and security protocols.

The proposed regulation's extensive reach over platforms allowing video sharing is overly broad and could negatively impact a variety of online content, limiting digital expression and innovation. Furthermore, the compliance of this proposal with EU regulations, particularly the GDPR, is highly questionable, as it seems to contravene the principles of data minimization and personal information protection.

I urge a thorough reevaluation of this proposal, considering the privacy implications, the increased risks to minors, and the overall impact on digital rights and freedoms.

Thank you for considering my views on this crucial matter.

Sincerely,
Stephen Laide

Subject: Consultation Response

You don't often get email from [REDACTED]. [Learn why this is important](#)

To whom it may concern,

I wish to raise concerns with the section: Guidance: Age Verification (Sections 11.16-11.21 of the Code) and the code in general.

The suggested use of a passport or other identification document raises several concerns. Considering the amount of data on members of the public gathered by video sites, adding ID would vastly add to this and cause possible harm to members of the public should the video-sharing site have a leak or suffer a cyber attack. Requesting sites to store these documents already increases the likelihood of an attack and puts users at risk of identity theft.

This draft code goes far beyond the requirement of the EU Audio-visual directive, which the EU Commission suggests "could be done by the use of PIN codes". It must be measured against the twin EU law requirements of "necessity and proportionality" under the Charter of Fundamental Rights and the GDPR. From what I can see from the code, it fails under both

If there is an alternative method of meeting the requirement of age restriction (as the European Commission's suggestion of the use of PINs demonstrates) then it fails the test of necessity and cannot be in compliance with EU law.

The code also has to be considered whether creating a distributed database of internet use, including porn preferences, which is what this code will do and not just for Irish users but for all EU adults is proportionate to the aim being pursued by the code. Then we must consider it also requires the additional security risk of sending copies of sensitive personal documents such as passports, as previously mentioned, to platforms such as X and also requiring they perform biometric processing of Article 9 GDPR facial data of both adults and minors. This again breaches the proportionality requirement and puts users at risk.

Subject: Objections to draft Online Safety Code

You don't often get email from [REDACTED]. [Learn why this is important](#)

Hello,

With reference to section 3.4.3 of the draft Online Safety Code document I would strongly oppose age verification mechanisms that require sharing biometric or passport-based verification with VSPS entities. The record of third-party security of personal data is not reassuring and sharing such data without iron-clad guarantees of data safety is a non-runner.

Moreover, while age verification techniques may initially be proposed to protect children from age inappropriate online material, I fear that such techniques will be used to censor information that young people, particularly marginalised young people such as from LGBTQI+ communities, dearly need access to. As a parent of two trans children I do not want a vague sense of 'think of the children' to stifle access for the already vulnerable.

Subject: Draft Code for video
sharing platform

You don't often get email from [REDACTED] [Learn why this is important](#)

I wish to make the following comments and observations.

- Under the guise of "child protection", rules are now being drafted to protect adults from themselves.
- It is clear from your undeniable legislative mandate that you will indeed use the full suite of powers available to you to control and censor social media platforms.
- The Censorship of Publications Acts were used to control media use by the citizens in the early days of the State. The dafter and oppressive measures under this legislation has long been consigned to the trash bin.
- It is unfortunate that we are now returning to State-controlled media use by the public. And given your mission statement, you will relish the implementation of such control.
- A recent ruling of the Advertising Standards Authority on a KFC is indicative of how we are now embarking on a new Puritanism crusade. It was ruled that the portrayal of a Bride and her Bridesmaid eating from a family meal bucket encouraged healthy eating! The ad was banned on those grounds.
- Doubtless, the enactment of the legislation under which you will operate followed pressure from mainstream media and Government. Social media had more freedom. Folk could express unfiltered and unedited opinions. Obviously, this is a political point and clearly your mandate is under the legislation. But, from a historical perspective, I think the point bears mentioning.
- I foresee dark and censorious times ahead. Times that I witnessed as a younger person when the State chose the Catholic Church as its social control partner. It is disheartening that we seem to be returning to another era of oppression - backed by statute and enforced by an zealous Censor.

Please ensure that my comments are considered. And publicly posted in your response to the various submissions.

Larry Dunne [REDACTED].

Hi All

This passport uploading proposal is utterly ridiculous.

There is no reason why any website should be asked to view or store a copy of my personal information in order to view their content. My passport is issued for the purposes of getting in and out of the country not to get in and out of websites.

Simon McGarr has done a much better version of stating the obvious reasons in his piece

here [https://www.thegist.ie/the-gist-wtf-](https://www.thegist.ie/the-gist-wtf-commission/?attribution_id=65993430a48f4d00015dff72&attribution_type=post)

Subject: Respo to public consultation on Ireland's first Online Safety Code
Flag: Follow up

You don't often get email from [REDACTED]. [Learn why this is important](#)

Hi

I would like to make a response to the public consultation o the Online Safety Code.

Specifically, the section on age verification for online video sharing platforms. The proposal to upload to upload official identification documents and to use biometric processing for age verification is unacceptable for the following reasons:

A passport or other form of formal documentation is a document that we are always encouraged to keep safe and secure. The loss of such a document can provide enormous problems for the holder - identity theft, fraud etc. The proposal would mean that both children and adults would have to upload state identity documents to web sites to access services. This is an enormous risk.

Biometric data is a special category of data and processing under the GDPR - if this data is breached, it is likely to have a significant impact on the rights and freedoms of that individual.

The measure is unnecessary as other less intrusive means of age verification exists e.g. PIN codes that presents less risk. On this basis the biometric processing proposal failed a test of necessity and proportionality under EU law.

It is highly reliant on the Data Controllers I,e. individual web sites being able to keep data safe and comply with the GDPR. Each point where data is uploaded is a potential point of a data breach. Large well funded companies have already been subject to data breaches - it would be highly optimistic if not impossible for smaller platforms to have the required security and processes in place. It would be highly optimistic that some services would not sell their data to third parties.

The definition of age appropriate content is weak and can be broadened, This is a key concern as could impact the rights and freedom of people, or sections of the community, to access content and information.

The consultation references biometric processing for access to "pornographic" content (also lacking in definition). In doing so, a database of sexual preferences of people would be created which presents an unnecessary risk to rights and freedoms of people and presents a risk to society as a whole. Any database of this nature will this will be breached - it is not a matter of "if" but "when"

I would urge you not to proceed with this proposal,

Thank you

Brian Daly

Subject: Consultation on binding rules for video-sharing platforms to keep adults and children safe online
Flag: Follow up

You don't often get email from [REDACTED]. [Learn why this is important](#)

Hello,

I wish to comment on the proposed binding rules that have been put forward by Coimisiún na Meán.

I wish to prefix this by stating that I am a Chartered Software Engineer with 27 years of professional experience. For most of the last decade I have been working as a senior engineer in one of the world's largest software multinationals. My role involves the handling of sensitive personal data which is governed by the various data protection laws in the jurisdictions where the company does business, including the GDPR (where such data is categorised as special category data), various US and Canadian laws (where it is categorised as PII) and other similar frameworks worldwide. I say this so that you understand that the engineering aspects of the technologies involved, the legal aspects, and the ethical aspects are all very familiar ground to me professionally.

My comment is simply this: Do not do this very stupid thing.

You are proposing, even if you do not appreciate that you are doing so, the creation of an unlimited number of partial copies of a database of biometric data including primary identification documents and photographs of every EU citizen including minors, which will be held in the private sector by companies in various jurisdictions worldwide, several of which have legislation which precludes the possibility of compliance with the GDPR on a fundamental level, and these companies will include those who produce pornography on the internet, as well as those who simply prey on people for money.

None of these actors are ethically suitable data controllers for a database of this kind because of the immense potential for damage associated with its abuse.

As every company will require access to this database to verify authentication attempts - this is a fundamental and unavoidable engineering aspect of this proposal - every company will build a local copy of it over time. How the master database gets built has been left unspecified, but even this enormous body of very legally questionable work is irrelevant compared to the local copying of it by every internet video provider currently existing or which may come into being during the lifetime of this project.

This proliferation of local copies in and of itself would guarantee though a geometric increased attack surface that the contents of this database would be unsecurable, both in theory and in practice. Further, the economic lifecycle of these companies means that each and every one of those local copies could at any time lose its data controller and all security measures should the relevant company collapse. The potential for the firesale of local copies should be obvious in these circumstances, and this is not even accounting for the very real scenario of bad actors registering a video sharing system purely for the purpose of accessing this database, copying it and selling copies of it to third parties.

And the argument that those in this database will all be adults, even if it had merit - which it does not as the GDPR does not cease to protect EU citizens once they reach the age of majority - would be ignoring the minor point that teenagers have a highly predictable pattern of attempting to access pornography while still legally minors. Such an access attempt in your proposal would result in said minors submitting photographs of

themselves - of minors - to companies in an infamously ethically gray industry built in very large part on the exploitation of vulnerable people, including said minors. You would in effect be building a database of leads for grooming for a future industry of Epsteins. Using taxpayers money, no less.

The fact that the proposal does not include any considerations to how this proposal would be enforced - either the detection of noncompliance nor the punishment of the same - indicates a deeply concerning lack of foresight. Which court should have jurisdiction over a video provider accessed from France by a German minor looking at content which was hosted on a content delivery network distributed between the US, Canada, Switzerland, Israel, South Africa, New Zealand and Taiwan, with payment going to accounts in Bermuda via the Isle of Man, controlled by a board of directors who reside in different jurisdictions around the world while working and meeting entirely remotely? What police force will enforce that court's orders on those orders' subjects? How will custodial sentences be possible when those sentenced may simply work remotely from jurisdictions with no extradition arrangements with the jurisdiction in which the court operates?

For a purely hypothetical example, if we implemented your proposed system in all its detail today; how would we imprison Prince Andrew, Donald Trump or Kim Jong Un for viewing child rape videos on liveleak tomorrow?

We have seen a large number of stupid proposals in legal areas governed by the GDPR in recent years by various departments of the Irish government, who seem to regard the creation and unplanned usage of illegal and very dangerous databases as a form of national sport. In each and every one of those cases, when challenged in court these proposals were thrown out with vigor either in Irish courts or higher EU courts or both. The outcomes in the less damaging cases have been wasted time, wasted money and squandered reputations -- in more damaging cases, murder convictions have been imperiled and lives damaged. This proposal is of such an astounding extent both in breadth and in the sensitivity of the data involved as to dwarf these prior examples. The outcome should it be adopted, simply beggars the imagination.

As I said: do not do this very stupid thing.

--

[You don't often get email from [REDACTED] Learn why this is important at <https://aka.ms/LearnAboutSenderIdentification>]

According to <https://www.irishexaminer.com/news/arid-41300860.html> the commission has stated:

People may soon be required to upload their passport details or a selfie to websites if they want to view pornography as part of efforts to help protect children from harmful content online.

This is so horrifically dangerous i can't even figure out which part is the worst to list.

Virtually all of these companies are based outside of the EU. Virtually every single one of them has had significant data breaches, and regularly sells any user information they can glean.

over at <https://www.thegist.ie/the-gist-wtf-commission/>, they conclude that the terminology can refer to *any* site that has video.

This is so remarkably bad I would expect it from the USA.

Ban all harmful content on line not just for children but for adults too. I don't think there would be near as many assaults or abuse if all harmful content was banned. It's the adults that comit crimes of abuse, assault, rape etc not children, therefore it needs to be addressed for all. Social media platforms need to be held accountable, but of course they don't care, so someone else needs to step in and hold them to account.

Subject: Coimisiún na Meán Online Safety Code

You don't often get email from [REDACTED]. [Learn why this is important](#)

Dear Commissioners,

While I do agree that there needs to be more control over how children access online content, the solution is not to hand over responsibility to for-profit companies outside of our nation's or even European jurisdiction. In addition, the suggestion that users must verify their age through transferring sensitive personal data (Government ID and photographs of the user's face) to said companies, or through identity verification services like Jumio, is at best ineffective and at worst a massive security concern for the nation.

As someone who has implemented 3rd Party ID verification for websites (Passport verification etc.), simply put, they don't work very well. The most expensive ones use machine learning to filter out obviously bad submissions (random photos instead of IDs or faces) and then hand over verification to (usually very poorly paid) humans. At the other end of the spectrum, systems are as automated as possible, often optimising for as few false positives as possible (high likelihood of false negative) or as few false negatives as possible (high likelihood of false positive). Websites will use the cheapest possible legal solution with the lowest possible friction for users. Therefore, the only way to ensure a desirable outcome is to either require some sort of accreditation or to build your own and enforce that it be used. Both of which will be prohibitively expensive, with the latter also requiring continuous maintenance and a sizable workforce of manual verifiers. The most likely outcome is that websites simply ignore the requests and remain blocked in the Republic of Ireland. Simply put, an island of less than 4 million adults is not worth the effort.

Whether the service is actually implemented or not is redundant anyway, as bypassing it via proxy, VPN, or simply by finding a site that hosts the desired content and doesn't require ID and isn't blocked will be relatively trivial. Is the plan to catalogue all websites? Block the use of all VPNs and proxies? Even if that were possible, the group of people you're targeting is extremely technically literate and quick to learn new tools, with virtually unlimited free time and they will share any successful methods amongst themselves, and only amongst themselves. Look at internet piracy. The only reason it's no longer endemic is because streaming services became so cheap and convenient, not because ISPs tried to block them or some people got fined.

I do, however, think there is a better solution that will work. Ireland could require ISPs and mobile networks to allow customers to filter traffic for their accounts using a whitelist approach (filters are enabled by default). The interface would have to be simple, and allow enough control to manage different filters for different devices. Additionally, there should be a way to report websites that aren't blocked that should be, and to manually add websites to a block list. Many routers have this functionality in place already, and ISPs already employ those techniques to block piracy websites. While circumvention is still possible through proxy and vpn, because blocking occurs at a device level, it is possible to curate a list that covers these methods as well. In addition to this tool, a public information campaign on how to use it would be necessary.

Thank you for taking the time to read my concerns and alternative proposals.

Sincerely,
James Ryan

Views regarding transparency and understanding for the public

It is acknowledged that the directive and various acts and legislation referred to is extensive and complicated.

- To assist in lay members of the public understanding of the code, it would be extremely useful for the code to include flowcharts and infographics to explain the various sections overall of the code, and for each area of the code.

Views on the definitions of illegal content and regulated content

Re section 10 of the draft code and the definition: “regulated content harmful to the general public” means: - content containing incitement to violence or hatred directed against a group of persons or a member of a group based on any of the grounds referred to in Article 21 of the Charter of Fundamental Rights of the European Union, namely sex, race, colour, ethnic or social origin, genetic features, language, religion or belief, political or any other opinion, membership of a national minority, property, birth, disability, age, sexual orientation.

And re section 10 reference to: “- content consisting of pornography. - content consisting of realistic representations of, or of the effects of, gross or gratuitous violence or acts of cruelty.”

- Can the code provide guidance of when gross or gratuitous violence or acts of cruelty against humans and against those of a particular sex eg woman, or race, or age, will be also be acts of incitement to violence or hatred? We have seen dramatic links between consuming gratuitous violent pornography against women and real life violent and sexual assaults on women and girls. Recent research shows that over 50% of internet hate speech is against women. Can the guidance provide more context of what pornography and gross or gratuitous violence or acts of cruelty will be considered incitement to hatred and violence?
- Can the code provide more guidance on, and / or a definition of, and examples of, incitement to violence or hatred on the basis of, in particular the following as these definitions seem very wide ranging and would assist the public to understand what that may include. This wide definition was brought in for broadcasters too in directive and 2022 act, and they are vastly extended areas compared to previous laws and an explanation would assist:-
 - Sex
 - Religion or belief
 - Political or other opinion
 - Property
 - Birth.
- Can the code define incitement to violence
- Can the code define incitement to hatred
- Can the code define hatred
- Can the code define pornography
- Can the code define gross or gratuitous violence
- Can the code define gross or gratuitous acts of cruelty.

Complaints

11.30 Video-sharing platform service providers shall handle complaints in a diligent, timely, non-discriminatory, and effective manner

- Can the code provide maximum time limits as to what will be timely handling?

Reporting

Re 13 and 14. Supervision and Enforcement of the Code

- To what extent will the Media Commission publish complaint reports, supervision and enforcement action?

Subject: Submission on Online Safety Code

You don't often get email from [REDACTED]. [Learn why this is important](#)

For the attention of: Caroline Keville.

Personal note

I am writing this submission in a personal capacity, but I have spent the last 20 years working professionally in the fields of Software, Anti-Virus, Anti-Spam, Cybersecurity and Threat Intelligence.

I have never worked directly for any advertising, social media, video hosting, or content moderation.

In addition to security, I have worked in telecoms and mobile phone adjacent fields.

I am a father of two daughters, so I am very much aware of child safety issues. I don't allow them to have a smartphone.

While many of the measures are welcome, I have some serious concerns with this proposal and the approach being taken to age-verification.

See my response below.

Kind Regards,

James O'Connor.

Public Response

Regulation of feed algorithms, better classification of content and reporting mechanisms are welcome, but I have serious concerns with the proposed age-verification methods.

8. What is your view on the requirements in the draft Code in relation to reporting and flagging of content?

If one takes an adversarial mindset to the problem of regulating user-generated content, we quickly see a number of problems:

- Malicious users can flag legitimate content as a form of attack
- Given the scale involved, VSPS providers will never have enough human resources to carefully adjudicate all flagged content
- Therefore, in this model, we will have to suffer either overly censorious automated moderation, or accept that some inappropriate content will pass through
- Taking a traditional media approach to user-generated internet content fundamentally won't scale and is never going to be sufficient to protect children from harm

- A fundamentally better approach would be to focus on applying filters, blocks and parental controls on the device/app/browser level, in combination with automated content negotiation APIs supplied by VSPS providers.
- This has the added benefit of being effective on all websites/platforms, even those outside the reach of the Irish state

9. What is your view on the requirements in the draft Code in relation to age verification?

Requiring users to be logged-in and age-verified to see content poses a grave threat to online security. The suggestion that passports, biometrics and live selfies be used for the purposes of age-verification is very problematic, for the following reasons:

- Mandating a theoretically secure, privacy preserving, GDPR compliant age-verification service, without any help from the state, or detailed suggestion for how it could be implemented, is akin to a transport regulator mandating an un-crashable car. It does not acknowledge the high likelihood that this sensitive data will be mis-handled and miss-used.
- Cybersecurity professionals have been warning users for years not to upload sensitive documents to random websites, and to guard passwords carefully. However this proposal will normalize this process and users will get used to uploading their passport, biometrics at will. They will also become more used to being prompted for login credentials, two-factor codes etc... making the scammers job even easier.
- Ordinary users will have no way to discern a legitimate, regulated platform requesting age-verification, from an unregulated phishing site that looks identical and asks for the same data
- Legitimate, regulated platforms suffer data breaches on a frequent basis. The combination of confidential documents, biometrics cross-referenced with adult material preferences, will be an irresistible target of attack. Hand-waving about robust GDPR compliance will not change this fact. At state levels, it also becomes a source for potential blackmail and leverage for future governments and generations of upcoming political actors. This is not hyperbole; history is full of such examples.
- The proposal ignores the elephant in the room: regulations enacted in Ireland cannot be enforced worldwide, or even in Ireland. This causes more pragmatic approaches, like on device controls, to be left on the table.

The proposal makes no reference to any of the following obvious considerations:

- VPNs
- Proxy Servers
- Bittorrent
- Platforms beyond the state's reach
- Data Breaches
- Phishing
- Security
- The chilling effect of age-verification

A pragmatic, user-centred approach should acknowledge the limitations of remote age-verification, and tackle the problem where it can best be addressed:

- Parental education and responsibility
 - More robust, better tested parental controls built into Operating Systems, Browsers, Applications and Devices for on-device age enforcement by parents
 - Open, automated standards for content annotation, negotiation and filtering, which don't require manual human interaction on a per platform basis.
- These should also be applied to advertising preferences on behalf of the user.

The world's websites can't be controlled, and network based blocking is less and less effective due to advances in encryption protocols such as TLS+ECH.

The only viable, long-term, privacy preserving solution is effective on-device controls.

The proposal should specifically address cybersecurity considerations, with input from other government departments such as the NCSC, Gardai, etc... as needed.

10. What is your view on the requirements in the draft Code in relation to content rating?

We should orient towards the following methodologies of keeping safe online:

- Personal filtering vs un-publishing at source
- Robust filtering and parental controls at the device/operating system/app/browser level
- Regulate device manufacturers to create parental controls that are actually effective and well tested
- Encourage standardized, automated machine readable protocols for annotating and filtering content.

For example, using HTTP headers, HTML tags, or JSON fields to categorize content and age suitability.

This allows efficient filtering and blocking at the browser/device level without user intervention.

Subject: Online Safety Bill Concerns

You don't often get email from [REDACTED]. [Learn why this is important](#)

Good Afternoon,

I am writing with concerns in relation to the proposal to require passports or other official documentation to be used for online age verification purposes.

Implementing such legislation would be a huge error and would badly damage Irish citizens and residents, the Irish economy and the Internet/WWW in the EU.

The primary concern is in relation to Irish Internet users having to provide companies with sensitive data, and then require those companies to store and secure that data. Not only does this likely contravene multiple articles of GDPR, but it would put Irish users in harm's way in relation to identity theft and other forms of cyber crime, as well as placing huge burdens on the companies to try to enact the requirements. It is likely that multiple companies will simply stop serving the Irish market, as is happening in certain states in the US.

Any age verification system must, at its heart, protect the user and their PII or other sensitive data and not put that burden on individual companies.

Regards,

Brian

Subject: Consultation on binding rules for video-sharing platforms to keep adults and children safe online

You don't often get email from [REDACTED]. [Learn why this is important](#)

Dear Commissioner,

I am writing to express my concern and opposition to certain aspects of the proposed Online Safety Code outlined in the draft consultation document.

While I understand the aim to protect children and the general public from harmful content online, I am worried that some of the proposed measures could have unintended consequences and negatively impact freedom of expression, as we've seen in other countries.

Specifically, I am concerned about the following:

- The UK previously proposed similar regulations in its Online Safety Bill but ended up scaling back the scope significantly due to criticisms that it posed threats to civil liberties. They focused more narrowly on clearly illegal content.
- Requiring age verification through passports or other official ID poses data security and privacy risks, as Canada learned when developing its Age Verification legislation. Collecting and storing such sensitive personal information should not be mandated.
- Restrictions around legal but potentially objectionable content for adults led to over-blocking in Australia under their Online Safety Act. Legitimate material was caught up in the filters.

I believe Ireland should learn from these examples and take a more measured approach. The code should focus on illegal content and allow adult users to make informed choices about legal material. Platforms should offer parental controls and educational resources but not restrict lawful content intended for adult audiences.

Finally, I want to emphasise the importance of free access to the open internet. Excessive restrictions fundamentally change the nature of the Internet from an open platform for the exchange of ideas to one limited by top-down control. While protecting children is crucial, we must be careful not to sacrifice core values of free expression and access to information that has allowed the internet to thrive. Overbroad content moderation requirements potentially undermine these principles. I urge you to take a balanced approach that protects children without limiting the freedom and openness that defines the internet.

I appreciate you taking the time to consider my perspective.

Sincerely,
Jake

The internet is not paid for by children.

If anything all children should be barred from using the internet. or forced onto a VPN which prevents them from accessing "harmful" content.

I do not support the existence of your organisation, and I do not support you.

Subject:Coimisiún na Meán (Media Commission) code of conduct

You don't often get email from [REDACTED]. [Learn why this is important](#)

In January the Executive Chairman of the new Irish regulator for internet content, Jeremy Godfrey, made himself available for comment to the press to discuss the Coimisiún na Meán (Media Commission) plan to introduce a code of conduct to control how adults would access websites.

He outlined the plan set out in page 17 of their Consultation and proposal document and suggested that his commission would require adults and minors (children under 18) to send a copy of their passport to websites- including porn sites- and then, also, send them a live selfie so the porn sites could see what they looked like right now. And then the porn sites would run biometric data processing on those images (details unspecified) to confirm they were over 18.

Resulting, amongst other things, in an effective register of porn preferences for adults and a collection of selfies of children kept by the porn sites for six years as is required to prove they have complied with the regulation.

I am sure this data would never fall into the wrong hands or be misused. Not to mention that all of this personally identifiable information and sensitive data points would be hosted on American-owned datacentres, with no guarantee they are located in the EU.

Anyone who breaches that website's database is now going to learn not only what videos RandomUser782 has watched but also who they are, where they are, their birthdate, and what they look like; and if they chose to prove their identity via driving licence, also, their home address.

In other words, mandatory age verification requires mandatory data collection, and strangers are going to read that data: some first-party websites will be forced to collect more information than they currently do; third-party websites involved in the collection and verification processes will collect data as well; and the government will get information about the citizens' internet habits from websites. Adults will lose their privacy because people who have no business knowing their internet habits will know them.

Children will lose their privacy, and more. They will grow up learning that it's normal to give their personal information (including but not limited to relatively immutable biological details such as faceprints) to strangers. They will grow up learning that it's normal for the government to know every website a person visits online. The offline analogue is for the government to know every building a person visits offline. No matter how noble the current government's current intentions may be, a stranger has by default no right to know that much about a person's life.

Making every website collect information the way a bank does is applying a hammer to problems that are not nails. Don't make the entire internet a bank or to put it another way "The Internet Is Not Disneyland; People Should Stop Demanding It Become Disneyland".

"Are you at least 18? yes no" paired with proper parenting/caretaking can go a long way. Proper caretaking is not simply knowing what the child does on the internet. It's knowing that the child might visit the internet while the caretaker is occupied. It's teaching the child early on that not all websites are for children. It's setting up parental controls while understanding that parental controls are imperfect, like one slice of Swiss cheese (referring to the Swiss Cheese Mode of complex systems and weaknesses).

You are a Swiss cheese layer. By teaching your child what to do if they stumble upon the wrong websites, you will be turning your child from a hole into their own Swiss cheese layer.

When you find out that your child stumbled upon porn, you can talk to your child about the incident.

As a caretaker, damage control is a necessary part of determining healthy boundaries.

Additionally, I don't expect the damage to a younger child from accidentally viewing porn to be as proportionately severe as the damage to a teenager from drinking alcohol. You can't talk brain damage from drugs out of someone. But I'm assuming that you can talk the harm from an accidental porn incident out of your child.

Ireland has a long history of data scandals. Some that spring to mind is illegally keeping phone records for years (knowingly in violation of EU law) then illegally accessing them (in violation of Irish law) and then using them in multiple convictions, using medical and school records to pressure parents of disabled children to settle court cases against the state when most vulnerable, and secretly recording all calls to police stations including non-emergency numbers likely to catch whistleblowers.

There is also a further reminder that the legality of the Media Commission's underlying legislation was questioned by both internet firms and the EU Commission, and that the Government replied by trying to mislead the EU Commission and then dashed to put the legislation through. Never mind the fiasco around the PSC card and biometric data.

Protecting children is the emotional push for introducing age verification requirements. Video sites are the wedge into all internet sites. The legislators' emphasis on porn is a wedge into any speech, including otherwise legal speech, the government claims is harmful for children.

That government-mandated age verification would protect children is an assumption, full of uncertainty of the beneficial first-order effects and full of ignorance or blindness of the obvious detrimental second-order effects.

Government-mandated age verification is burdensome to small websites, especially small platforms for user-generated content. If a website could choose to remove potentially harmful content instead of verifying age, then the burden would still be too large for small websites. They might as well not host user-generated content at all. Large internet companies like Google and Facebook would eat the costs either way.

Small websites would have to rely on third-party age verification services. Software for age verification will be predominantly proprietary or not available to the general citizen or both, so the average person won't be able to know how much information the websites collect and store. What's more, lawyers, and judges in privacy-related or accuracy-related court cases (especially regarding biometric verification) will have a hard time examining the software.

Porn has a negative effect on children, but much less than something like TikTok. I could at least see the sense in banning children from the entire internet or limiting their access in some way (preferable implemented by ISPs rather than individual websites) but trying to specifically stop them from seeing naked people is pointless.

I think the .xxx top level domain plan from a few years ago was about the best version of this legislation that could exist - essentially adult content would be limited to a certain subset of blockable top level domains. If a site is showing adult content and not on an adult domain, it risks a state-level block until it's compliant.

This seems much easier to police, gives 80% of what the legislators are trying to achieve, and doesn't require entrusting personally identifiable information to a number of third-party un-validated websites.

In summary if the extreme shortsightedness of any sort of ID verification laws that require that each individual company verify and store identity documents themselves cannot be seen as anything other than a hacker "data breach dream", then I don't know what to say.

How will you look to change and challenging this poor attempt at validation and control?

Richard Griffiths

Subject: Online Safety Code - Public Consultation

[You don't often get email from [REDACTED] Learn why this is important at
<https://aka.ms/LearnAboutSenderIdentification>]

To whom it may concern,

I have no doubt that the draft code has been prepared with the best of intentions but I must point out that given the experience of other jurisdictions we know that many of the proposals are unworkable. Age verification is fraught with privacy implications and the UK failed in its effort to implement. It's absolute fantasy to believe that if a large market like that couldn't make it work a small market like Ireland will.

The realistic outcome from implementing age verification as proposed will be that Ireland will simply be geoblocked by the various video sharing sites.

Perhaps this likely prohibition on various content is the intention but the net result will be that savvy users will use VPNs to access regardless.

Kind regards,
David

Dublin 4

18th, January, 2024

Dear Ms Keville

Re: Association of Advertisers Response to Consultation – Online Safety

The AAI appreciates the opportunity to respond to this consultation under the following sections contained in the Annex, reference:

- Draft Online Safety Code
- Draft Statutory Guidance
- The Proposal to Apply the Draft Code to the Category of Video-sharing platform services
- Draft Supplementary Measures and Guidance

We have addressed question 1 in the list from Appendix 4 and this is attached.

The following represents our response to the overall consultation and we would be happy to discuss this with you and your colleagues should you need any clarification.

The Association of Advertisers in Ireland (AAI) exists to serve its members. The challenges faced by Marketers are what drive the AAI agenda and priorities.

The AAI is the only body that represents brand owners advertising in the ROI. We empower them to understand the industry and shape its future because we bring together a powerful community of marketers with common interests; lead decision-making with knowledge and insight; and give a single voice to advocacy for the improvement of the industry.

Today, digital advertising constitutes the world's largest advertising medium, representing over 50% of global advertising spend. In the ROI, the majority of growth in 2024 will once again be attributable to digital advertising which is forecast to grow by 5.1% to €779.3 million, giving it an overall average 58.4% share of advertising market.

However, the continued proliferation of illegal and harmful content continues to threaten online safety for consumers and businesses alike. AAI therefore welcomes Coimisiún na Meán's ambition to publish this draft Online Safety Code in order to foster a safer, more trustworthy and more transparent online environment, including the interests of children.

We believe that meaningful change is needed across the whole online ecosystem to promote digital safety, protect fundamental rights and ensure consumer protection, all while improving the efficiency and competitiveness of the digital economy.

Advertisers are committed to ensuring that their ad spend does not inadvertently fund the spread of illegal and harmful content. However, the way that online advertising is bought and

placed is complex, which means advertisers often lack the transparency needed to understand and control where their ads are placed and what types of content they are ultimately funding.

This is why AAI members have long called for platforms and publishers to take action and employ 'comprehensive and rigorous safeguards' to limit which accounts and channels can host and benefit from paid advertising.

The AAI are members of the World Federation of Advertisers and one of their predictions for 2024 addresses responsibility. Smart marketers will put responsibility at the top of their KPI's in 2024 whether that relates to how they select their purpose, their influencer partners or the media platforms they use as they seek to protect brand value.

Brand owners realise the responsibility they have (to people and planet as well as shareholders) and the accountability they face and will put an increased focus on "being a better brand."

The AAI welcomes this draft Online Safety Code and whilst we recognise that this draft is moving from an era of self-regulation to effective regulation, we would like to take this opportunity to refer to the AVMSD article 4a which states: "*Member States shall encourage the use of co-regulation and the fostering of self-regulation through codes of conduct adopted at national level in the fields coordinated by this Directive to the extent permitted by their legal systems.*"

The AAI and the wider advertising industry in Ireland has a proven track record of success in working with regulation, co-regulation and self-regulation.

Advertising self-regulation has numerous advantages for both consumers and businesses, and a very strong tradition in Europe. We support the view that advertising self-regulation works best within a regulatory framework and look forward to a continuation of this practice when this consultation process concludes.

Finally, I would like to follow up on an e mail in February 2023 to Celene Craig and Declan McLoughlin entitled, "Privacy, Publishers and Advertisers". The AAI would welcome the opportunity to collaborate with Government and is open to any suggestions in order to progress if feasible. The best results come when business and Government work together, not independently. Build consensus and collaborate on policies and standards to deliver results that push us to a more just, secure and thriving society.

Once again, on behalf of all members of the Association of Advertisers in Ireland, thank you for the opportunity to participate in this consultation. Should you have any queries please do not hesitate to contact me.

I should note that dentsu are the media agency who will be available to address any media specific details/queries in the event that you need assistance in this regard. dentsu and the AAI have made joint presentations to the BAI personnel over the years. Contact in dentsu is Liam McDonnell, CEO, [REDACTED]

Yours sincerely

Barry Dooley
Chief Executive

Coimisiún na Meán Cosultation Questions

1) Do you have any comments on sections 1-9 of the draft code?

Reference Objective 3 page 40-42, sections 4.17- 4,22:

Statement of support: The AAI supports that the Commission will be guided by a number of well-established principles in its interpretation, application and enforcement of this code.

The principles highlighted are effectiveness, practicability, transparency, fairness, independence and consistency.

We believe these will contribute to the Commission's objective of improving user safety online and will also help advertisers better understand what safeguards are in place to reduce the monetisation of different types of content across different platforms, and how well they are working. These will also improve competition in the digital economy by feeding into the way that advertisers assess which platforms and products to invest in.

January 17th, 2024

Council on Technology and Social Cohesion

18 January, 2024

Coimisiún na Meán
Dublin, Ireland
Contact person: Caroline Keville
Email: vspsregulation@cnam.ie

To whom it may concern,

RESPONSE TO CALL FOR CONSULTATION ON DRAFT ONLINE SAFETY CODE

We are pleased to respond to the invitation to submit responses to consultations on Ireland's draft Online Safety Code. We greatly admire the commitment of the Coimisiún na Meán to produce policies which reflect a diversity of viewpoints, in order to best fulfill its role in ensuring that Irish citizens have a safe and healthy online experience.

We are the Co-Chairs of the Council on Technology and Social Cohesion¹, a coalition of technologists, academics, policy influencers and peacebuilders with a shared goal of influencing how technology is designed and deployed to foster social cohesion rather than polarization and violence. In particular, we focus on exploring the promise of design-focused approaches to mitigating online harms and fostering healthier societies. In preparing the content for this submission, we consulted with the members of our Steering Committee², who are actively engaged in advising policy-makers on this important area of tech policy across the globe.

¹ www.techandsocialcohesion.org

²The Council on Technology and Social Cohesion brings together technologists, academics, policy-influencers and peacebuilders to influence the way technology is designed and deployed to foster social cohesion rather than polarization and violence. The members of the Steering Committee can be found here: <https://techandsocialcohesion.org/who-2/>

Our submission responds to the supplementary measures set out in Appendix 3, in particular the guidance on recommender system safety. This is of particular interest to us because of the reference to how these measures could reduce the risk of harm being caused by how recommender feeds aggregate and deliver content to users, and the risk that may arise from recommender feeds which contain harmful content.

Our input responds to Consultation Question 28: *“Is there anything you consider Coimisiún na Meán needs to be aware of in relation to the draft supplementary measures and draft supplementary guidance as it further develops its thinking in these areas and seeks to effectively fulfil its mandate in relation to online safety?”*

Our responses refer specifically to section 1.3 on page 77 and section 2.3 on page 79.

The draft Code proposes to enable the user to disable the algorithms that build user profiles for video-sharing platforms. It also recommends that safety impact assessments are done for a wide range of recommender algorithms and that the platforms take *“reasonable, proportionate and effective measures to reduce the risk of harm (in particular to children) being caused by how recommender feeds aggregate and deliver content to users and to take measures to reduce the risk that may arise from recommender feeds which contain harmful content, on their own or in aggregate.”*³ The draft Code further recommends that platforms *“prepare, publish and implement a recommender system safety plan that includes effective measures to mitigate risks that their recommender systems may cause harm”*⁴.

These are important steps in recognizing how algorithmic amplification is a far more robust and legitimate way to address platform impact. Recommender algorithms are most often driven by what users watch the longest or comment on most. As such, these algorithms shape the user experience, and often drive users towards divisive and harmful content.

³ 2.3 Recommender Feeds (page 79)

⁴ 1.3 Recommender System Safety (page 77)

Meta’s own internal research⁵ reported that “64% of all extremist group joins are due to our recommendation tools...Our recommendation systems grow the problem.” However, simply enabling the users to ‘start over’ and thus prevent the algorithms from recommending content will likely have unpredictable effects given that algorithms also insulate users from spam and other negative experiences. Removing algorithms bypasses opportunities to **improve** algorithms so that our digital experiences are even more positive.

As members of the Council on Tech and Social Cohesion, we call this menu of options to reform algorithms prosocial tech design governance⁶. Prosocial tech design governance goes beyond the binary approach of turning algorithms on or off. It’s about reimagining these algorithms to encourage constructive, socially cohesive interactions.

Prosocial tech design governance advocates for tech products that affirm social norms of human dignity, building trust across diversity rather than polarization and fear. This approach is embodied in frameworks like the USC Neely Center Design Code⁷, which proposes standards for social media platforms that prioritize societal well-being over mere user engagement. It is akin to a “building code” for social media platforms, with nine specific, content-agnostic minimum standards, based on the most effective practices from within tech platforms (aka “Break the Glass” measures⁸).

For example, rather than banning algorithms that can amplify misinformation, we can instead **reform** them so that trustworthy information has an advantage. We can make it harder for small groups of people to manipulate the system; remove engagement incentives⁹ so that people don’t get more distribution for being more sensational; increase privacy protections¹⁰ for authoritative sources discussing events online; and prioritize accounts that have positive, trustworthy histories¹¹ over

⁵<https://www.wsj.com/articles/facebook-knows-it-encourages-division-top-executives-nixed-solutions-11590507499>

⁶ <https://www.techpolicy.press/toward-prosocial-tech-design-governance/>

⁷ <https://docs.google.com/document/d/1RkyeT8m94uHnftuahdctrmn6vF-AeCXUi7YbxB5mU4g>

⁸ This refers to emergency measures whereby platforms act swiftly to mitigate the effect of harmful content, such as limiting the amount of shares or posts by users.

⁹ <https://about.fb.com/news/2021/02/reducing-political-content-in-news-feed/>

¹⁰ <https://www.euronews.com/next/2021/08/20/facebook-steps-up-security-for-afghanistan-users-so-they-can-hide-their-identities-from-th>

¹¹ <https://apnews.com/article/the-facebook-papers-covid-vaccine-misinformation-c8bbc569be7cc2ca583dadb4236a0613>

brand new accounts that are created to monetize the moment. In place of simple engagement optimization, we can insist that companies prioritize content that is seen as explicitly high quality across diverse user groups¹². These methods have proven useful enough that many have asked why they are ever turned off¹³ and some have been adopted permanently¹⁴. These recommendations could be integrated into Irelands Online Safety Code, rather than hoping that the platforms will themselves propose this as part of their own 'recommender system safety plan.'

The path charted in the draft Code is commendable, but it is hopefully only a start. The real opportunity lies not in eliminating algorithms, but rather in harnessing the power of technology to build bridges rather than walls. The Prosocial Design Network¹⁵ hosts a library of evidence-based design interventions and New_Public's Community by Design¹⁶ offers 200 examples of spaces designed to build trust.

These examples demonstrate how tech companies can re-engineer algorithms to surface common ground and promote understanding among diverse groups, a crucial step towards mending the social fabric torn by polarizing content. Rather than removing algorithms altogether, we suggest regulating them to be built in ways that empower users and ultimately improve their impact on society.

We recognize that this adds to the complexity of an eventual Online Safety Code. One step forward could be to elicit the perspectives of the Irish users of these platforms, in order to derive aspirations of how they would like to see these platforms influence their lives. The Neely Center Social Media Index¹⁷ is one example of how a survey of users' experiences across all platforms, surfacing what experiences they've had they perceive as good and bad for themselves and the larger community. While this may not need to be included in the Online Safety Code, such surveys of users could be a powerful data point in addition to what the platforms provide in their own safety plans to guide the Commission in future.

Finally, we would like to once again congratulate the Coimisiún na Meán on its efforts to consult widely in the development of this important and pioneering policy. As Co-Chairs of the Council on Tech and Social Cohesion, we would welcome an opportunity to offer further input into the design-focused accountability measures that the Code proposes, as well as considerations about its implementation and enforcement. We look forward to following the evolution of your efforts, and salute your commitment to ensuring a safe and healthy online experience for Ireland.

Sincerely,

Lena Slachmuis

Coimisiún na Meán: Consultation on Online Safety

Consultation response from the

Centre for Competition Policy

University of East Anglia, Norwich Research Park, Norwich NR4 7TJ

Date: 19 January 2024

Author:

- Dr Sally Broughton Micova, Associate Professor in Communications Policy and Politics

This consultation response has been drafted by a named academic member of the Centre, who retains responsibility for its content.

The Centre for Competition Policy (CCP)

CCP is an independent research centre established in 2004. CCP's research programme explores competition policy and regulation from the perspective of economics, law, business and political science. CCP has close links with, but is independent of, regulatory authorities and private sector practitioners. The Centre produces a regular series of Working Papers, policy briefings and publications. An e-bulletin keeps academics and practitioners in touch with publications and events, and a lively programme of conferences, workshops and practitioner seminars takes place throughout the year. Further information about CCP is available at our website: www.competitionpolicy.ac.uk

Response

I welcome the opportunity to respond to the plans proposed by Coimisiún na Meán surrounding the online safety code, statutory guidance, application of the code to the category of video sharing platform services, proposed supplementary measures and related guidance. I respond here to only a few of the questions where I had something to contribute either in support of the solution in the draft Code or where I have evidence to support an argument for a change to the draft. As this is submitted electronically, I have included hyperlinks to additional resources and evidence where possible.

2) What is your view on the proposal to include user-generated content that is indissociable from user-generated videos in the definition of content to be covered by the Code?

The definition of “content” in the Code brings together under one term the three items that both feature in the AVMSD’s definition of “video-sharing platform” and in the provisions outlining for what VSP providers should be held responsible. There are “programmes, user-generated videos and audiovisual commercial communications”. The Code’s definition of “content” also includes “user-generated content comprising any text, symbol, or caption accompanying any user-generated video, provided such text, symbol, or caption is indissociable from the user-generated video,” which would seem to cover comments or other responses attached to any videos.

This was not foreseen in the AVMSD but seems a logical inclusion given the ruling of the European Court of Human Rights in the *Delfi AS vs Estonia* case (64569/09)¹, which held online publishers responsible for the comments made on their articles. The organisational responsibility for content established by the AVMSD, which amounts to a kind of procedural accountability, is the parallel to the editorial responsibility of audiovisual media services.² If the editorial responsibility of publishers covers the comments according to the court, then it makes sense that the organisational responsibility of VSPs does as well – with all the limitations that form of responsibility entails.

3) What is your view on the definitions of “illegal content harmful to children” and “regulated content harmful to children”?

The AVMSD requires Member States to ensure that VSPs take measures to protect minors from content that “may impair their physical, mental or moral development”. This is not limited to illegal content, just as it is not for audiovisual media services. It is left to the Member State to determine how to define what content is likely to impair minors in those ways. Making the distinction between illegal content and regulated content seems a prudent

¹ This case file can be found here: <https://hudoc.echr.coe.int/fre#%22itemid%22:%222002-8960%22>

² For discussion of the forms of responsibility see Broughton Micova, S. and Kukliš, L'. (2023) “Responsibilities of video-sharing platforms and their users” in *European Audiovisual Policy in Transition*, Routledge DOI 10.4324/9781003262732-8

response. As defined in the Code, the latter is a somewhat more flexible category that can be adjusted by an order under section 139B of the Act. This would make sense given the nuanced balances required for protecting the rights of children in the digital age and the dynamic nature of the responses needed.³

9) What is your view on the requirements in the draft Code in relation to age verification?

It is very important that the Code make it abundantly clear that self-declaration of age by users is not sufficient for the purposes of age verification and it does this effectively and consistently. However, in paragraph 11.19 that covers adult VSPs “robust age verification” is required **either** on sign-up **or** at each occasion of accessing content. Based on forthcoming research on age-verification requirements across Europe and measures utilized by VSP,⁴ I argue that this leaves a gap, especially if signing-up allows users to create or upload content.

A lack of robust measures at sign up could allow minors to upload content. Given that self-created CSAM is an increasingly significant problem, the option of having anything less than robustness at the point of initial access should not be given in the Code. The most robust age verification measures should be required at sign up. Additionally, at least effective, if not also robust, age or identity verification measures should be required at each occasion of use, to prevent sharing of login details among individuals.

³ See the UN General comment No. 25 (2021) on children’s rights in relation to the digital environment. <https://www.ohchr.org/en/treaty-bodies/crc/general-comments>

⁴ A study authored by Broughton Micova, S. & Kostovska, I. is expected to be published in 2024 by the European Audiovisual Observatory.

FROM: Alex Pigot, [REDACTED]
[REDACTED]

19th January 2024

Dear Coimisiun na Meán/Digital Services Commissioner,

It is my view that

1. All internet platforms be required to collect the names and contact details of any person who posts on their platform, so that this information can be made available to the Digital Services Commissioner if requested.
2. That on foot of a valid complaint by an offended platform user to the Digital Services Commissioner, that penalties can be applied by the Digital Services Commissioner to both the platform and the offending platform user on behalf of the offended user.

My rationale for the above:

Social media facilitates currently the anonymous^[1] posting of hate speech, threatening or untrue posts^[2].

Such postings in many cases would be illegal if published without the cover of anonymity.

Such postings have been the causes of depression and suicide^[3], incitement to hatred^[4], and in the extreme, murder^[5].

This current system of allowing anonymous accounts to be set up, which are hard or impossible to trace is no longer acceptable in an inclusive and fair society such as Ireland where free and fair speech is respected by both government and the people.

^[1] This motion allows for the use of pseudonyms i.e., 'anonymous' online posting (as regards this motion) means the platform (and therefore the Digital Services Commissioner) does not have the contact details for the poster. Where a pseudonym is used, however, while the identity of the poster will remain hidden online, the platform, and if the platform is requested, the Digital Services Commission, has available the identity of the poster.

^[2] <https://www.wordonfire.org/articles/the-dangers-of-digital-anonymity/>

^[3] <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7392374/>

^[4] <https://www.cfr.org/background/hate-speech-social-media-global-comparisons>

^[5] <https://www.forbes.com/sites/petersuciu/2022/05/25/social-media-increasingly-linked-with-mass-shootings/>

Such anonymity must no longer be available.

By the adding of text similar to those suggested in 1 and 2 above to the **Draft Online Code** under the headings '**12. Obligations of Video Sharing Platform Service Providers ...**' and "**14. Supervision and Enforcement of the Code**" the scourge of abuse on online platforms will be reduced, and for those that persist the penalties when applied will ensure they too will take notice of their wrongdoing.

[Note; the above recommendations by me do not obviate a platform user appearing to be anonymous by using a synonym, however should the Digital Services Commissioner require the platform users name and contact details, that must be made available to the Digital Services Commissioner from personal data collected by the platform when the user joined the platform, or in retrospect should this recommendation now be accepted by Coimisiun na Meán.]

Thank you.

Alex.

PS Please see footnotes below:

2. What is your view on the proposal to include user-generated content that is indissociable from user-generated videos in the definition of content to be covered by the Code?

Industry respondents position seems far more sensible, and the inclusion of comments seems like both an overreach and a severe limitation of free speech and expression.

I don't quite understand the point trying to be made by the following:

"For instance, a video depicting a famous member of an ethnic minority might not be harmful in itself but would indirectly lead to harm if it attracted comments that incited to hatred or violence."

In this instance the video needs to be removed because of another person wrote a comment? If so, that seems perverse. If the intention is that the comment itself needs to be removed, then that should fall under free speech law, not online safety codes for videos.

Or is it the case that the video should be moderated in advance because depicting a member of an ethnic minority *might* attract unsavoury comment? That is completely bewildering and devoid of any obvious logic, so assume that is not the case.

3. What is your view on the definitions of "illegal content harmful to children" and "regulated content harmful to children"?

Broadly fine, perhaps not strong enough. You do not treat small children, primary school kids and teenagers the same in any walk of life, and this code should be no different. All advertising to small children is harmful and should be heavily controlled.

As for primarily school and early teens, the most harmful content they consume is from probably from people like Andrew Tate and other influencers. It is tricky to moderate content like this, but influencers work, especially on impressionable young people. This is a societal harm, causing much greater than damage than anything else on the list.

However, banning access to these subjects is nonsensical for older teenagers, and thought needs to be given to how we treat 15–18-year-olds. Allowing someone a week shy of 18 the same access to content as a four-year-old is ridiculous and simply won't work anyway.

4. What is your view on the other definitions of illegal content and regulated content?

Illegal content is fair enough, but regulated content as defined here is almost laughable broad.

"content that incites violence or **hatred against an individual** or group based on sex, race, colour, ethnic or social origin, genetic features, language, religion or belief, political or **any other opinion**,"

What does an incitement of hatred look like? What does hatred look like for that matter? To me, a reasonable reading of that could be something like, 'demonising a group based on an opinion or value they hold is inciting hatred and therefore regulated content'.

This would mean however something like 'I think Liverpool football fans are pricks' could now be considered regulated content. They hold a belief or opinion, and the statement demeans them.

This is clearly absurd. We are supposed to be adults. And this is so wide open to abuse by government to have a chilling effect of speech they don't like. Some political beliefs are themselves incitements of hatred, but who gets to determine that? We see plenty of examples in the world

currently where the existence of a Palestinian flag is deemed anti-Semitic. Who gets to determine this? It has the potential to really stymie debate and balloon into spheres it is not intended.

I strongly think the intention is not to have such silly examples and the intent of the regulated content to protect vulnerable groups. The reality is however, that in real life, and in 2024 the internet is real life, people hold unsavoury opinions and say mean and nasty things. There should be zero attempt the commission to attempt to regulate discourse to this degree.

The entire section regarding regulated content needs to be hugely watered down, and far more explicit in what is and isn't allowed.

9. What is your view on the requirements in the draft Code in relation to age verification?

I think this part of the code is hugely worrying. None the suggestions made by the commission are appropriate and are all fraught with dangers.

A) Document-based age verification, accompanied by a live selfie to verify the identity of the user

B) A live selfie together with biometric age estimation; and

C) Self-declaration together with age estimation based on service usage patterns and the nature of content created by the user

Starting with A, presumably this is a government issued ID? This immediately causes problems, as many people do not have passports or drivers' licences, and so you are disenfranchising them. These people are overwhelmingly poorer, and more vulnerable, and we see this seemingly harmless technique (show government issued ID) used in countries to limit voting rights of people the ruling party do not want to vote (in the US and UK for example), which shows it is indeed disenfranchisement.

Any attempt to introduce some form of online passport system will still run afoul of the same issues as well as being a bureaucratic nightmare.

Also, encouraging people to share drivers' licence and passport info with every website on the internet is appalling policy. Under no circumstances should people share valuable private information with private companies unless they have to. The entire direction internet regulation is taking to secure users data, and instead we are giving far more valuable information to anyone and everyone who asks for it? You cannot possibly ensure that every site on the internet who may show 'restricted content' as laid out by this code, is handling the data correctly. The huge likelihood of attacks and breaches goes up exponentially the more you require this type of verification.

There might be some instances where it works fine (such as by an airline), but it should not be used frequently and not encouraged by companies in any way, shape or form.

B) Again, it can have its uses, for example dating apps use this technique successfully. It doesn't have the disenfranchisement issues of A, and can still be partially anonymous if there is requirement for accompanying documents, it is just a selfie. However, again, you have privacy concerns. Who does the verification? How is that data transferred and stored? Ultimately, what you will achieve here is de facto removing anonymity on the internet, which is not a good idea, and I don't think is the intention of this code.

C) Might have its uses, but you are giving huge amounts of information about an individual to some private company. Google can already profile users quite accurately. But there is a serious question over whether they should be *allowed*. Here, we seem to be suggesting that they do more of it?

I think the third approach has the most merit, and could be vastly improved with the help of the large software companies. But it cannot be centrally managed. For example, Google and Apple (Android and iOS) are already acutely aware of the age and interests of an individual. They could, build into the web browser a mechanism that allows sites to confirm that the owner of the phone is an adult and not block the content. The user wouldn't even have to know this is happening.

It would require the device providing the information to the browsers, and subsequently the browser to the site. The beauty of such a system is that it retains full anonymity. The site trusts the browser, the browser trusts the device, and the device belongs to the person and can ensure robust checks. Also, this could be used absolutely everywhere an age verification is required, not just web sites, but apps, games, movies etc. Input should be sought from the major technology companies, I would be delighted if such a system was introduced and would be happy to give further detail if required.

The best regulation is one that works without you noticing. This technology could also be done on a laptop or pc. Shared computers generally have profiles, which could manage the same thing. There is a possibility that someone underage could access an adult's phone, but nothing is foolproof and everything has gaps.

Ultimately, what people will fear is that the government is watching them, but this could, and should, be implemented by the OEMs.

There is a reason why the systems mentioned are not in use already, none of these suggestions are new. I think we need to be more ambitious. The way we interact with 'the internet' has fundamentally changed since the release of the iPhone and smart devices, the regulations should reflect this.

You don't often get email from [REDACTED]. [Learn why this is important](#)

Dear Caroline,

I hope this email finds you well. Cognisant of the immense work ongoing in relation to the online safety code, I am writing to share information about a funded research project that focuses on the exposure of online risk related to disability - The following are the research questions for this study;

Does internet use pose child protection and welfare use for children with disabilities?

What is the nature of risk in internet use for disabled users who are deemed to pose a risk to children?

I am a PhD candidate in Trinity working on this research project supervised by Dr. Susan Flynn [REDACTED] and Dr. Julie Byrne [REDACTED]

This is a mixed methods study in its third year - the quantitative phase of interviewing young people with disabilities and safeguarding professionals is ongoing whilst the quantitative component will commence shortly.

The following publication is related to this work with further publications forthcoming.
<https://authors.elsevier.com/a/1iMc8hNfKzRni>

Dissemination of findings will occur upon completion. If you have any queries in relation to this work or would like to know more please do not hesitate to make contact.

Kindest regards
Rose Doolan Maher

Foreword

The *Online Safety and Media Regulation Act, 2022*, has brought forward some very significant developments in the online space. The *Act* has created *Comisiun ne Mean*, within which, a new, first time *Online Safety Commissioner*, has been appointed.¹ Ms. Niamh Hodnett, Solicitor, has been selected to fill this role, and is now Ireland's first Online Safety Commissioner.

It is the Commissioners' role to create new online safety codes. These codes will impose new, first-time rules on previously, under-regulated, service providers. In particular, some of these new online safety codes, will focus on children's safety. Ms. Hodnett's team have invited the public to make observations, and submissions, as to the content of these new draft codes.²

It is in this context, and based on our own experience, that we have compiled this document. We have attempted to offer our respectful observations, and submissions, to the current iteration of the draft online safety codes.³

¹ <https://www.cnam.ie/>

³ https://www.cnam.ie/wp-content/uploads/2023/12/Draft_Online_Safety_Code_Consultation_Document_Final.pdf

Introduction and Context

Tusla was established on January 1st, 2014. This saw the amalgamation of the *Health Service Executive - Children and Family Services*, the *Family Support Agency*, the *National Educational Welfare Board*, and a range of services focused on responding to domestic, sexual, and gender-based violence. Tusla is now the dedicated State Agency responsible for improving the wellbeing and outcomes for children in Ireland.

The Agency is a diverse and widespread organisation that operates across 17 geographical regions in Ireland, employs over 4,000 staff, and performs a vital role in the safeguarding of vulnerable children and families.

Tusla has responsibility for the provision of child protection and welfare services including family support. The safety, welfare and protection of children is at the heart of our statutory obligations as set out under legislation, including the *Childcare Act 1991*, the *Child and Family Act 2013* and *Childrens First Act 2015*.

The *Children First National Guidance Policy*⁴, provides that all organizations working with children and young people, are required to create a culture of safety, that promotes the welfare of children and young people availing of their services. *This responsibility includes keeping children safe from harm online.* Tusla works very closely with other voluntary and statutory agencies to safeguard children from child sexual abuse and exploitation.

This Agency has also implemented specific policies and procedures that set out our obligations to protect children from harm. This includes the safety and protection of children online. We have provided ICT and social networking guidance, for staff working with children and young people, including online safety.

At the end of October 2023, there were 5,576 children in the care of Tusla. There were 22,516 cases open to social work with an associated 2,409 mandated reports under *Childrens First* legislation.⁵ Many of these children have been subjected to, or were exposed to varying forms of abuse and neglect. The vulnerabilities of these children are well evidenced through research, including the sad observation that these children are at a higher risk of exploitation. (Please refer to the short *Literature Review* at the end of this document).

In our experience, online safety is an increasingly significant issue to consider when safeguarding children and young people. We have set out specific guidance to our staff in order to assist them to identify, and recognize, circumstances wherein a child may be subject to Child Sexual Exploitation (CSE). In respect of online exploitation and abuse, we also understand that child sexual exploitation can also occur through the use of technology.

In view of the above, this Agency welcomes the establishment of *Coimisiun na Mean* and the associated plans for the development of new *Online Safety Codes for Video Sharing Platform Services*. The proposed safety framework, alongside national and *EU legislation*, will hopefully keep people, particularly children, safer online.

Submissions

Submission # 1 - Age Verification

This Agency notes that it is proposed to create an online safety code, that will oblige online service providers to implement user *Age Verification Measures*.⁶ This is welcomed. The Agency believes that *Age Verification Safety Codes* are necessary to protect children from accessing harmful, even if legal, online content.

However, this Agency asks that the Online Safety Commission consider the following, when drafting an *Age Verification Safety Code*: -

1. Some Video Sharing Platform Services (hereinafter “VSPS”), including online gaming providers, are expressly directed at children. Adult predatory service users, often use these platforms to contact children. They do this by creating false profiles wherein they masquerade as young children.

Accordingly, VSPS providers should be obliged to use age verification techniques to ensure that the age cited on a profile, is the true age of that service user. This would reduce the opportunity for adults of ill intent, to masquerade as children.

2. Further, it is submitted that this proposed online safety code, should also oblige service providers to obtain adequate user contact information. The level of contact data should be appropriate to enable a regulatory body, or An Garda Síochána, to readily identify and contact, users who are suspected of rule, or legislative breaches. The anonymity of service users can often delay and obstruct the proper investigation and administration of justice. This can perpetuate and possibly even create, further risks for children. Accordingly, it is submitted that service providers, operating in Ireland, should also be obliged to retain identification documentation submitted for Age Verification.
3. It is noted that this Online Safety Code will oblige service providers to take steps to ensure that content, such as legal pornography, is not easily accessible by children. This is to be achieved by obliging service providers to implement appropriate age verification techniques.

It is appreciated, from reading the attendant consultation document,⁷ that the Commission may not wish to be overly prescriptive in relation to what technology is used to verify the ages of users. However, there will always be quality variance as to age verification technologies. Children deserve only the highest protections, and these codes should reflect this. Accordingly, service providers should be obliged to use only the highest available technological means of age verification.

Accordingly, it is this Agencies view, that only the most effective technological means of age verification should be used. This should be particularly so, when the online service being provided, is accessible to children. It is understood, at this time, that one of the most effective means of online age verification, is the document-based age

⁶ Page 17, Par. 3.4.3, Consultation Document dated the 8th of December 23.

⁷ Consultation Document dated the 8th of December 23.

verification method, accompanied by a live self-photograph. Naturally then, when an online safety code obliges age verification, in relation to platforms used by children, only the highest means of technological age verification should be used. This should include, the document-based & live self-photograph method.

4. It is positive that this online safety code, will also oblige service providers, to produce quarterly reports, as to how effective their age verification techniques are. This Agency would ask that all data provided by service providers, in this context, is retained, reviewed and, if necessary, published. This will help ensure appropriate levels of compliance.
5. Given the international nature of this sector, and that different rules will apply in different jurisdictions, it is important to clearly define what a “*child*” is. This Agency would support the statutory definition of a “*child*”, as provided in *Section 2(1) of the Education and Welfare Act, 2000*.⁸ Therein, a child is defined as a person who has reached the age of 6, but not reached the age of 18. It is submitted that this definition should be cited in all online safety codes.

⁸ Section 2(1) of the Education & Welfare Act, 2000. <https://revisedacts.lawreform.ie/eli/2000/act/22/revised/en/html>

Submission #2 - Flagging Harmful Content to Service Providers & the Online Safety Commission

Tusla endorses the Online Safety Commissioners proposition, that it should be easy for members of the public, and statutory bodies, to flag content of concern to the service providers.

Further, this Agency also notes, and welcomes, the proposed code, that would oblige service providers to report, to the Commission, the results of their own flagging and reporting mechanisms.⁹

However, this Agency makes the following specific observations, and submissions, in respect of this code, in its current form: -

1. There does not appear to be a clear mechanism to raise a complaint, or flag a concern, directly to the Online Safety Commission. This is problematic. Rather, complaints or referrals, must firstly be directed to the service provider. For this Agency, this may present an obstruction, or impediment, to a more expeditious resolution of an issue raised. Accordingly, it is submitted that this proposed safety code, should also facilitate direct referrals to the offices of the Online Safety Commission.
2. It is submitted that statutory bodies, such as this Agency, should be provided with a direct means of referral to the office of the Online Safety Commissioner. In certain cases, this Agency should be, a) permitted to avoid having to firstly raise an issue of concern with online service providers, and b) be provided with a direct means of contact with the Commission. Accordingly, this Agency, and other relevant statutory bodies, should be assigned the status of a *Trusted Flagger*.¹⁰

As the Commission will note, Tusla is the States primary statutory body, with responsibility to protect and vindicate the safety and welfare of children.¹¹ It is for this reason that this Agency should be afforded a distinct status, and thereby be permitted to flag problematic content, directly and with out obstruction, to the offices of the Online Safety Commission.

⁹ Page 18, Par. 3.4.4 Consultation Document dated the 8th of December 23.

¹⁰ Concept as per *Article 22, of EU(Regulation) 2022/2065 (The Digital Services Act)*. <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A32022R2065&qid=1670837883291>

¹¹ The Child & Family Agency's statutory duties are codified in, *Section 3 of the Child Care Act, 1991, Section 7 of Children First Act, 2015 and Section 9 of the Child & Family Agency Act, 2014.*

Submission #3 - Online Content – Content Harmful to Children

The Agency notes that it is proposed to create an online safety code, that will compel online service providers to take measures to protect children from content, that is harmful to their “*physical, mental, or moral development*”.¹² This is welcomed.

When defining harmful content, it is noted that the Commission will be guided by the provisions of *Section 139A(1) of the Online Safety and Media Regulation Act, 2022*¹³. Therein, two types of content are described, that may be deemed harmful. Firstly, specific criminal offences, as listed in *Schedule 3* of the Act, are included. For example, *Schedule 3*, in conjunction with *Section 139A(1)*, clearly determines that content that breaches the *Prohibition of Incitement to Hatred Act 1989*, can, and most likely will, fall within the definition of harmful content.

Secondly, and of relevance to this submission, the Commission may also designate content to be harmful, if it falls within *Section 139A(3) of the Act*. Therein it is provided that, content that bullies, humiliates etc., **and** causes a risk of harm to an individual, can also fall within the definition of harmful content.¹⁴ This provision, in particular, is most welcome. It provides the Commission with enough scope to include many content types, that may not be statutorily defined, but are none the less harmful to children. This wide definition will not only have broad capture, but will future proof against any technological, and other developments.

Accordingly, it is submitted that the Online Safety Commissioner, pursuant to *Section 139A(3)*, has the authority too, and should, include the following content types, when defining “**harmful content**”:-

- i. The publication, or broadcasting, of any material likely to lead the public, to identify a child who is, or was, the subject of proceedings under the *Child Care Act 1991*.¹⁵
- ii. The condition known as, “*Gaming Disorder*”, has now been identified by the WHO as a disease.¹⁶ Accordingly, content that encourages gambling should be definitively classified as harmful content.

Once content is designated harmful, particularly to children, then its availability can be regulated.

¹² Page 13, Par. 3.3.2 Consultation Document dated the 8th of December 23.

¹³ <https://www.irishstatutebook.ie/eli/2022/act/41/enacted/en/print.html>

¹⁴ *Section 139A(4) of the Online Safety and Media Regulation Act, 2020* establishes the concept of a “**Risk Test**”. This test determines if the content also posed a risk to life, or significant physical, or mental health, where this risk was reasonably foreseeable.

¹⁵ See *Section 31 of the Child Care Act, 1991*. This provision is not cited in Schedule 3.

¹⁶ <https://www.who.int/standards/classifications/frequently-asked-questions/gaming-disorder#:~:text=Gaming%20disorder%20is%20defined%20in,the%20extent%20that%20gaming%20takes>

Submission #4 – “Draft” Supplementary Measures and Guidance

This Agency welcomes the *Draft Supplementary Measures and Guidance* as set out in *Appendix 3* of the proposed code.¹⁷ The guidance offered to service providers is clear and comprehensive. Tusla particularly welcomes the following points: -

- i. Service providers will be required to *publish their methods of child safeguarding*. It is submitted, that this will encourage transparency, and transparency will create robust child protection protocols.
- ii. The obligation to provide *online safety supports, for those impacted by content*, is most welcome. Clearly, it is this Agencies position that this obligation should be particularly acute, when content is directed at, and received by children.

Submission #5 –General Observations

- i. It is noted that it is proposed to give service providers the authority to suspend or even terminate problematic accounts.¹⁸ This is most welcome. However, the provisions as drafted, seem to require repeated and consistent rule infraction, prior to termination. It is submitted that a once-off serious infraction should trigger immediate service termination.
- ii. Tusla welcomes provisions that will oblige service providers to create a content rating for postings.¹⁹ It is submitted that this obligation should be clearly heightened in relation to child centered content, or content easily accessible by children.
- iii. Tusla welcomes provisions aimed at increasing online parental control.²⁰ Parental control will minimize risks for children. However, it is submitted that each VSPS should be obliged to provide simple, clear and comprehensive video instruction tutorials, aimed at parents, to help them understand how such controls work.
- iv. It is the Agency’s view that the proposed online safety codes must be underpinned by a commitment to upholding children’s rights, including their right to safety and protection online. This Agency would also ask that consideration is not just given to the *risk*, but also the *impact of the harm*, on any individual child.

Irish Literature Review – High Levels of Online Risk to Children

This Agency continuously reviews literature, produced, and published in the area of child protection. There has been much research into children’s safety online. Some of which has been reviewed, by this Agency, in preparation for this submission. It will come as no surprise, that this research tends to unanimously find, that the risks posed to children online, are truly profound.

Some of the most salient reports, and their resultant findings, are as follows: -

1. *Coimisiun na Mean* itself, has commissioned such research, and published same, in contemplation of the within draft safety codes.²¹ This research noted as follows: -
 - i. Online risks to children, tends to fall within the following 4 broad categories:-
 - Offences relating to viewing, production and distribution of CSA.
 - Crimes regarding incitement of offences against children.
 - Live streaming CSA, or exploitation.
 - Online grooming.
 - ii. The research findings also noted concerns in respect of an increase in self-generated material and under reporting of abuse online. The trauma of images being re-shared, alongside the permanent nature of these images, can cause further risk to any child.
2. This Agency also reviewed recent publications undertaken by organizations working in the area of child protection. The *ISPCC*²² and *CARI*²³ both undertook research on this subject and found that almost a *fifth of 9–17-year-olds*, had seen sexually explicit content in 12 months before survey.
3. Between, December 2019 and October 2020, the *National Advisory Council for Online Safety* found that 18% of children aged 9-17yrs, reported seeing sexual images online in the past 12 months.²⁴ Of note, there were significant differences between varying countries, as to children’s exposure to sexual images online. For example, in France there was a reported 4% viewing rate, whereas, in Serbia, the rate was 28%. (It is this Agencies view, that these findings may require further exploration, in terms of actions to keep children safe, given that some countries appear to have better success than others).
4. In respect of bullying, the *CyberSafe Kids Survey (2021-2022)*²⁵ found that 28% of Irish children, reported experiencing some form of online bullying, with most occurrences in chat or messaging groups.
5. In 2020, the *National Advisory Council for Online Safety*, reported that 26% of children had seen harmful online content relating to eating disorders. There is a well-established link between body dissatisfaction and eating disorders. Startling statistics, provided by the

²¹ https://www.cnam.ie/wp-content/uploads/2023/12/Draft_Online_Safety_Code_Consultation_Document_Final.pdf

²² Irish Society for Prevention of Cruelty to Children <https://www.ispcc.ie/>

²³ Children at Risk In Ireland. (CARI) <https://www.cari.ie/>

²⁴ <https://www.gov.ie/en/publication/ebe58-national-advisory-council-for-online-safety-nacos/>

²⁵ https://www.cybersafekids.ie/wp-content/uploads/2023/08/CSK_Data-Trends-Report-2023-Sept-5.23-.pdf

*Health Research Board*²⁶, demonstrate that eating disorders represented 18% of all psychiatric and hospital admissions for children under 18 years, in 2020.

6. Other reports noted concerns in respect of the growing rates of self-harm and suicide amongst children and young people in Ireland. This is reflected in the Agency experience of the increase of referrals for children with these profiles. We note the findings of the *NACOS* survey²⁷ and the *UK NSPCC survey*²⁸. The latter, revealing that certain social media platforms, *scored most highly for exposing children to suicide related content/videos*.

There can be no doubt, that the online space is not a safe place for children. Into this space, *Coimisiun na Meán*, and the within draft codes, are a welcome relief. The arrival of online rules, to protect children, where once there were none can only be a positive development.

We simply urge the Commissioner, to consider the foregoing statistics, together with the within submissions, and tailor these new and exciting codes, accordingly.

Introduction

Age Action is the leading advocacy organisation on ageing and older people in Ireland. We advocate for a society that enables all older people to participate and to live full, independent lives, based on the realisation of their rights and equality, recognising the diversity of their experience and situation.

Relevant to much of our work in numerous areas, Age Action is deeply concerned about the challenges emerging for older persons in an increasingly online world. These challenges include remaining socially and culturally included, retaining autonomy and privacy, protecting incomes, and ensuring access to services and supports. These challenges also create safety risks for older persons, and this submission describes the measures that need to be taken to best place older persons to navigate digital platforms safely.

Online Safety of Older Persons

“Even trying to get into contact with people, how do you do it anymore?”

Many older persons (almost 300,000 people aged 60 or older) were not using the internet at all in 2022. When people not using the internet are combined with those with below basic digital skills, they represent more than 6 in 10 people aged 60 or older (628,000 out of one million). Digital exclusion is a specific manifestation of the broader problem of social exclusion, where people aren't able to participate in or contribute to culture and public debate, do not have access to useful information and supports, and ultimately are rendered more vulnerable to mistreatment and exploitation. Digital exclusion includes situations where someone uses the internet, just not safely or with adequate skills.

The push towards digital can be so insistent that people feel obliged to become active online, even if they are ill equipped to do so. With the drive for many activities to be done online, many older people are forced to either take risks with their personal data, or else rely on others who are more digitally literate. Reliance on others can reduce a person's autonomy and often requires sharing confidential or private information with others, whether they are family, friends or professionals. Thus it can create disempowering relationships of dependency and it can heighten the risk of financial abuse.

A concern in relation to inadequate digital skills is that people with a basic level of skills are more susceptible to fraud and other criminal activity online, which are increasing in both frequency and sophistication.

While more people are going online, they are not all acquiring the skills to stay safe from fraudulent practices. Large numbers of people experience online fraud on an annual basis. A Eurobarometer survey found that more than one in eight people (13%) have experienced internet fraud and one in 11 (9%) have experienced identity theft.¹

A special Eurobarometer report published in January 2020 examined public concern about cybercrime.² Across Europe, just over half of respondents (52%) feel well informed about cybercrime, but only 11% feel very well informed. Three quarters (76%) believe that the risk of becoming a victim of cybercrime is increasing. However fewer (52%) think they can protect themselves sufficiently against it – and this represents a decline of nine percentage point since 2018. Only a minority in each country are aware of official channels for reporting these crimes.

Irish respondents were ranked fifth highest (at 53%) among those who “are concerned about someone misusing their personal data” (EU average 48%). Irish respondents were most concerned (at 52%) about the security of online payments (EU average 41%). Yet Irish respondents were among the lowest ranked (at 38%) for changing their behaviour online due to security concerns. More than a third (37%) of Irish respondents felt “not well informed” about the risks of cybercrime (EU average 47%).

Across the Eurobarometer survey data, older people are generally less trusting or feel less informed than younger people. Recent CSO data shows that people aged 60-74 were least likely of all age groups to undertake personal data management actions, such as checking that a website was secure or refusing use of their personal data for advertising.³

Financial fraud and abuse are significant issues facing older persons in Ireland and are likely to be under-reported, especially when family members are involved and, unfortunately, family members are the most common offenders. In the last HSE National Safeguarding Office annual report (2021), over 800 cases of financial abuse of someone aged 65+ were reported.⁴

The push to digitalisation often leads to a situation where older persons rely on family members, neighbours, volunteers or others to assist them, which can involve sharing

¹ <https://www.irishtimes.com/business/technology/13-of-irish-internet-users-have-suffered-online-fraud-1.209978>

⁴ <https://www.hse.ie/eng/about/who/socialcare/safeguardingvulnerableadults/national-safeguarding-annual-report-2021.pdf>

passwords and PINs as well as divulging private information such as date of birth, PPSN and bank details. Well-meaning frontline staff sometimes go as far as to encourage older persons to ask their children to help them. While this may be a person's preference in some cases, often it is not, and in too many cases there is a real risk of financial abuse occurring.

The evidence suggests that many older people lack confidence and competence online, which either leaves them unsafe during digital activities, or which restricts the range of digital activities that they are willing to engage in.

Recommendations

A significant part of solving the problem of digital exclusion of older persons will be improved access to training for digital skills, building on models like Age Action's own Getting Started programme. Beyond that, and more relevant to the Draft Code, Age Action has two recommendations to improve the online safety of older persons. Firstly, complaints mechanisms ought to have offline options where possible, such as phone lines or physical addresses. This is in recognition of the fact that digital skills are varied and possessing skills in one area does not guarantee possessing them in another. People who encounter problems with online services and platforms may not have the skillset to navigate online complaints procedures and this needs to be accounted for.

Age Action is also concerned about media literacy among older persons and the importance of prioritizing them as a target demographic in efforts to improve media literacy. Too often they risk being forgotten in that space. Age Action's endeavours to be intersectional in its work and acknowledges that older persons are not the only demographic that ought to be prioritized; for example, the migrant community and Traveller and Roma communities ought to be reached out to as well. It is likely that the tools and methods appropriate for media literacy training will change depending on the cohort receiving it and those providing the training ought to be cognisant of that. The Safety Code should explicitly reference the need for an intersectional approach to media literacy, and name older persons as a cohort that ought to be prioritized.

Dear Sir / Madam.

Please find attached below our response to the request for input to the draft Code. Thank you for your consideration.

Best regards,

Rob Leslie
CEO

9. What is your view on the requirements in the draft Code in relation to age verification?

RESPONSE: Within the draft Code there is no mention of any international standard being applied for Age Verification purposes. It seems to be left entirely up to the VSPSP to decide how they will do it. This will lead to inconsistent outcomes and potentially catastrophic results as the implementations will not be uniform or have any consistency. The analogy of the Fox patrolling the chicken coop comes to mind if it is left to the platforms to police themselves. Age verification

ISO is currently developing an international standard on Age Verification, ISO27566, and there are 3 delegates from NSAI that will be attending a conference in Manchester from 8-12 April to discuss it. It is my view that the Code should require all platform providers to follow the international standard at a minimum when it becomes available.

In the absence of compliance with a published standard there is a real problem in the Code with respect to privacy when the method of age verification is considered. Having a user present an ID to prove their age is overkill as much more than the fact that the user is over a certain age is actually disclosed. The Code should require that all providers implement privacy enhanced methods of age verification so that no identity data needs to be disclosed other than the fact that the person is indeed over a certain age. This may require an intermediary acting in concert with an authority for identity data to provide the age assertion. However, this is infinitely better than having to provide your most sensitive personal data just to provide your age is over a certain threshold.

We do not believe age estimation is an effective method of proving age especially for children who are within a few years of the age threshold, the very group that is being targeted for protection.

Finally, with the advent of AI it is becoming increasingly easy to present a very high resolution, high quality identity document that is fake and that will show a photo of the presenter. The checks used to validate the document will almost certainly pass scrutiny. If ID documents are to be used to verify identity and therefore age, they should be tested against authoritative source data directly and not solely rely upon the anti-counterfeit features contained within the identity document.

19. What is your view on the requirements in the draft Code in relation to ensuring the personal data of children is not processed for commercial purposes?

Under no circumstances should personal data of children be stored...or adults for that matter... if the necessity for its storage was solely to prove age. It is possible to have a privacy enhanced age verification service that would store only an identification code that is bound to a unique identifier that could be used to verify that a returning user is the same person who initially registered and proved their age. It is not necessary to store any personal data to prove age. This should be the default requirement.

BACKGROUND FROM THE CODE

Age Verification: VSPS providers are required to take effective age verification or estimation measures and establish a mechanism for evaluating their effectiveness. Robust age verification (and an equivalent mechanism for evaluating its effectiveness) is required in certain cases. Providers are required to report on the effectiveness of the mechanisms adopted.

Age Verification

11.16 Where a video-sharing platform service provider has a minimum age for account opening, it must implement effective measures to detect under-age users and close their accounts. Such measures may be applied at account opening or subsequently and can be achieved using age estimation, or age verification, as appropriate, or by other technical measures. Self-declaration of age by users of the service shall not on its own be an effective measure for the purposes of this section.

11.17 Video-sharing platform service providers shall implement effective measures to ensure that content rated as not suitable for children cannot normally be seen by children. Such measures shall be applied either on account sign-up for the service or on each occasion such content is accessed, and can be achieved using age estimation, or age verification, as appropriate, or by other technical measures. Self-declaration of age by users of the service shall not on its own be an effective measure for the purposes of this section. Where content containing violent or distressing imagery has been uploaded or shared as a contribution to civic discourse on a matter of public interest, placing the content behind a content warning would be an effective measure for the purposes of this section.

11.18 Video-sharing platform service providers shall establish a mechanism to (i) describe the age verification, age estimation or other technical measures used; (ii) describe the way in which the measures are used to restrict access to the service(s); (iii) set targets for the number of children (in different age ranges determined by the service provider) who are wrongly identified as adults through the service provider's age verification, age estimation or other technical measures; (iv) evaluate the accuracy and the effectiveness of their age estimation systems, age verification systems, or other technical measures, including whether the mechanisms used have enabled the service provider to reach the targets set under (iii); and (v) using surveys or other means, estimate the number of users who are children using their service.

11.19 Video-sharing platform services of which the principal purpose of the service or a dissociable section thereof is providing access for adults to:

- content consisting of pornography, or
- content consisting of realistic representations of, or of the effects of, gross or gratuitous violence or acts of cruelty,

shall use robust age verification either for (i) account sign-up for the service or for accessing the dissociable section of the service providing access to such content; or (ii) on each occasion such content is accessed.

11.20 Video-sharing platform service providers to whom section 11.19 applies shall establish a mechanism to (i) describe the robust age verification used; (ii) describe the way in which the measures are used to restrict access to the service(s); (iii) set targets for the number of children (in different age ranges determined by the service provider) who are wrongly identified as adults through the service provider's age verification mechanisms; and (iv) evaluate the accuracy and effectiveness of the robust age verification systems they implement in compliance with that section, including whether the mechanisms used have enabled the service provider to reach the targets set under (iii).

11.21 Video-sharing platform service providers shall provide a report on the accuracy and effectiveness of age estimation mechanisms, age verification mechanisms or other technical measures arising from the evaluation

undertaken under sections 11.18 and 11.20 to the Commission every three months from 1 January each year, in the manner specified by the Commission from time to time.

3.6.2 Children's Personal Data

Complying with the Code may require the collection of children's personal data for the purposes of implementing age verification and parental controls. In line with the provisions of the AVMS Directive, the Code prohibits the processing of such data for commercial purposes. Coimisiún na Meán notes that the provisions of the General Data Protection Regulation ("GDPR") and the Data Protection Act 2018 will also apply to such personal data.

I wish to object to the proposed code and age verification process on the following grounds (I refer to the code generally rather than any specific section):

The proposal will result in citizens having to upload sensitive data to third parties to use websites many of which have very poor histories of protecting user data but which often play a keep role in modern democratic life e.g. Meta (Facebook), X (Twitter).

I believe that Irish Citizens should have the right to browse the internet anonymously and I am oppose to the age verifications as it should be a parents responsibility (and right) to manage their children's use of the internet and social media. However, were age verification to be introduced, a better way of implementing this would be to ban individual websites collecting passports/doing live selfies etc and instead sell online access passes in shops with scratch-off codes that allow you to access mature content. That way the shops can verify that you are old enough to buy a code but citizens remain anonymous to the website they are using and don't have to upload sensitive data.

It will have a chilling effect on small independent websites, especially those which allow user generated content which will lead to stagnation in innovation and increased domination of the major companies who can afford the resources necessary to comply, and also have a negative effect on democracy.

It is the responsibility of parents to manage what their children view not the government.

The implementation of this could result in teenagers being unable to access medical information as the content may be inappropriately flagged by AI.

Legitimate criticism of government policy in relation to sensitive areas (immigration, diversity policies, traveller accommodation etc.) will be labelled as sensitive or hateful content and will thus be censored or at least hidden behind an age verification wall. We have seen in the US how politicians and senior civil servant have worked with the major internet corporations to censor, "shadow ban" or label as "misinformation" users and user generated content which is critical of them; and that is in a country with a strong tradition of protecting free speech. These measures can and will be used to censor dissenting voices and those critical of the governments corruption and incompetence. While you may be quite happy to have these tools at your disposal now have you considered what it might be like if someone who you are ideologically opposed to were to come to power? They may use the very same tools to censor, for example, pro-LGBT content on the grounds of protecting children, as has been the case in Hungary.

*Since our establishment in March this year, developing an Online Safety Code has been a key priority for Coimisiún na Meán. Many of you have helped us in this process. We received hugely informative responses to our call for inputs over the summer. I have also had the privilege of **meeting representative organisations** who shared experiences of being harmed by content or behaviour online, including those representing children, parents, Irish Travellers, the LGBT+ community, women and migrants. I would also like to thank the organisations who shared their expertise relating to online harms such as content promoting suicide, self-harm, sexual assault, misogyny, eating/feeding disorders, cyber-bullying, incitement to hatred and violence, racism, child sex abuse material and non-consensual intimate image sharing.*

Finally, why are the views of unelected, unaccountable "representative" organisations (how are they representative if the people they supposedly represent can't vote for them?) been given priority over ordinary citizens in a democracy. Surely in a democracy the views of individual citizens should be given more weight than self-appointed state funded activists?

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit **feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures** for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by **removing the "whether and"** in the sentence *"In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them"*, you **would clarify that the eight measures listed are the mandatory minimum** and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. **Please make it as robust as possible.**

Kind regards,

Eoin DUBSKY

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Sent from my iPad

Dear Coimisiún na Meán

I write concerning Ireland's Online Safety Code public consultation.

In particular, I would like to submit feedback, see below, relating to item "1.3: Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code.

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the words "whether and" in the sentence, "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them" you would clarify that the eight measures itemised are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, whilst the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children - or any person whose age is unproven - to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Many thanks, and kind regards,

Carol Fulton

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

M Eugene Uys

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Chris Ogilvie

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Dear Coimisiún

In the context of Ireland's Online Safety Code public consultation, I am reaching out to address the aspect of "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code. I would like to provide feedback, emphasizing the need to eliminate any loopholes or ambiguity within this section that video-sharing platform services could exploit. Specifically, by removing the phrase "whether and" from the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them," it becomes clear that the eight listed measures are the mandatory minimum, allowing platforms to include additional measures. Without this modification, video-sharing platform services may continue with business as usual, leaving others to bear the consequences.

Coimisiún na Meán has the potential to significantly contribute to corporate accountability by maintaining a steadfast stance and resisting pressure from the platforms. These platforms should not be involved in constructing detailed profiles of children or individuals with unverified ages, only to manipulate them for profit. The proposed adjustments in Section 1.3 of the draft supplementary measures could play a crucial role in preventing platforms from artificially amplifying hate, hysteria, suicide, and disinformation. Additionally, it has the potential to encourage internet innovation that prioritizes people over profits. I urge you to strengthen this section as much as possible.

Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation. Please excuse my use of a pre-written mail, but it says what I want you to hear and I certainly couldn't do it better!

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. For example, by removing the "whether and" in the sentence "In preparing a commender system safety plan, a video-sharing platform service provider must, at a minimum, consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost. Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and RESIST PRESSURE FROM THE PLATFORMS! They have NO BUSINESS building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Chris Betts (Mrs)

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online safety code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Vincent Randy

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

As an overview I think this is a very important ProSocial action and when successful should be taken up by countries around the world.

As a physician I would say that while children are not small adults, lots of adults are small children and need to be protected in the same way as children. Many people carry "trauma" and viewing content that is triggering can be devastating. Just indicating your date of birth does not imply protection from harm. I don't know the solution to this but there may be ideas in all of the consultation materials and feed-back that you have gathered.

I agree with the pre-written content that any loopholes or ambiguity from Section 1.3 which could be used by video-sharing platform services to carry on business-as-usual, while the rest of us pay the cost should be removed. will leave it to the intelligent proof-readers to give you the details.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Again, thank you for your ProSocial work which will make the world a better place to live for everyone.

Kind regards,

hay ċ x^w qə,

Doug

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

martine Moinecourt

Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children - or any person whose age is unproven - to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Your enlightened actions and lead on this extremely important matter are an example to other countries to act similarly - children and vulnerable people should not have to be exposed to such terrible exploitation purely for the profits of the big tech companies behind these video-sharing platforms.

Yours sincerely,
Carmel Cowan

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Message

[You don't often get email from [REDACTED] Learn why this is important at <https://aka.ms/LearnAboutSenderIdentification>]

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation. I am excited to see that you are making some inroads into Big Tech's neck hold on society. Truly, you will be an example to the world in doing this. I'm hoping you might also consider removing any loopholes or ambiguity from the "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code. I am concerned that video-sharing platform services will seize any opening.

You could do this, I think, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them". By doing so you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán, you could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children - or any person whose age is unproven - to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,
Anne Skinner

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online safety code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Nell Thomas

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,
Catherine Kelly

Dear Coimisiún na Meán,

Please note that I am adding my ideas to an informed email. Along with others, I am writing to you about Ireland's Online Safety Code public consultation. In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. This is urgent for the safety of all users of the internet.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. This makes a system where children and others will become victims and actual commercial products. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

This is such a simple, but brilliant idea, which could influence other countries to follow Ireland's leadership. Please put it into action.

Many thanks,

Kind regards,

Antoinette Wisbey

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures.

Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Mark DuRussel

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation. I am a psychotherapist working in private practice in [REDACTED]. I have worked in this capacity for over 35 years, and worked in the public sector in first responder roles as a social worker for a number of years before that. For over 40 years, my work has involved dealing with people who are suicidal, and who have to navigate the difficult internal landscape of suicidal ideation. I work with both adults and young people, so I see the Pervasive impact of social media and its algorithms on people with delicate mental health issues, including suicide ideation, depression, anxiety, and eating disorders.

I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must, at a minimum, consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Marie-Pierre Cleret,
Psychotherapist,
Accredited Mental Health Social Worker,

[You don't often get email from [REDACTED] Learn why this is important at <https://aka.ms/LearnAboutSenderIdentification>]

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Julie Woollard

Dear Coimisiún na Meán,

I am writing about my feedback for Ireland's Online Safety Code public consultation, specifically on "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by taking the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them" without the term "whether and" in, it would be clarified that platforms may add additional measures, with the eight measures being listed as the mandatory minimum. Otherwise, users continue to pay the cost while video-sharing platform services carry on business-as-usual.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible. Thank you for your attention.

Kind regards,

Mathieu Drouin

Dear Coimisiún na Meán

I am contacting you as part of the public consultation about Ireland's Online Safety Code .

In particular, I strongly urge you to please remove any loopholes or ambiguities from "1.3 Recommender System Safety" which could be mis-used by video-sharing platform services to allow the dissemination of potentially harmful material. For example, by removing the words "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services could carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán would make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – in order to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stopping the platforms from artificially amplifying hate, hysteria, suicide and disinformation, and spurring internet innovation that puts people before profits.

Please make it as robust as possible. For our children's sake.

Thank you.

Kind regards
Vivien Smith

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible. Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,
Chloe Brotheridge [REDACTED]

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Jane Magnaldo

Kind regards,
Fredrik Holmberg

**Observations Online Safety Code
Child Rights Policy Unit
24th January 2024**

Contact: Linda O’Sullivan

Overall:

DCEDIY welcomes the consultation document and the opportunity to provide feedback on the draft observations. Overall DCEDIY is very positively inclined towards the Draft Code and the extent to which Comisiún na Meán has engaged with and listened to the concerns of civil society and policymakers.

In line with the UNCRC Article 12, and Young Ireland: National Policy Framework for Children and Young People 2023-2028 all legislation, policy, programmes and services that has an impact on the lives of children and young people must embed the voice of children and young people in decision-making and the development of policy, legislation and research.

It is important that there is reference to and a record of consultation with children and young people that took place to inform the drafting of the code, in whichever support documents are deemed to be appropriate.

Meaningful engagement should capture the views of a representative cross-section of society, using age-appropriate methodologies. Child-centred language should be at the centre of all policy-making concerning children and young people.

As previously offered, DCEDIY remains at the service of Comisiún na Meán in providing support in the design and development of consultations and other ways in which the views of children and young people can be sought in the draft Code.

Consultation on Online Safety Code

1. Do you have any comments on sections 1 - 9 of the draft Code?

Overall positive feedback on this section of the Draft Code.

Small Observation:

Heading 3 Purpose, Preparation and Application of the Code

Point 3.6 Would welcome the inclusion of children here – ‘including children and young people’

2. What is your view on the proposal to include user-generated content that is indissociable from user-generated videos in the definition of content to be covered by the Code?

Very strongly support the inclusion of user-generated content that is indissociable from user-generated videos in the definition of content to be covered by the Code. Content that may be harmful that is indissociable from video content that may not be harmful, still has equal potential to cause harm to children and young people on all the grounds cited in the code.

3. What is your view on the definitions of “illegal content harmful to children” and “regulated content harmful to children”?

Welcome the robustness and flexibility of the definitions.

Small observation:

Point 10: audiovisual commercial communications harmful to children;

There seems to be a word missing in the following phrase:

“audiovisual commercial communications which or unreasonably show children in dangerous situations”

4. What is your view on the other definitions of illegal content and regulated content?

Nil obs

5. Do you have any comments on any other definitions provided in the draft Code?

Nil obs

6. What is your view on the obligations in the draft Code that relate to what a VSPS provider must include in its terms and conditions?

Welcome the robustness of the terms and conditions obligations.

7. What is your view on the requirement in the draft Code for a VSPS provider to suspend or terminate an account in certain circumstances?

Welcome the obligation on VSPS providers to suspend or terminate accounts repeatedly infringing terms and conditions as set out.

8. What is your view on the requirements in the draft Code in relation to reporting and flagging of content?

Point 11.11 Request that the Code specify “child-friendly where the user is a child” mechanisms to report or flag harmful content harmful to children.

Point 11.12 Requests that the Code specify that the explanation to users is “in a child-friendly manner where the user is a child”

Point 11.13 Requests that the Code specify “child-friendly complaint mechanisms, where the user is a child”

9. What is your view on the requirements in the draft Code in relation to age

verification?

Support the robust and flexible age verification measures set out in the draft Code.

10. What is your view on the requirements in the draft Code in relation to content rating?

Welcome the code's provisions in relation to content rating. Request that the Code specify that content rating should be "child friendly" for children and young people themselves to make informed decisions about what they can access.

11. What is your view on the requirements in the draft Code in relation to parental controls?

Welcome the draft code on parental controls, the inclusion of live-streaming control systems, their transparent and being offered at point of sign up parental controls

12. What is your view on the requirements in the draft Code in relation to complaints?

Strongly recommend the inclusion of Child Friendly complaints mechanisms within the scope of the code. Otherwise generally support the requirements.

13. Do you have any other comments on the requirements in section 11 of the draft Code?

Strongly support the Commission in considering a consistent system of content rating to come within the scope of the code. Otherwise generally support the requirements.

14. What is your view on the requirements in the draft Code in relation to audiovisual commercial communications which are not marketed, sold or arranged by the VSPS provider?

Generally welcome the requirements to include communications which are not marketed, sold or arranged by the VSPS provider in the code.

Point 12.1 Recommend inserting "including to child users"

Point 12.9.2 Recommend inserting after users "including child-friendly mechanisms for child users"

15. What is your view on the requirements in the draft Code in relation to audiovisual commercial communications which are marketed, sold or arranged by the VSPS provider?

Point 12.6 Recommend inserting "including to child users"

16. What is your view on the requirements in the draft Code in relation to user declarations that user-generated content contains an audiovisual commercial communication?

Welcome the requirement. Request specific reference to child users, suggested wording below:

Point 12.11 Recommend inserting “including where relevant, child users”

17. Do you have any other comments on the requirements in section 12 of the draft Code in relation to audiovisual commercial communications?

Nil obs

18. What is your view on the requirements in the draft Code in relation to media literacy measures?

Welcome the requirements. Request specific reference to child friendly media literacy measures and tools developed with the key concerns of children and young people in mind, from evidence available on issues such as body image, and in consultation with children and young people.

19. What is your view on the requirements in the draft Code in relation to ensuring the personal data of children is not processed for commercial purposes?

Welcome the robustness of the requirements.

Point 13.1 Suggest insertion of “including child users”

Point 13.3 Strongly support that children’s data is not processed for commercial purposes including marketing, profiling and behavioural targeted advertising.

20. What is your view on the requirements in the draft Code in relation to reporting in relation to complaints?

Welcome the requirements

21. Do you have any other comments on the requirements in section 13 of the draft Code?

Nil obs

22. Do you have any comments on this section of the Draft Code?

Nil obs

23. Do you have any comments on the Annex?

Nil obs

24. Do you have any other comments on any section or aspect of the draft Code,

including with reference to section 139M of the Act in relation to the matters the Commission is required to consider in developing an online safety code?

As set out above, in line with the UNCRC Article 12, and *Young Ireland: National Policy Framework for Children and Young People 2023-2028* all legislation, policy, programmes and services that have an impact on the lives of children and young people must embed the voice of children and young people in decision-making and the development of policy, legislation and research.

Additionally, due regard to the full rights of children in digital spaces should be considered in the drafting of the Online Safety Codes through a Child Rights Impact Assessment Process.

Consultation on Statutory Guidance

25. Do you have any comments on this draft Guidance, including in relation to the matters required to be considered by the Commission at section 139ZA of the Act?

Nil obs

Consultation on the application of the Code to the category of video-sharing platform services

26. Do you have any comments on the proposed application of this draft Code to the category of video-sharing platform services?

Nil obs

27. Do you have any comments on the proposed application of this draft Code to named individual video-sharing platform services?

Nil obs

Proposed Supplementary Measures and Related Guidance

28. Is there anything you consider the Commission needs to be aware of in relation to the draft supplementary measures and draft supplementary guidance as it further develops its thinking in these areas and seeks to effectively fulfil its mandate in relation to online safety?

1. Draft Supplementary Measures for inclusion in the Online Safety Code

1.1. Safety by Design –

We strongly recommend Safety by Design being incorporated into the Online Safety Code . As outlined in DCEDIY's previous submission we support the proposed requirement to prepare a "Safety Impact Assessment" whenever services are being developed or enhanced, with sign-off of the risk assessment and proposed mitigation measures by an executive staff member of the VSPS provider with appropriate experience and responsibilities.

Furthermore, we strongly recommend a Child Rights Impact Assessment process to be incorporated into the safety by design process.

The UN Committee on the Rights of the Child is explicit in its identification of child impact assessments as an essential tool in implementing the Convention.

UNCRC Comment 25 38 States parties should require the business sector to undertake child rights due diligence, in particular to carry out child rights impact assessments and disclose them to the public, with special consideration given to the differentiated and, at times, severe impacts of the digital environment on children.

DCEDIY is currently examining the implementation of Child Rights Impact Assessments on all policy making, legislation and programme design that will have an impact on children's lives. This will inform an exploration of how Child Rights Impact Assessments (CRIAs) can embed a children's rights approach, and the development of a prototype CRIA and training supports aimed at embedding children's rights.

The UNCRC sets out furthermore requirements in relation to safety by design in the specific context of avatars and we request that any Safety by Design measures take due consideration of this:

UNCRC Comment 25 77 Many children use online avatars or pseudonyms that protect their identity, and such practices can be important in protecting children's privacy. States parties should require an approach integrating safety-by-design and privacy-by-design to anonymity, while ensuring that anonymous practices are not routinely used to hide harmful or illegal behaviour, such as cyberaggression, hate speech or sexual exploitation and abuse. Protecting a child's privacy in the digital environment may be vital in circumstances where parents or caregivers themselves pose a threat to the child's safety or where they are in conflict over the child's care. Such cases may require further intervention, as well as family counselling or other services, to safeguard the child's right to privacy.

- 1.2. **Online Safety Supports** - strongly recommend Online Safety Supports being incorporated into the Online Safety Code in order to mitigate any potential harm experienced by children and young people online.

Please note the following in relation to consideration of exemption for parental consent in the case of online safety supports:

UNCRC Comment 25 77 Providers of preventive or counselling services to children in the digital environment should be exempt from any requirement for a child user to obtain parental consent in order to access such services.³⁸ Such services should be held to high standards of privacy and child protection.

- 1.3. **Recommender System Safety** – very strongly recommend the Recommender System Safety being incorporated into the Online Safety Code It is vital that aggregate content which could cause harm to a child or young person is interrupted/mitigated

- the obligation on all platforms to provide transparency about how recommender systems operate and to make it easy for users to modify their choices when they have more than one option; and

Ensure that this is child friendly when the user is a child.

- provide users with at least one option that is not based on profiling
- Ensure that these options are child-friendly when the user is a child

As set out in General Comment 25 of the UNCRC

The following specific concerns in relation to automated recommender processes in relation to how they impact on children's rights are set out by the UNCRC:

UNCRC Comment 25 10 ... discrimination can arise when automated processes that result in information filtering, profiling or decision-making are based on biased, partial or unfairly obtained data concerning a child.

Privacy:

UNCRC Comment 25 40 ... the processing of personal data that may result in violations or abuses of children's rights, including through advertising design features that anticipate and guide a child's actions towards more extreme content, automated notifications that can interrupt sleep or the use of a child's personal information or location to target potentially harmful commercially driven content.

UNCRC Comment 25 42. States parties should prohibit by law the profiling or targeting of children of any age for commercial purposes on the basis of a digital record of their actual or inferred characteristics, including group or collective data, targeting by association or affinity profiling. Practices that rely on neuromarketing, emotional analytics, immersive advertising and advertising in virtual and augmented reality environments to promote products, application services should also be prohibited from engagement directly or indirectly with children.

Freedom of Thought, Conscience and Religion:

UNCRC Comment 25 61 States parties should ensure that uses of automated processes of information filtering, profiling, marketing and decision-making do not supplant, manipulate or interfere with children's ability to form and express their opinions in the digital environment.

UNCRC Comment 25 62... design standards that identify, define and prohibit practices that manipulate or interfere with children's right to freedom of thought and belief in the digital environment, for example by emotional analytics or inference. Automated systems may be used to make inferences about a child's inner state. They should ensure that automated systems or information filtering systems are not used to affect or influence children's behaviour or emotions or to limit their opportunities or development.

2. Draft Guidance Materials to support the proposed Supplementary Measures

Point 2.1 Safety by Design –

See above in reference to the recommendation for a Child Rights Impact Assessment Process to be incorporated into the safety by design process.

Point 2.2 Online Safety Supports

We strongly support online safety supports designed for children, particularly schools, charities and NGOs, funding initiatives, engagement with local authorities. We request that specific reference to child friendly and available to children be referenced in the Draft Guidance Materials

Additional Observations from DCEDIY Child Rights Policy Unit on the Consultation Document/Draft Online Safety Code

Child Rights Impact Assessment

A Child Rights Impact Assessment should be carried out as part of the implementation of the Online Safety Code overall, looking specifically at the likely impacts it will have on children.

Youth Advisory Committee

Clarification is requested on the exact make-up of the proposed Youth Advisory Committee. The initial reference to this committee (p. 5) states that it will seek representation from young people who are 25 years of age or younger, or of not more than 25 years of age. However, when the committee is referenced in the Annex (p.26), this refers to half of the members being under the age

of 25. The Department would welcome a focus on those aged 0-24, to align with the forthcoming policy framework for children and young people.

Child Friendly Version of the Online Safety Code:

Action 14.4 in Young Ireland: National Policy Framework for Children and Young People 2023-2028 requests that all departments and agencies Publish child-friendly versions of policies and strategies which are relevant to children and young people, for various age groups. A child-friendly version of the Code as relevant to children should be developed for this reason. DCEDIY and Hub na nÓg is available to support this work.

When VSPS providers design and implement online safety features for their platforms, they should ensure they are all fully available in a child-friendly format, so that all internet users, whatever their age, can report content in violation of the code.

Child Rights Training:

As also set out in Young Ireland: National Policy Framework for Children and Young People 2023-2028 DCEDIY will develop training for public servants and wider society to understand and realise the rights of children and young people across the lifetime of the Policy Framework. This will be tailored to ensure that the training is applicable and relevant to different sectors and different professions. This will include the development of training for interested members of the private sector and individuals, to be published and made available online.

DCEDIY would welcome reference to this training (currently under development) and encouragement of providers of digital content for children to take part in this training as part of the guidance materials accompanying the Code.

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Mark Leigh

Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Arensha Garrison

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

I fully support this request.

Kind regards,

Mandy Baldwin

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation. In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. For example, by removing the "whether and" in the sentence "

In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person of any age – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits.

Please make it as robust as possible.

Thanks and best wishes,

Jan Draper, [REDACTED]

Dear Coimisiún na Meán, I am writing to you about Ireland's Online Safety Code public consultation. In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost. Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible. Kind regards,

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible. Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

[REDACTED]

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation. In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Karen Peterson

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Message

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,
Jana Hummer

“regulated content harmful to the general public” means: - content containing incitement to violence or hatred directed against a group of persons or a member of a group based on any of the grounds referred to in Article 21 of the Charter of Fundamental Rights of the European Union, namely sex, race, colour, ethnic or social origin, genetic features, language, religion or belief, political or any other opinion, membership of a national minority, property, birth, disability, age, sexual orientation.

There are no exceptions or provisos detailed when limitations on content containing hate speech is restricted, and users accounts etc restricted. That is hugely problematic. Even the heavily criticised Criminal Justice (Incitement to Violence or Hatred and Hate Offences) Bill 2022 contains defences relating to “reasonable and genuine contribution”, in relation to literary, artistic, political, scientific, religious or academic discourse.

This is a startlingly long list of characteristics which proves immensely difficult for users and services to navigate and interpret. One only needs to ponder what “religion or belief” could comprise, "social origin" or “political or any other opinion.”

Without exceptions, and as drafted, it could prohibit and restrict free speech in relation to:-

- The reporting of hate speech
- Fiction depicting hatred speech or violence occurring
- Video of a gamer killing people within the game
- Comedy
- Historical footage
- Education
- History and
- Interviews on controversial topics
- Discussion on matters of public interest

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Giuseppe Pranteda

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

helen wrigley

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,
Peter W Dutch

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost. Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible. Kind regards,

Gerard Gardner

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Sent from my iPad

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, can I suggest that you review paragraph 1.3 of the Draft Supplementary Measures to remove any loopholes or ambiguity. For example, you could remove "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", and clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Filza Chaudhry

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible. cut the crap! It's inhuman!

Kind regards,

NICAM's response to CNAM's public consultation on the Draft Online Safety Code

First of all, the Netherlands Institute for the Classification of Audiovisual Media (NICAM) hereby expresses her gratitude to Coimisiún na Meán (CnM) for providing the opportunity to respond to this consultation. And we can say that after providing our input to the Call for Inputs in September (Cfi), the work done on the code is impressive.

In addition to the input provided to the Cfi, we selected a number of questions to which NICAM would like to stress specific elements or concerns, which we feel could potentially further improve the protection of minors online and safeguard the rights they have.

Selected questions

2. What is your view on the proposal to include user-generated content that is indissociable from user-generated videos in the definition of content to be covered by the Code?

This approach could be beneficial to children's safety as long as the content is being evaluated by means of uniform, scientifically based criteria supervised by an independent body or regulator.

NICAM's expertise lies in the content analysis of Audiovisual content, we know that different content types need different approaches concerning harmfulness to children up to certain ages.

Text, images, videos, interaction all have different capabilities of harming children up to certain ages. Video's and images for instance can be harmful to children from very young ages, starting when basic eye-sight is functioning and understanding of the images developing throughout their childhood. Hence also our recommendations in question 5.

5. Do you have any comments on any other definitions provided in the draft Code?

In the code a child is being defined as anyone under 18. While this makes sense, the code leaves little room for distinction between children in different developmental stages. What is potentially harmful for a 9 year old or 12 year old differs greatly from what is harmful for a 16 or 17 year old (e.g., horror content that does not necessarily include gratuitous violence may be fine for a 16 year old, but is harmful for a 12 or 13 year old).

Furthermore. In regulated content harmful for children risky challenges are covered which is good in our view, however, other well-known and well-studied health risk behaviors (particularly substance use) are not. It is stated that "Other types of content harmful to children were raised by a few respondents to the call for inputs. *These include content that encourages the consumption of alcohol or illegal drugs, and exposure to extremist content. Audiovisual commercial communications for alcohol that is aimed specifically at children is prohibited by the draft Code as harmful to children.*"

However: commercial communications for alcohol/ tobacco products that are not aimed specifically at children or that are not commercial (peers smoking/ drinking) would still be potentially (very) harmful for children, these should be included in our view. Furthermore, social media platforms also contain non-commercial content that encourages the consumption of alcohol, illegal drugs, tobacco, vaping etc. These also, should be included since they pose big health risks to children. Especially since creators on VSPS are considered by children as super peers which enhances the impact of what they do or say even more than the mere attraction to this kind of risk behavior during their teenage years.

Scientific backgrounds:

[Viral Vaping: A systematic review and meta analysis of e-cigarette and Tobacco-Related social media content and its influence on youth behaviours and attitudes - ScienceDirect](#)

[User-generated content and influencer marketing involving e-cigarettes on social media: a scoping review and content analysis of YouTube and Instagram | BMC Public Health \(springer.com\)](#)

6. What is your view on the obligations in the draft Code that relate to what a VSPS provider must include in its terms and conditions?

The terms and conditions prescriptions do not include an obligation for users to rate their productions. This is something we would advocate in order for the age ratings to be taken seriously on these platforms. As mentioned in our previously provided input, rating content and the showing of national age ratings should be an integral part of these services.

Something else what stood out for us is that the general responsibilities for the protection of minors are given to users and parents by having to include that:

- children cannot use the service under a certain age
- adult users are not allowed to share their accounts with children
- technical measures should prevent them from accessing

This poses a lot of risks, especially since we know that children are very capable of finding different way to access platforms despite technical protection measures or Terms and Conditions.

Generally speaking the code leans very much on the technical protection measures provided by the platforms. These will be a black box and access to camera/ data/ privacy sensitive information will be needed in many cases. Which is an unwanted situation especially where children are concerned.

The code is mainly focused on defining 18+ content and creating 18+ accounts with terms and conditions. However, this seems to put a lot of the responsibility on the user and relatively little responsibility with the platforms with regard to providing content information / warnings. Setting up age verification techniques at 18 years, will not stop children from using these platforms and we should take this into account.

Therefore, we think that making VSPS a safe place until you can identify yourself being 18+ would be the preferred solution here. This should in our view be combined with the deliverance of content information on the platform in the form of age ratings and content advice to enable children to make their own, informed decisions. This should be information that they can trust. Generated based on uniform (scientific) criteria, provided in easy to understand information on the platforms and monitored independently. Preferably by a non-profit organization that has their best interests at the core of their business.

8. What is your view on the requirements in the draft Code in relation to reporting and flagging of content?

NICAM's experience with this is that an independent organization overseeing a flagging and/ or complaints procedure, including the obligation to publish decisions made (for transparency), is in the public interest and strengthens the reliability of the method or system.

Within NICAM/ Kijkwijzer we are working with an independent complaints board to deal with complaints from the public. After a decision has been made by this board, it is published on our public website and sanctions can be imposed based on the outcome.

In general we can say that from our experience we can strongly advise to create a system where the requirements, timelines and potential sanctions are clear and transparent combined with a means of escalation in the form of independent complaints board followed by an appeals board and publication of decisions.

9. What is your view on the requirements in the draft Code in relation to age verification?

VSPS should, in principle, be a safe place for children. This means that content rated higher than All ages would not be accessible without an account (parent and or child), parental controls and potentially age verification. When certain (back catalogue) content has not been rated, it should not be accessible for kids (i.e., treated the same as content with the highest age rating). When profiles are not logged in, only content suitable for all ages should be accessible. For this approach, it is necessary that all content gets rated (e.g., by uploaders during the uploading process) and parental controls and age verification (for adults) is in place.

We would strongly recommend to not suggest automated systems for age estimation in the code. We see two major issues with those: firstly the users are being made responsible and secondly it offers additional major risks in relation to privacy and reliability.

Children are very inventive when it comes to technical protection measures preventing them from accessing the content they would like to access. From our experience and research we can say that we do not believe that age verification will lead to children not using their favourite platforms. They will find ways to access them as they do now leading to serious and harmful situations.

Therefore, acknowledging that children are accessing these platforms and taking their safety serious without impacting their privacy would be our strong suggestion. Rather we would advise empowering them and their parents to enable them to make an informed decision. We believe that this can be done by informing them by means of ages content ratings and content descriptors (see question 10) and linking these to parental controls.

10. What is your view on the requirements in the draft Code in relation to content rating?

NICAM is happy to see that content rating requirements are included in the code. In our view age ratings combined with content advise, as advised in the AVMSD, forms the basis for almost all protection measures. It empowers children and parents by providing additional information on which they can base their viewing decisions. Access to this kind of information is seen as a basic children's right:

Children have the right to get information from the Internet, radio, television, newspapers, books and other sources. Adults should make sure the information they are getting is not harmful. Governments should encourage the media to share information from lots of different sources, in languages that all children can understand.

Source (Unicef): <https://www.unicef.org/child-rights-convention/convention-text-childrens-version>

The code seems to leave the specifics of content rating very open and up to the platforms. We argue to be more specific in the requirements regarding objective content ratings and place more responsibility on the platforms, as well as requiring them to work with us and facilitate the showing of our ratings and pictograms on their platforms. Preferably a uniform rating system applicable to all VSPS available to children in the EU.

11.22 states: *The content rating system shall enable users to rate whether the content is appropriate for children and shall enable users to suggest the age(s) of children for whom the content is appropriate, or inappropriate, as the case may be.*

However, it is unclear what users or platforms should base those suggested ages on. It is unlikely that users will have adequate knowledge on children's development in relation to media and potentially harmful media effects to properly make such decisions or recommendations. The same may be said for VSPS themselves, who on top of this may also have commercial interests.

For content ratings to be valuable and trusted by the users (children and parents) on the VSPS the content rating system must deliver age ratings plus content labels based on uniform (scientific) criteria.

As with food ingredient labels, consumers have the right to this information upfront to be able to make a well informed decision on what to watch.

The AVMSD describes age labelling and content advise as an obligation. This is not reflected in this version of the code. We would strongly advise for these to be included as an obligation also for the regulated content and also for ages under 18 since we know that younger children are using VSPS.

NICAM strongly advises to include in the code an obligatory cooperation of the VSPS with national regulators and rating bodies on age rating requirements and to facilitate these national systems on their platforms. The task of creating a (preferably universal) rating system for VSPS can then be taken up by independent regulators/ bodies like NICAM with the sole aim of the protection of minors.

We advise to create a universal system which has the potential to create a levelled playing field for the protection of minors on all VSPS in the EU to prevent unwanted effects that could occur due to commercial motives. We advise to take one universal approach. These unwanted effects could include competition between EU memberstates or VSPS on the level of protection on their platforms or in regulation.

11.23 states: That platforms "*shall ensure that the system adopted is objective*" but also remains unclear on what this should entail. This could mean that each platform could come up with their own content rating systems, based on their own (potentially commercially driven) preferences which could essentially become a black box.

For users, an objective and consistent (universal) third party rating system that is transparent and based upon media effect studies and developmental psychology is essential. This is also touched upon in the guidance on page 68/69. We very much appreciate the referral to NICAM as a national rating system. However, rather than merely advising the use of national rating systems, while a more universal rating system is pending in the guidance, it would seem preferable to include this also in the code. Also since Dutch creator already are obliged to use ratings on their content according to the Dutch Media Act.

11. What is your view on the requirements in the draft Code in relation to parental controls?

From our research we have learned that parental controls are used only for younger children up unto 9 years of age. Therefore, for these measures to be effective, age ratings and content advise for all content, specifically for the content that might be milder but still harmful to this younger group of children (3 – 9), is needed to make these effective.

Parental controls that are not easy to setup or are based on unclear or untrusted ratings/ criteria will most likely not be understood/ trusted by parents and therefore not used. Additionally, we feel it should be an obligation to have the parental controls on by default. Protecting children that are wondering on a VSPS without supervision.

12. What is your view on the requirements in the draft Code in relation to complaints?

See our previous comments on question 8.

19. What is your view on the requirements in the draft Code in relation to ensuring the personal data of children is not processed for commercial purposes?

The need for processing of children’s personal data in general should be avoided at all cost, especially by commercial organizations. A ‘safe by default’ approach would not create a need for processing children’s data, just that of adults, who understand what they sign up to.

Accessing children’s data even when not used commercially, by commercial organisations sounds a bit like telling a child to not touch the cookies on the table. At least, the code should include what happens to the personal data of the children once they turn 18.

Guidance

Age verification

Generally: these technical measures should not be directed at children, storing any of their data while declaring their age. We feel that the potential privacy risks do not outweigh the advantages these measures will have.

Direct these towards adults, by means of payment methods/ id/ tokenised age checking.

Content rating:

Commission may consider at a future date whether to introduce a consistent system to be used by providers.

NICAM strongly recommends to deal with this now and create this consistent and universal system for age rating content and include this in the code.

It now states: Content rating could distinguish between material posted as a contribution to civic discourse or for educational purposes as opposed to material that is intended to entertain, disgust or shock.

How can anyone determine the intention of a certain production? There can be mitigating factors as we distinguish within our rating system, but we strongly advise to make these objective.

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Robin Knight

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Alex Murphy

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Margaret McDonald

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible, and by so doing become a representative example that other nations—like the United States—can be pressured to emulate.

Kind regards,
Jesse Reyes

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online safety code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Message

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation that we are all able to partake in.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

I ask that you please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost, especially the children.

I feel the Coimisiún na Meán would make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible. Thank you for your consideration and for taking action.

Kind regards,
Nancy

These corporations prey on young children and people gullible enough to believe them. The CEOs are paid millions of \$\$\$\$\$ to cause havoc around the world. They are sick people. They need to be stopped. They should not have the right or freedom to spread their filth. They know what they are doing and are laughing all the way to the bank. One has wonder what is the purpose behind all this hate and miss-representation of the truth. The truth is not something they want you to know. They want you to know and believe only what they tell you.

We all must work hard at stopping them. Please make your legislation strong to protect all people from their corporate hate. You must think not of corporate profit but of corporate GREED. Money first and last people never.

Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards, Harold Saunders

Dear Coimisiún na Meán, I am writing to you about Ireland's Online Safety Code public consultation. In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost. Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation. I'm thrilled by the work you are doing to make the internet safer for children!

I'd like to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "*whether and*" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain *whether and* how it has given effect to them", you would clarify that the eight measures listed are the **mandatory minimum** and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Dear Commision na Meán,

I am writing to you about Ireland's Online Safety Code public consultation. In particular, I want to submit feedback about "1.3 Recommender System Safety "in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum, consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost .Commision na Mean could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make It as robust as possible.

Kind regards,
Judy Schneider

Dear Coimisiún na Meán, I am writing to you about Ireland's Online Safety Code public consultation. In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost. Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible. Kind regards,

Cheryl Skinner

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children - or any person whose age is unproven - to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Message

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,
J.S.

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Subject: Public Consultation Submission

[You don't often get email from [REDACTED]. Learn why this is important at <https://aka.ms/LearnAboutSenderIdentification>]

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Sent from my iPad

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

R Hennessey

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online safety code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,
Rhonda Green.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,
Rita O'Sullivan.

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online safety code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. Ambiguity is a tool of ill-intentioned and, often, ill-informed people whose spread of disingenuous content perpetuates and emboldens prejudices and toxic practices around the globe.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

All the best,
Matt

Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,
Sarah Cooper

Dear Coimisiún na Meán, I am writing to you about Ireland's Online Safety Code public consultation. In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost. Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible. Kind regards,

this is important

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation. I'm so glad you are taking action on this serious issue. As a parent of teens, I know how vulnerable they are at the same time as thinking they know it all, and are therefore more vulnerable to algorithms and things out of parental control. Our children have so many more mental health issues, and yet are exposed to such fast moving influences. It is so important that we get this right, and I am grateful that you are attending to this. I hope more countries do it.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Pam Wortley

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,
Barbara Lowe

Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Dear Coimisiún na Meán, I am writing to you about Ireland's Online Safety Code public consultation. In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost. Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible. Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

F Abrahams

Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost. Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible. Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits.

Please make it as robust as possible.

Kind regards,
Georgios Kechagioglou

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation.

In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the online Safety code:

Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,

Sent from my iPhone

Dear Coimisiún na Meán, I am writing to you about Ireland's Online Safety Code public consultation. In particular, I want to submit feedback about "1.3 Recommender System Safety" in the Draft Supplementary Measures for inclusion in the Online Safety Code: Please remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services. For example, by removing the "whether and" in the sentence "In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them", you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost. Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit. Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible. Kind regards,

Dear Coimisiún na Meán,

I am writing to you about Ireland's Online Safety Code public consultation. In particular, I want to submit feedback about *1.3 Recommender System Safety* in the Draft Supplementary Measures for inclusion in the Online Safety Code, requesting that you remove any loopholes or ambiguity from this section which could be seized upon by video-sharing platform services.

For example, by removing the words 'whether and' in the sentence 'In preparing a recommender system safety plan, a video-sharing platform service provider must at a minimum consider the following measures and explain whether and how it has given effect to them', you would clarify that the eight measures listed are the mandatory minimum and that platforms may add additional measures. Without that edit, video-sharing platform services can carry on business-as-usual, while the rest of us pay the cost.

Coimisiún na Meán could make an enormous contribution to corporate accountability if you hold firm and resist pressure from the platforms. **They have no business building intimate profiles about children – or any person whose age is unproven – to then manipulate them for profit.**

Section 1.3 of your draft supplementary measures could go a long way to stop the platforms artificially amplifying hate, hysteria, suicide and disinformation, and to spur internet innovation that puts people before profits. Please make it as robust as possible.

Kind regards,
Ms Deborah Knight.
